**Corpulence.** *s.* Bulkiness of body; fleshiness; fullness of flesh: (used metaphorically in extract).

To what a cumbersome unwieldiness, And burdensome corpulence my love had grown. — *Donne.*

He [Newton] seems to have made a greater progress than all the sects of corpuscularians together had done before him. — *Bishop Hurdley, Sermon, § 245.*

**Corpuscule.** *s.* [*Lat. corpusculum*, diminutive of *corpus* = body. — Though the chief authorities, both old and new, give *corpuscle*, it is submitted that the present is the better form. With the *p* omitted, the combination *-sle* has a tendency to change (in sound at least) into *-sel*, or *-sl*, as in *muscle*, pronounced *mussel*; although in the derived forms, such as *muscular*, both the *c* and the *u* are preserved. The same applies to *corpuscle*, as compared with *corpuscular*, &c.]

**2. One who corrects errors in proof sheets previously to printing off.**

He is by country, an Englishman; by birth, a gentleman; by education, a scholar; afterwards, a corrector of the common law print, with M. Tottle the printer. *Proceedings against Garnet*, sign. T. 1. b. 1. 1601.

I had been at Louvain and Antwerp to take some depositions for the discovering of the authors and correctors of that most pernicious libel, *Corona Regia*. *Trumbull, To the Secretary of State*, 1610. *Cabal*, p. 151.

**In Medicine. Corrigent.**

Such an ingredient in a composition, as guards against or abates the force of another: as the laxative salts prevent the grievous collications of resinous purges, by dividing their particles, and preventing their adhesion to the intestinal membranes, and as spices and carminative seeds assist the operation of some catharticks, by dissipating wind. In making a medicine, such a thing is called a corrector, which destroys or diminishes a quality that could not otherwise be dispensed with: thus turpentine is a corrector of quicksilver, by destroying its fluidity, and making it capable of mixture. *Quincy*.

**Correctory. adj. Corrective: (the commoner term).**

Times odious and correctory are called strict in the law, and that which is favourable is called remissive: because as the matter of that is to be made as little as it may be, so the matter of it may be enlarged. *Jeremy Taylor, Doctor Dubit* (him, li. 104. (Ord MS.))

**Correctory. s. Corrective.**

The seed and root (of spurge) which is good for such as fall into a dropsie; being ministered with discretion and good advice of excellent phisition, and prepared with his correctories by some honest apothecarie. *Gervase, Herbal*, p. 108: ed. 1623. (Ord MS.)

**Correlate. s. That which constitutes a correlation; that by which the correlation is constituted or shown. See Correlative, s.**

It is one thing for a father to cease to be a father, by ending off his son; and another for him to cease to be so, by the death of his son: in this the relation is at an end, for want of a correlate. *South*.

Whatever amount of power an organism expends in any shape, is the correlate and equivalent of a power that was taken into it from without. *Herbert Spencer, Data of Biology*, § 23.

**Correlation. s. Mutual relation. See Correlative, s.**

This regularity of the animal structure is rendered more remarkable by the following considerations. First, the limbs, separately taken, have not this correlation of parts; but the contrary of it, a knife drawn down the spine cuts the human body into two parts, externally equal and alike. *Pohp, Natural Theology*, (Ord MS.)

And as we have the same kind of evidence that light and heat, acting upon the organic germ, become transformed into vital force which we witness of the conversion of heat into electricity by acting on a certain combination of metals, or on electricity into magnetism by being passed round a bar of iron, or of heat or electricity into motion when their self-repulsive action separates the particles of matter from each other. For we shall presently find that just as heat, light, chemical affinity, &c., are transformable into vital force, so is vital force capable of manifesting itself in the production of light, heat, electricity, chemical affinity, or mechanical motion; thus completing the proof of heat, mutual relationship, or correlation, which has been shown to exist among the chemical and physical forces themselves. *Dr. Carpenter, Principles of Human Physiology*, § 124.

**Correlative. adj. Having, or exhibiting, convertible relation. See next entry.**

Father and son, husband and wife, and such other correlative terms, seem nearly to belong one to another. *South*.

Giving is a relative action, and so requires a correlative to answer it: giving on one part, transfers no property, unless there be an accepting on the other. *Id.*

Nouns are correlative to each other, which denote objects related to each other, and viewed as to that relation. Thus, though a king is a ruler of men, 'king' and 'man' are not correlative, but 'king' and 'subject' are. *Whately, Elements of Logic*, li. ch. v. § 1.

**Correlative. s.**

[In correlation, as distinguished from relation, the main characteristic lies in the fact of the latter word implying an antecedent; whereas, when the former is used, each of the terms to which it applies is either antecedent or relative indifferently.]

In this view, the word relative is taken with the sense it bears in grammar; this being held to be the one in which its import is most characteristically marked. Thus, in the following sentence—

The man who goes to market is here,—

the words *man* and *who*, though equally members of a grammatical relation, are by no means equally relative; nor are they of equal value in the way of import. Though a name for the same object, *who*, without *man*, or some similar term, has no meaning; whereas *man*, without *who*, is as significant as ever. The interchangeability, then, of the terms is imperfect; and one of them, the antecedent, has a decided prerogative over the other in the way of stability. There is a single object with two names, of which the one is permanent and inconvertible, being founded on the essential qualities of that to which it applies; whereas the other is variable and convertible, with no intrinsic meaning of its own, and capable of expressing relations only—these being changeable. Thus, the *who* that in the foregoing sentence

*man*, and denotes a male, in 'the mother who bare the child'—*woman*, and denotes a female. Between *correlatives*, however, the equality of the terms in respect to the reality of their import is absolute; and it is this because, instead of denoting single objects, they denote separate ones, as is seen in such instances as *parent* and *child*, *sovereign* and *subject*. Furthermore, the same object viewed from different points of view is in the same category with two different objects; a fact which applies to several important abstractions, e.g. *height* and *depth*: so that these, like the preceding, give us *correlation* rather than simple *relation*. A force which exhibits or manifests itself in different ways does the same; and it is the application of the term to the class of phenomena indicated in the extracts under *Correlation* that gives the word its present importance, the Correlation of Forces and the Persistence or indestructibility of Force being equivalent terms.

The *con*, then, as it presents itself under the form of *cor-*, indicates the absolute indifference or convertibility of the terms to which it applies, as contrasted with the inconvertibility and difference of import which characterize the simple relatives; at least, so far as they are exemplified by the relatives with their antecedents in grammar. *Correlatives* are different from both. In

The man who goes to market is the man who buys the meat,

the two *whos* are co-relatives, i.e. joint-relatives. The distinction, however, is ignored.]

That which has or exhibits convertible relation.]

By what ever method one man gains an estate, by that same method, or its correlative, another has lost it. *Sir W. Blackstone*.

**Corréption. s. [Lat. *correptio*, -onis; from *con* and *rapiō*=seize, snatch.] Reprehension; reproof.**

That I use all mildness or manuectude in ad-

monishing; the angry immoderate correction being rather apt to provoke, than to amend. *Hammond, Of fraternal Correction or Correction*, § 18.

His charity of fraternal correction having only this caution or restraint, the hearer's interest. *Bishop's Cell, Life of Hammond*, § 2.

If we must be talking of other people's faults, let it not be to defame, but to amend them, by converting our detraction into admonition and fraternal correction. *Dr. H. More, Government of the Tongue*.

**Correspond. e. n. [Fr. *correspondre*; from Lat. *con* and *respondere*=answer.]**

1. Suit; answer; be proportionate; be adequate to; be adapted to; fit; form a counterpart with anything; (often with *to* or *with*).

The days, if one be compared with another successively throughout the year, are 1 and not to be equal, and will not justly correspond with any artificial or mechanical equal measures of time. *Holcher, Discourse concerning Time*.

Words being but empty sounds, any farther than they are signs of our ideas, we cannot but assent to them, as they correspond to those ideas we have, but no farther than that. *Locke*.

2. Keep up an epistolary correspondence; either simply, as, 'We correspond,' or followed by *with*, as, 'We correspond with one another.'

**Correspondence. s.**

1. Relation; reciprocal adaptation of one thing to another.

Between the law of their heavenly operations, and the motions of men in this state of mortality, such correspondence there is as maketh it expedient to know in some sort the one, for the others more perfect direction. *Hooker, Ecclesiastical Polity*, li. 1.

Alike in the simplest inferences of the child, and a complex ones of the man of science, we find a correspondence between simultaneous and successive changes in the organism, and of existence and sequences in its environment. *Herbert Spencer, Data of Biology*, § 28.

2. Intercourse; reciprocal relation.

Sure the villains hold a correspondence with the enemy, and thus they would betray us. *Sir J. Dauland*.

It happens very oddly, that the pope and I should have the same thought much about the same time: my enemies will be apt to say, that we hold a correspondence together, and act by concert in this matter. *Adriana, Guardian*, no. 116.

3. Friendship; interchange of offices or civilities.

Let such military persons be assured, and well-reputed of, rather than factious and popular; holding also good correspondence with the other great men in the state. *Bacon, Essays*, 17.

4. Interchange of letters, one being answered by another; as in 'Keep up a correspondence.'

**Correspondency. s. Same as Correspondence.**

Whatever we fancy, things keep their course; and their habitudes, correspondences, and relations keep the same to one another. *Locke*.

**Correspondent. adj. Suitable; adapted; agreeable; answerable.**

What good or evil is there under the sun, what action correspondent or requirment unto the law which God hath imposed upon his creatures, but in or upon it God doth work, according to the law which himself hath eternally purposed to keep. *Hooker*.

And as five waxes th' ethereal regions bind, Five correspondent are to earth assigned. *Dryden, Tristram*, p. from *Ossian*.

**Correspondent. s. One with whom intercourse or commerce is kept up by mutual message or letters.**

He was pleased to command me to send to him, and receive from him all his letters from and to all his correspondents at home and abroad. *Sir J. Dauland*, dedication.

Few words illustrate the difference between the form in *co-* and the form in *cor-* better than this. A correspondent is a joint Respondent, or one opposed to the plaintiff, being in ecclesiastical cases what defendant is in civil. When there are more respondents than one, they are *co-respondents* (not *correspondents*) with each other.

**Correspondently. adv.** In a correspondent manner.

The terms the episcopal power of excommunication, the apostolical rod; and *correspondently* he calls Danamus, a bishop, his shepherd; and himself, a provoker, his sheep.—*Bishop Marton's Episcopacy asserted*, p. 25.

**Correspondive. adj.** Answerable; adapted to anything.

Prison's six gates 'P' the city, with many staples, And *correspondive* and fulfilling bolts, Spurr up the sum of Troy.

*Shakespeare, Troilus and Cressida*, prologue.

**Corridor, or Corridor. s.** [Fr.] In Architecture. Gallery or passage round a quadrangle leading to the several chambers connected with it; any gallery of communication.

There is something very noble in the amphitheatre, though the high wall and *corridors* that went round it are almost entirely ruined.—*Addison, Travels in Italy*.

He pass'd the portal—cross'd the *corridor*, And reach'd the chamber as the strain gave o'er.

*Byron, The Corsair*, l. 14.

**Corrigent. adj. and s.** [The English form of the Latin *corrigena*, -*cutis*, the present participle of *corrigo*—correct. Of the three medical terms (Corrective and Corrector being the other two) it is the most strictly technical; having to correspond with it the similarly formed term *Adjuvant*, from the Latin *adjuvans*—helping. Hence, the *adjuvantia* and *corrigentia* are often spoken of together: oftener, perhaps, in their Latin than their English forms. When followed by *of*, *corrective* and *corrector* are the more convenient terms, as 'Turpentine is a *corrector of* quicksilver.'] Corrective.

**Corrigible. adj.**

1. Capable of deserving of, or being liable to, correction, punishment, or amendment.

Though the judges are a reverend body, yet they are, as all subjects are, *corrigible*.—*Bacon, Works*, v. 120. (3rd ed.)

2. Corrective; having the power to correct.

Our bodies are our gardens, to the which our wills are gardeners; so that, if we will either have it sterile with idleness, or manured with industry, the power and *corrigible* authority of this lies in our will. • *Shakespeare, Othello*, l. 3.

**Corrival. s.** Rival; competitor. *Rare*.

They had governments commonly out of the two families of the Geraldines and Butlers, both adversaries and *corrivals* one against the other.—*Spencer, View of the State of Ireland*.

He that doth redeem her thence, might wear Without *corrival* all her dignities.

*Shakespeare, Henry IV, Part I*, l. 3.

Others both just and wise, and *corrival* among the rest, if they may not hate and forsake as Moses enjoins, and the gospel imports, will find it impossible not to love otherwise than will sort with the love of God, whose jealousy brooks no *corrival*.—*Milton, Doctrine and Discipline of Divorce*.

*Corival*, though used as synonymous with *rival* or *corrival*, is a different word. Two persons or more rivaling another are the only true *corivals*.

**Corrival. adj.** Contending. *Rare*.

Not thinking, perhaps, that this would be to erect a power equal and *corrival* with that of God.—*Bishop Fleetwood, Essay on Miracles*.

**Corrival. s. n.** Vic with. *Rare*.

*Elizabethan, Blessed Birthday*, p. 10.

**Corrivality. s.** Competition; corrivalry.

Something also the Bishop of Durham noted, out of the Gospel of St. Matthew, for the imposition of hands upon children. The conclusion was, for the fuller explanation, that we met not a sacrament, or a *corroboratio* to a former sacrament, that it should be considered of by their lordships, whether it might not, without alteration, twofold his majesty was still very wary, he intubed an examination with a confirmation. *Hampton Court Conference*, p. 11: 1663.

It must, however, be confessed, that he was at all times somewhat apt to betray what Johnson imputes to Swift, a propensity to 'revolve ideas from which other minds shrink with disgust.' At least he must be allowed to have often mistaken violence and grossness for vigour. 'The morose draught of oblivion, this drug, is well calculated to preserve a galling wakefulness, and to feed the living ulcer of a *corroding* memory. Thus to administer the opiate potion of animosity, powdered with all the ingredients of scorn and contempt.—*Berke, Reflections on the French Revolution*, as quoted by Lord Brougham in *Historical Sketches of Statesmen of the Reign of George III*.

*Corrody* signifies a sum of money or an allowance of meat, drink, or clothing due to the king from an abbot or other house of religion who roof he was the founder towards the sustentation of such a one of his servants as he thought fit to bestow it upon. The difference between a *corrody* and a pension seems to be that a *corrody* was allotted for the maintenance of any of the king's servants in an abbey; a pension is given to one of the king's chaplains for his better maintenance (ill he may be provided with a benefice).—*Jacob, Latin Dictionary*.

**Corrosion. s.** Act of eating or wearing away by degrees; state of being so eaten, worn away, fretted, or corroded.

That *corrosion* and dissolution of bodies, even the most solid and durable, which is violently ascribed to the air, is caused merely by the action of water upon them; the air being so far from injuring and preying upon the bodies it envelopes, that it contributes to their security and preservation. *Woodward*.

*Corrosion* is a particular species of dissolution of bodies, either by an acid or a saline menstruum. It is almost wholly designed for the resolution of bodies most strongly compacted, as bones and metals, so that the menstrua here employed, have a considerable measure of force. These figures, whether acid or urinous, are not only but salts dissolved in a little phlegm; therefore these being solid, and consequently containing a considerable quantity of matter, do both attract one another more, and are also more attracted by the particles of the body to be dissolved; so when the more solid bodies are put into saline menstrua, the attraction is stronger than in other solutions; and the motion, which is always proportional to the attraction, is more violent; so that we may easily conceive, when the motion is in such a manner increased, it should drive the salts into the pores of the bodies, and open and loosen their cohesion, though ever so firm.—*Quincy*.

**Corrosive. adj.** Having the power of corroding, consuming, fretting, or wearing away.

The *corverant*, even when alive, has the rankest and most disagreeable smell of any bird. **Cosmoplastic. adj.** [Gr. *πλαστικός* = plastic.] World-forming.

great multitudes of men, struck dumb with terror heretofore, rose out of their hiding-places; and, as it were, saw one another, how multitudinous they were; and began speaking and complaining. **Counterfact.** *v. a.* [That the common pronunciation of this word is as the accents of the present entry represent it will probably be admitted at once. Even if there be a minority of accurate speakers who say *counterfact* in the ordinary form of the verb, all doubt vanishes when resort is had to the participles *counteracted* and *counteracting*.

As the word is a common one, perhaps the commonest of all the compounds of *counter*, the question here suggested becomes important; inasmuch as among the

trissyllabic verbs similarly formed there are several which, from being comparatively rare, have their accent doubtful. Hence, it is submitted to the reader that in all such the precedent of *counteract* be followed; so that to *Counterchéck*, &c., be sounded with a greater stress on the last syllable than on the first. This is as much as can be safely said; since the first syllable has an accent also, though of a less decided character.

But this is not all. Sometimes, as in the word just quoted, there are two concurrent forms, one representing a verb, and one a noun; and when this is the case, a fresh series of precedents suggests itself, giving such words as *surgery* and *surrey*, *compound* and *compound*, with many others. Does this distinction extend to trissyllables? i.e. is the verb *counterchéck*, and the substantive *countercheck*? The editor believes that the question is to be answered in the affirmative, and has accented the words which exhibit it accordingly.

This means, that it is the noun which gives up the compound in its most typical form; the verb giving two separate words (*counter* + *check*) rather than a single one. For the verb, however, thus to take the guise of two words, it is necessary that its second element should be English. Hence, in *counterfeit* the accent is the same for both the noun and the verb; the word being treated, not as a compound of *counter* and some other English word, but as a French word which we have taken ready-made. In *Countermand*, where the accent is probably on the last syllable, *-mand*, though not an English word, may be said, on the strength of *com-mand* and *mand-ate*, to pass as such, and in the way of accent to be treated as if it were one. The same applies to *Countervail*, as compared with *avail*.

Hinder anything from its effect by contrary agency.

In this case we can find no principle within him strong enough to *counteract* that principle, and to relieve him. *South*.

**Counteraction.** *s.* Opposition.

The beauties of writing have been observed to be often such as cannot, in the present state of knowledge, be excited by evidence or drawn out into demonstrations: they are therefore wholly subject to the imagination, and do not force their effects upon a mind preoccupied by unfavourable sentiments, nor overcome the counter-action of a false principle or of stubborn partiality. *Johann, Rambler*, &c.

What old Calvin meant to be sung in unison, they chose should be performed in counterpoint, or in four parts.—*Mason, Essay on Church Music*, p. 208.  
The title of *counterpoint*, given to composition, or music in parts, preceded not only the invention of clefs, but of lines and spaces. In many musicals we have seen the influence of simultaneous sounds in points, or marks over particular words and syllables, like accents; and, afterwards, as the monks and priests began to feel a pleasure in the consonance of a 4th, a 5th, or an 8th, a second point or dot was placed over the first. These were not in the beginning regulated by lines, but by their greater or less degree of elevation and distance from each other. After some time, we found a line drawn through such dots or points as were on its level; then two lines, one red and the other yellow, to denote the tenor and base. After this, two or three centuries elapsed before a third and fourth line were added, at which the Roman misals have remained ever since. This is the short history and origin of the term *counterpoint*.—*Rees, Cyclopædia*.

Of equal vigour, might their motions stay,  
And, by a steady poise, the whole in quiet lay?  
*Sir R. Blackmore.*

of this kind may suffice... The genealogy in the first chapter of St. Matthew's Gospel was there set to music, and the single part not'd led me to conclude, that, 1644 was performed in canon, according to the mode of the age, while the laws was holding forth the existence of Abraham, the tenor in defiance of nature and chronology, would be employed in begueting base; the counter-tenor, Jacob; the treble, Joseph and all his brethren.—*Mason, Essays on Church Music, essay II.*

Almost all the vernacular poetry of the middle ages has its Latin *countertype*, poems of chivalry, poems of adventure, of course Saint-Legends, even the long fables, which the Germans call *land-poetry*, and the nursery songs.—*Milman, History of Latin Christianity, II. xiv. ch. iv.*

**Country.** *s.* [Fr. *contrée*, from Lat. *contra* = against; the original meaning of the word being the part, land, district, view, or landscape opposite the spectator. In like manner, the German *gegen* is from *gegen* = against. That this is not the only origin which has been suggested, may be seen by the extracts; where it may also be seen that the one here adopted has authority as well as reason in its favour.]

1. Tract of land; region, as distinguished from other regions.

They require to be examined concerning the descriptions of those countries of which they would be informed. *Bishop Sprat.*

[*Country.* French, *contrée*; Italian, *contrada* (from *contra*, the district which lies opposite you, & German, *gegen*, a situation; Middle German, *gegen*, from *gegen*, opposite. (Dix.) Muratori suggests the Latin *contra*, a person of the same country, for which in Middle Latin was used *contradatus*. Occius est Michael subestello Mutine ab ipso *contradatus*. (Chron., A.D. 1040.) Et omnes *contradatus* dispersi sunt; id est (says Muratori) eives ejusdem terre. —*Wedgwood, Dictionary of English Etymology.*]

[One more word of the same kind, the presence of which in French, Italian, and English it would be impossible to explain except as a Germanism, as a blunder committed by people who spoke Latin but thought in German. *Gegen* in German means region or country. It is a recognised term, and it signified originally that which is before or against,

what forms the object of our view. Now in Latin *gegen*, or against, would be expressed by *contra*; and the Germans, not recollecting at once the Latin word *region*, took to translating their idea of 'region', that which was before them, by *contratum* or *terra contra*. This became the Italian *trada*, the French *contrée*, the English *country*. *Professor Max Müller, Lectures on the Science of Language, second series, p. 275.*

2. Parts of a region distant from cities or courts; rural parts.

Would I a house for happiness erect  
Nature alone should be the architect;  
She'd build it more convenient than great,  
And doubtless in the country chose her seat.

From the town back again into the *country*.—*Spectator.*

4. Inhabitants of any region.

All the *country*, in a general voice,  
Cry'd hark upon him; all their prayers and love  
Were set on *Howford*.

*Shakespeare, Henry IV. Part II. iv. 1.*

Used *adjectively*, or as the first element in a compound.

She bawling the cruel tyrant to scorn, spoke in  
her *country* language.—*2 Macbeth, vi. 27.*  
'Tis not a *country* speech know, that having  
received a shilling from one that owes her three, and  
a shilling also from another that owes her three,  
that the remaining debts in each of their hands are  
equal? *Locke.*

positive infinite, than the *country* fellow had of the  
water which was yet to pass the channel of *ver*  
where he stood. *Id.*

Talk but with *country* people, or young people,  
and you shall find that the notions they apply this  
name to are so odd, that nobody can imagine they  
were taught by a rational man. *Id.*

Come, we'll cut to our *country* seat repair.

The native home of innocence and love. *Norris.*

In the following extract, where the *country* man is contrasted with the man of the town, or with those who have better opportunities for learning, there are two words rather than a compound; though, in general, the combination gives a single word.

We make a *country* man dumb, whom ye will not  
allow to speak but by the rules of grammar.—*Dryden, Translation of Desprez's Art of Painting.*

**Country-dance.** *s.* [Fr. *contre* opposite.] Dance so called from the position of the partners: (the present spelling, as well as the sound, being *catechrestic*.)

should confine himself to *country* dances.—*Spectator.*

Smelt'd their fair actions from descending prose,

And set their battles in eternal light. *Pope.*

the conduct of one whom they do not consider only  
as their leader, but as their *countrymen*.—*Addison, Present State of the War.*

2. Rustic; one who inhabits rural parts.

*countrymen* coming up to the city, leave their wives  
in the country. *Grant, Observations on the Bills of Mortality.*

**County.** *s.* [N.Fr. *counté*, mod. *comté*; Lat. *comitatus*.]

1. In the English sense of the word. *Shife.*

A shire is a circuit or portion of the realm, into  
which the whole land is divided, for the administration  
of justice; so that there is no part of the  
kingdom, but what lieth within some *county*. Every  
*county* is governed by a yearly officer, called a  
sheriff, who puts in execution all the commands and  
judgements of the king's courts. Of these *counties*  
four are termed *county-palatines*, as that of Lancaster,  
Westmoreland, Durham, and Glos. A *county-palatine*  
is a jurisdiction of so high a nature, that the chief  
governments of these, by special charter from the  
king, sent out all writs in their own name, and did  
all things touching justice as absolutely as the

prince himself, only acknowledging him their superior and over-ruler. But this power has, by a statute in Henry VIII. his time, been much abridged. There are likewise *counties* corporate, which are certain cities or ancient boroughs upon which a prince has thought good to bestow extraordinary liberties. Of these London is one, York another, the city of Chester a third, and Canterbury a fourth. And to these may be added many more; as the *county* of the town of Kingston upon Hull, the *county* of the town of Haverfordwest, and the *county* of Litchfield. *County* is, in another signification, used for the county-court.—*Cowell.*

2. Used *adjectively*; preceding *town*, *family*, *election*, and several other common substantives; the construction in many cases determining whether the combination give two words or a compound. See *County-court*.

He caught his death the last *county* sessions, where he would go to see justice done to a poor widow-woman and her fatherless children.—*Addison, Spectator.*

2. In the Continental sense of the word. Actual or original domain of a count.

Rodolph disclaimed the acts of his Chancellor, recognised the donation of the Emperor Louis, and made a new donation, in his own name, of the whole territory from Radobinski to Copernice, the March of Ancona, the duchy of Spoleto, the *county* of Bertinoro, the lands of the Countess Matilda, the archbishop of Ravenna, the Pentapolis, Ferrara, Comacchio, Montefeltro, and Masso Traversa, absolutely, and with all his full rights, to the See of St. Peter.—*Milman, History of Latin Christianity, b. i. ch. vi.*

This great marquise, or *county* of Tuscany, which for a long period exercised so vast an influence for evil or for good, had gradually risen to its enormous power and wealth.—*Ibid. b. v. ch. xl.*

3. *Barlioni. Obsolete.*

Brave hope of Bedford, grow apace in bounty,  
And count of wisdom more than of thy *county*.—*Spenser, Ruins of Time.*

**County.** *s.* This word appears to be sometimes a mere variation of Count; at others the Italian *conte*; e.g. in the Italian story of Romeo and Juliet, where Paris is called the *County* Paris. In many cases, however, it is difficult to say which origin is the true one. Thus, in

'Oh *County* Guy, the hour is nigh,'

the word may be a diminutive suggesting endearment, or it may be a mere metrical license. *Obsolete.*

He made Hugh Lupus *county* palatine of Chester, and gave that earldom to him and his heirs, to hold the same 'ita liber ad plenum sicut rex tenet Angliam ad eorundem.'—*Sir J. B. Hall.*

**County-court, or County-court.** *s.* [this is a word which illustrates the difficulty of determining whether a combination gives two words or a compound. That the word is often sounded *county-court* is certain; but even those who so sound it use a second accent whenever they have to contrast it with some other court, and say *county-court*. When the construction is adjectival, as in *county-court judge*, the accent is, perhaps, always thrown back.]

1. Court, recently established, for the recovery of small debts: (this being its usual meaning).

2. Translation into Anglicized Norman-French of the Anglo-Saxon *shiregeman* -shire meeting. So influential an authority as Hallam uses it in this sense; the original compound being the true English word.

The liberties of these Anglo-Saxon *thanes* were chiefly secured, next to their swords and their free spirit, by the inalienable right of dealing civil and criminal suits in their own *county-court*; an institution which... deserves attention... The division of the kingdom into *counties*, of these into hundreds and decaneries, for the purpose of administering justice, was not peculiar to England... It was to the *county-court* that an English freeman looked chiefly for the maintenance of his civil rights. In this assembly, held monthly, or at least more than once a year... the oath of allegiance was administered to all freemen, branches of the peace were inquired into, crimes were investigated, and claims determined. I assign all these functions to the *county-court*.... Before the Conquest, says Gurney, ... grants were enrolled in the *shire-book* in public

*shier-note*. . . This may be so; but the *country-cour* has long ceased to be a court of record.—*Johnson, View of the State of Europe during the Middle Ages*, pt. i. ch. viii.

Amongst the remarkable plants of Ceylon, there is one concerning which a singular error has been perpetuated in botanical works from the time of Paul Hermann, who first described it in 1697, to the present. It is the *Kiri-angum*. . . to which has been given the name of the Ceylon *cow-tree*, and it is asserted that the natives drink the juice as we do milk. . . But this is altogether a mistake; the Ceylon plant, like many others, has acquired its epithet of *kiri*, not from the juice being susceptible of being used as a substitute for milk, but simply from its resemblance to it in colour and consistency. It is a creeper found on the southern and western coasts, and used medicinally by the natives, but never as an article of food. The leaves, when chopped and boiled, are administered to nurses by native practitioners, and are supposed to increase the secretion of milk. As to its use . . . in lieu of the vaccine matters, it is altogether erroneous. — *Sir J. E. Tennant, Ceylon*, pt. i. ch. iii.

**Cowwheat. s.** Name of a plant: (in Gerard it is that of the *Euphrasia officinalis*, and of two or three others. **Crab. s.** [from A.S. *crabbe*: see last extract.]

1. Crustaceous animal so called, of which the common crab (*Cancer Pagurus*) is the type.

Those that cast their shell are, the lobster, the crayfish, the holmwood or doleman, and the tortoise. The old shells are never found; so as it is like they scale off and crumble away by degrees. *Bacon, Natural and Experimental History.*

2. Fourth sign in the zodiac.

Then parts the Twins and Crab, the dog divides, And Argo's keel, that broke the frothy tide. *Cæcilius.*

[The meaning of the word is undoubtedly the pinching animal. It is closely connected with the English *grab*, to seize; Breton, *kraban*; Old English, *cræpe*, a claw; Italian, *grappare*, to seize, to scrapple; *grappa*, a bunch; English, *cramp*; Italian, *grappa*, *grappolo*, a contraction, drawing together; Icelandic, *kryppa*, to contract; *kryppir*, contracted, crooked; Italian, *grappa*, a knot, knob, bunch; English, *crump*, humped, crooked; Dutch, *krom*; German, *krumm*, crooked; Gaelic, *crab*, to crumple, draw oneself together; *crab*, a hook, a crab, a crooked woman; *crab*, a claw, the nave of a wheel. Now we have a series of words beginning with *c* of very similar meaning: *clasp*, *clump*, *club*, *clip*, *cleave*, *claw*, &c., many of which cannot be separated from their analogues in the series with an initial *c*. Thus we use almost indifferently *grasp* and *clasp*, *clasp iron* and *cramp iron*, *assemble* and *clamber*, *cramp-fisted* and *claw-fisted*; Icelandic, *krumbóltr*. The Icelandic *krumr* corresponds to English *clump*; French *grimper*, to English *climb*; Dutch *kruisen*, to English *claw*. Since then in the *c* series we came to the conclusion that the radical idea was that of a lump or thick mass, from whence the notion of sticking together, contracting, compressing were derived, we must assume as the origin of the *c* series forms like the Welsh *crab*, *crach*, a round hump; Gaelic, *crab*, nave of a wheel; English, *crab*, a clown (properly a clown) (Halliwell); Italian, *grappa*, *grappolo*, a bunch. Then with the sense of contraction or compression we have Gaelic, *crab*, to crumple, *crabach*, a crumple; Italian, *grappare*; English, to *grab*, to clutch, to seize between claws; Gaelic, *crab*; Breton, *graban*; English, *crapple*, the claw or fang, the instrument of scribbling or writing. A usual pronunciation gives Italian, *grappa*; French, *cramp*, a hook; and as in the *c* series we saw *clump* pass into *claw*, the *p* is in like manner lost after the *c*, giving Dutch, *krumm*, humped; Kilian and English, *crum*, to stuff. In like manner we pass from Welsh, *crab*; Icelandic, *kryppa*, a hump, to English, *cramp-back*, *cramp-back*; and thence to German, *krumm*, crooked. *Wedgwood, Dictionary of English Etymology.*

**Crab. s.** [?] Wild apple.

**Crab. s.** [?] Kind of windlass of great power.

It signifies a battering-ram, coach-box, starlings or posts to break the ice above a bridge, the dogs in a fire grate, trestles to saw wood on, a painter's easel, or awl. In a similar manner the Spanish, *cabra*, a goat, was used as the designation of a machine for throwing stones; *cabra*, a crane; French, *chèvre*, a goat, and also a machine for raising weights. In the Romance of the department of the Tarn the place of the *c* is transposed, and the word for a goat is *crabo*; *crabit*, a kid; and both these terms are used to designate the machine for raising weights, which we term in English a *crab*,

as well as trestles.—*Wedgwood, Dictionary of English Etymology.*

**Craniometry.** *s.* Study of crania or skulls, in respect to their capacity and shape.

The defect of some systems of *craniometry* lies in the circumstance that they are not equally applicable to the case of living men. Thus, while Van Baer, for instance, with many others, measures the diameter of the skull from the lowest point of the forehead, the so-called *glabella*, to the most projecting point of the occiput, Welcker takes the frontal eminence . . . as his starting-point. — *Saturday Review*, February 11, 1865.

**Cranium.** *s. pl. crania*. [Lat.] Skull.

In wounds made by confusion, when the *cranium* is a little naked, you ought not presently to cradle in double; for if that confused flesh be well digested,

the bone will learn with the wound without much difficulty. — *Wise-man, Surgery*.

The strong character of these Eskimauz *crania*, and the marked affinity which they exhibit to the American and Mongolian races, concur with all accurate descriptions of the physical characters of the people in refuting the strange opinion of Robertson, *History of America*, vol. ii. p. 30, that the Eskimauz are descendants from the Norwegians. — *Lawrence, Lectures*, p. 363, note 4. (Orl. M.).

In the following observations, I can claim but little originality, seeing that the system of measurements of the *cranium* proposed for adoption . . . differs but little except in amplification from that propounded by Professor von Baer . . . in which he describes the characters of various Asiatic and other *crania*, contained in the anthropological collection in that city. To these measurements I shall afterwards refer. But before entering upon the immediate subject . . . I would premise a few words respecting the present value of *craniometry* in the study of ethnology.

Our object, however, on the present occasion, is simply to inquire into the value of a single character. . . . One reason for the selection of the *cranium* for this purpose, arises from the circumstance that, of all the individual portions of the bony skeleton, none in the first place is so thoroughly characteristic of man; and secondly, because there is none, speaking generally, which presents such well-marked diversities in different races of mankind. In viewing any collection of *crania*, the most unobservant will be struck with the fact that the specimens, if sufficiently numerous, may be divided into groups marked with distinctive characters. One set of skulls will be found nearly or quite as broad as they are long, whilst in another the length will considerably exceed the breadth. In the jaw, with the teeth, or the lower part of the face, will be seen to project. . . . The study of the human *cranium*, in an ethnological sense, is a recent one, and may be said to date from Blumenbach. . . . Since his time various orders of measuring the *cranium*, and of ascertaining its capacity, have been proposed for different purposes. Some very ingenious, but most of them so complicated and inapplicable, except for the special purposes in view of the proposer, that it may truly be said, as asserted by Professor Wagner, that we are as yet without a generally adopted mode of making comparative *craniometrical* measurements. Since Blumenbach, the most important researches on the subject of ethnological *craniology* have been those of Professor Retzius of Stockholm, whose early death science has recently had to deplore, and of the illustrious Professor von Baer of St. Petersburg, in whose steps I began by saying I was but a humble follower. — *Bank, Systematic Mode of Craniometry*.

**Crank.** *s.*

1. Any bending or winding passage.

Lead it through the rivers of your blood,  
Even to the court, the heart; to the seat of the brain;

The strongest nerves, and small inferior veins,  
From me receive that natural competency,  
Whereby they live. — *Shakespeare, Coriolanus*, i. 1.

Like a young pine,  
He grows up planted under a fair oak,  
Whose strong large branches yet do shelter him  
And every traveller admires his beauty;

Trouble his stream, and down all *v. sels* that  
Ride on his greatness.

For I was a *crank* with a briske young boy.

*Dr. H. More, Song of the Soul*, l. 121.

**Crannog.** *s.* [Irish.] In *Archæology*. See extract: (spelt in extract with a final *e*, but *Crannog* and *Crannock* are the older forms).

*Crannogues* of Ireland . . . were lake fortresses, constructed on artificial islands, for greater security during troublous times. In the annals of Ireland they are noticed at least a thousand years ago, and records respecting them continued till nearly the year 1700. Not unfrequently the *crannogues* were erected on a hill within the lake, thus taking for its basis a subaqueous mound, not quite high enough to be called an island. Around the sides of this, strong oak poles were driven in a circle of about two hundred feet in circumference. The surface within was usually covered over with a series of short logs, on the top of which stones, clay, and other earthy matters were placed. Large flat stones were deposited in the centre, as the hearth on which the fire was erected. . . . There are usually one or two question-stones found, and numerous bones of black cattle, deer, and swine. — *Dr. Hunt, Ancient Meads*, p. 338.

**Cranny.** *s.* [?] Chink; cleft; fissure.

The eye of the understanding is like the eye of the sense; for as you may see great objects through small *crannies* or holes, so you may see great actions of nature through small and contemptible instances. — *Bacon, Natural and Experimental History*.

And therefore beat and laid about,  
To find a *cranny* to creep out. — *Baile, Hudibras*.

**Crants.** *s.* [German, *kranz* = crown.] Crown; chaplet; garland. (This word, which never became English, seems to have been used by Shakespeare on the strength of his having learned that *rose-crown* is the translation of the name of one of his characters, *Antony necrany*.)

Yet here she is allow'd her virgin *crants*,  
Her maiden ornaments, and the bringing home  
Of bell and burial. — *Shakespeare, Hamlet*, v. 1.

**Crány. s.** Cranium in an English, though uncommon and vulgar, form.

In the brain, which we term the seat of reason, there is not any thing of moment, more than I can discover in the *crany* of a beast; and this is a sensible and no inconsiderable argument of the immortality of the soul, at least in that sense we usually so conceive it.—*Sir F. Boerhaave, Religio Medici*, 3d. (Orl 218.)

**Crape. s.** [Fr. *crêpe* and *crêpe*; Low Lat. *crepta*.] Thin stuff loosely woven.

**Crash. s.** Loud sudden mixed sound, as of many things broken at the same time.

ever Plato did.—Pope.

Used metaphorically.

‘This is a *crash*!’ said Coningsdy, with a grave  
rather than agitated countenance, to Sideron, as his

expression of condolence.—*Diarrhoei the younger*,  
*Coningsdy*, ch. III.

**Crashing. verbal abs.** Violent complicated noise.

There shall be the noise of a cry from the fish-  
gate, and an howling from the second, and a great  
*crashing* from the hills.—*Zephaniah*, I. 10.

**Crásta. s.** [Gr. *crástos*—mixture.] Tempera-  
ture; constitution arising from the various  
properties of humours.

The fancies of men are so immediately diversified  
by the individual *crásta*, that every man owns some-  
thing wherein none is like him.—*Glaucon*.

A man may be naturally inclined to pride, lust,  
and anger, as these inclinations are founded in a  
peculiar *crásta*, and constitution of the blood and  
spirits. South.

**Crass. adj.** [Lat. *crassus*.] Gross; stupid;  
obtuse; (often suggested by the legal and  
medical term ‘*crassa ignorantia*,’ i.e. gross  
want of professional skill).

Iron in aquafortis, will fall into solution, with

matter, so as not to be discoverable by human in-  
dustry; or, if discoverable, so diffused and scattered,

that it would never be possible to separate and  
extract it. Woodward, *Essay towards a Natural  
History of the Earth*.

**Crassiment. s.** [Lat. *crassimentum*, of which  
it is a mere English form, with the *i* inae-

*Anatomy*, where it means the Clot of the  
blood).

Now, as the bones are principally here intended,  
so also all the other solid parts of the body, that are  
made of the same *crassiment* of seed, may be here  
included.—*Smith, Portrait of Old Age*, p. 170.

**Crassitudo. s.** [Lat. *crassitudo*.] Grossness;  
coarseness; thickness.

The Dead Sea, which cometh up bitumen, is of  
that *crassitudo*, as living bodies, bound hand and  
foot, cast into it, have been borne up, and not sunk.  
—*Bacon, Natural and Experimental History*.

The terrestrial matter carried by rivers, into the  
sea, is sustained therein partly by the greater *cras-

its constant agitation.—*Woodward, Essay towards  
a Natural History of the Earth*.

*cratch*, I was wrapped in swathing-cloths.—*Hake-  
well, Apology*.

We see the Son of God, the God of all the world,  
in the form of a servant; not a *cratch* to cradle him  
in, not a crave to bury him in, was his own.—*Bishop  
Hall, Of Contemplation*, § 16.

Our monks and our sports (much of them) have  
relation to church-work. The coffin of our christ-  
mas-pies, in shape long, is in imitation of the *cratch*.  
*Stella, Table-Talk*.

**Crate. s.** [Lat. *crates* hurdle.] Strong  
wattle packing-case for crockery-ware (its  
most common application); cart-side, or  
cart with wattled side and hurdle. (*Crutch*,  
the same word, is used by the old writers  
for the manger in which Christ was crad-  
led. At present it is a provincial name  
(often sounded *scrutch*) for a pigkiller's  
handbarrow.)

I have seen a horse carrying home the harvest on  
a *crate*. Johnson, *Journey to the Western Islands  
of Scotland*.

**Cráter. s.** [Lat. = *cup*.] Vent; aperture;

rough language, rating a young woman who had not  
brought home his *cravats* quite to the appointed  
time.—*Loach, Memoirs of Eliza, Duchess of Argyll*.

He was . . . simply a merry-eyed . . . man, with a  
chin propped by an ample, many-crowned neckcloth  
. . . so that to have considered his amenities apart  
from his *cravat*, would have been a severe . . . effort  
of abstraction.—*Nolan Warner*, ch. II.

With the accent on the first syllable.

With *cravat* beats his *Merlin* *cravat* moves.  
Pope, *Bossuet-Table*.

[*Cravat*, formerly written *cravat*, is spoken of by  
Skinner (who died in 1667) as a fashion lately in-  
troduced by travellers and soldiers. The fashion is said  
by Menage to have been brought in 1690 from the  
war, and to have been named from *cravatte* or *Cravats*,  
as the *Cravattes* (and after them a kind of  
light cavalry) were then called. The French had a  
regiment ‘*de Royal-Cravats*.’—*Wedgwood, Dictio-  
nary of English Etymology*.]

him to satisfy the *crávings* of it, by some wicked  
action. South.

**Craw. s.** [Dutch, *krayg*.]

1. Crop or first stomach of birds.

In birds there is no mastication, or comminution  
of the meat in the mouth; but in such as are not  
carnivorous, it is immediately swallowed into the  
crop or *craw*, or at least into a kind of anti-stomach,  
which I have observed in many, especially piscivo-  
rous birds.—*Kay, Wisdom of God manifested in the  
Works of the Creation*.

2. Stomach in general. *Rhetorical*.

That this holy prophet, the Baptist, should be  
great in the sight of God; and should not give him-  
self with the wicked priests of the earth, or the

bibling cheer, but should lead an austere and tem-  
perate diet.—*Auderson, Exposition upon Benedic-  
tus*, fol. 43: 1573.

And that if Blücher, Bulow, Gneisenau,  
And God knows who besides in ‘*au*’ and ‘*ou*,’  
Had not come up in time to cast an awe  
Into the hearts of those who fought till now

Reflect upon that litter of absurd opinions that  
*crawl* about the world, to the disgrace of reason.—  
*South*.

Behold a reverend sire, whom want of *grace*  
Has made the father of a nameless race,  
*Crawl* through the street, shov'd on, or rudely press'd  
By his own sons, that pass him by unheeded! *Pope*.  
[*Crawl*—Dutch, *krabben*, *krabben*, to scratch with the  
nails or claws; *krabbelen*, to scratch with the nails,  
to scabble, to scrawl, or make unprofitable scratches,  
inoperative pinnings, scribbles, sea excursions. (Kilian.) As in  
English we have formed *scrawl* from *scrabble*, so our  
*crawl* corresponds to the Dutch *krabbelen*, of which  
the fundamental meaning is to exercise the nails or  
claws. To *crawl* is to drag oneself on by clutching  
with the claws. German, *krabbeln*, to crawl about,  
go on all fours. Breton, *mont war he-grabenna*, to  
go on all fours—literally, to go on his claws, from  
*krabas*, a claw; *krabf*, *krabf*, to seize, to clutch.  
Danish, *krabde*, to crawl, scabble. Dutch, *krabbel*.

requires allym ments; as snails, tortoises, jellies, and  
*cráwshes*.—*Sir J. Poyner*.

Crabs are more numerous in the market than lob-  
sters, fewer being exported; *crayfish* are very fine,

consumption.—*Ausland, The Channel Islands*, p. 508.

You have won, I doubt not, the Ethic Epistles,  
and though they go a little into metaphysics, I per-

Newspaper*, June 1, 1861, article headed *Intellectual

Expeditio of Humphrey Chicker*.

**Crazedness.** *s.* Attribute suggested by

things present, is to imagine that any thing would  
help them.—*Hooker, Ecclesiastical Polity*.

Four several persons were scarcely able to hold

Touching other places, he may be said to hold  
them as one should do a wolf by the ears; nor will I  
speak now of the *craziness* of her title to many of  
them.—*Harsh, Visual Egypt*.

There is no *craziness* we feel that is not a record  
of God's having been offended by our nature; and  
every little note about us is a thorn or briar spring-

1653.

1. Weak; feeble; imbecile.

I have heard for certain of a minister of no small  
print and repute among the people, who took great  
offence at the great sleeves of a lady's new-fashioned  
gown, calling them anti-christian, ungodly, strange  
apparel, and such as the Lord was displeased with;  
yet within one year this good man's wife was in the  
same fashion, without any scandal to her superci-  
tious husband: so *crasé* are some men's judgements,  
and so easy their censures, as to matters of scandal.  
—*Jeremy Taylor, Artificial Happiness*, p. 144.

Marriage of the Count Palatine*, &c. p. 17: 1612.

scoldings of his Nantippe, making no more of them

Your huge eye-lids, nor your cheek of *cream*,  
That can entame my spirits to your worship.

*Shakespeare, As you like it*, iii. 3.

*Cream* is matured and made to rise speedily, by  
putting in cold water; which, as it seemeth, getteth  
down in the whey.—*Bacon, Natural and Experimental  
History*.

Milk, standing some time, naturally separates into  
an oily liquor called *cream*, and a thinner, blue, and  
more ponderous liquor called skimmed milk. *Ar-  
buthnot, On the Nature and Choice of Aliments*.

2. Vain so called.

But what were the countess's feelings, when she  
beheld nothing in the golden dishes and vases but  
the remnants of a devoured feast. Fragments of dis-  
sected fowls—ends of well-matched tongues—*creams*  
half-demolished jellies in trembling lumps—glassen  
sauce emptied, and bottles emptied quite—crusts

His [Rubens'] principal studies were made in  
Lombardy, after the works of Titian, Paolo Verone-  
se, and Tintoret, whose *cream* he has skinned  
(if you will allow the phrase) and extracted from the  
several beauties many general maxims and infallible  
rules.—*Translation* (by Dryden) of the *Sentiments*  
of C. A. Dufrenoy on the Works of the principal  
and best Painters of the two last ages; annexed to  
the *Translation of the Art of Painting*.

I promise you I will skin the *cream* of the court  
for Gilbert if he will but come—saunter to Kingston  
—migrate to Mousley—saunter to Saultrey—drop in  
at Dutton—make him acquainted with all the news  
of the neighbourhood, and place him only second to  
myself in the estimation of our enlightened and  
select circle of society.—*Theodore Hook, Gilbert  
Gurney*, vol. i. ch. iv.

Used adjectively.

The daisy-violet, the wild hyacinth, the milkwort,  
and the pretty germander-speedwell, vary the scene  
with innumerable spots of the blue; and the daffo-  
dill and narcissus rise boldly into notice, with their  
more decided and massive tones of golden yellow,  
and rich *cream* white. The little species of iris,  
trichonema columina, is particularly remarkable  
among the spring flowers. The snowdrop is rare  
in Guernsey, though not unknown; but it is com-  
mon in Jersey.—*Ausland, The Channel Islands*, p. 176.

[*Cream*.—In French *crème* two words seem conjoined,  
the one signifying cream, which ought to be written  
without the circumflex, and the other signifying  
*cream*, Old French *creme*, Greek *spuma*, the con-  
servated oil used in baptism. In Italian the two are  
kept distinct, *crema*, cream, and *cremiera*, cream.  
.. As is often the case with words beginning with

er, the equivalents of the English *cream* are accompanied by a parallel series beginning with a simple *r*. A.S. and Scotch, *ream*; Icelandic, *riumi*; Dutch, *room*; German, *rahm*, *cream*. . . . *Berning* liquor, frothing liquor. Then, as froth spreads like a mantle over the surface of a liquid, the *ryme* of the sea, the surface of the sea. The Icelandic *krim* is used to designate as well *rise*, or *hoar frost*, as *soot*, each of which forms a soft coating over bodies, like froth on the surface of water. The English *grime*, like *cream*, preserves the initial guttural; 'begrim'd with soot.' The German, *rahmcream*, is also applied to soot. (Schweizer).—*Wadsworth, Dictionary of English Etymology*.

**Creamy. adj.** Full of cream; having the nature of cream.

To the swart tribes their *creamy* bowls allow.  
*Collins, Ode on the Popular Superstitions of the Highlands*.

**Cream. s.** [?] Mark made by doubling anything.

Men of great parts are unfortunate in business, because they go out of the common road: I once desired Lord Bolingbroke to observe, that the clerks used an ivory knife, with a blunt edge, to divide paper, which cut it even, only requiring a strong hand; whereas a sharp penknife would go out of the *cream*, and disfigure the paper.—*Swift*.  
Not a *cream* was where it had no business to be.  
*Bliss Marner*, ch. ii.

**Cream. v. a.** Double, or fold, as a cream.

**Créatine. s.** [Gr. *κρῖς*, *κρέας* = flesh.] See extract.

Two substances have been recently detected in the urine. . . . These substances are *creatinine* and *creatinine*, designations which were inferred upon them from their presence in the 'juice of flesh,' of which they are the constant constituents, and from which they may be most readily obtained. *Creatine* is a neutral substance, presenting itself in the form of colourless transparent crystals. . . . It is very soluble in hot water. . . . It is of a bitter pungent taste; and irritates the pharynx. . . . The proportion which *creatinine* bears to the whole mass of flesh is very small, and is subject to considerable variation in different animals, as well as (probably) in different states of the same. . . . Although *creatinine* dissolves unchanged in dilute acids, it becomes converted by heating with strong acids into *creatinine*, giving off two equivalents of water. *Dr. Carpenter, Principles of human Physiology*, § 60.

**Créatine. s.** See extract, and also preceding entry.

Instance [*creatinine*], which also forms prismatic crystals, moderately soluble in water, differs considerably from *creatinine* in its chemical relations. . . . The relation of these two substances, both chemical and physiological, pretty clearly indicate that *creatinine* is to be regarded as a derivative from *creatinine*; for whilst the latter predominates in the juice of flesh, almost to the exclusion of the former, the former predominates in the urine almost to the exclusion of the latter.—*Carpenter, Principles of human Physiology*, §§ 60, 61.

—*Craw, History of English Literature*, l. 386.

On the contrary, the harmonious action of the parts subsists only by the influence of a force pervading all parts of the body. 'This force exists before the harmonizing parts, which are in fact formed by it during the development of the embryo.' And again: 'The *creative* force exists in the germ, and creates in it the essential force of the future animal. The germ is potentially the whole animal; during the development of the germ the parts which constitute the actual whole are produced.'—*Whewell, History of Scientific Ideas*, li. 210.

He had gained two kingdoms by statecraft, and a third by conquest; and he was still maintaining himself in the possession of all three in spite of both foreign and domestic foes. That these things had been effected by a poor creature, a man of ill ordinary capacity, was an assertion which might easily find *credence* among the nonjuring persons who congregated at Sam's Coffee-house, but which moved the laughter of the veteran politicians of Versailles. — *Macaulay, History of England*, ch. xx.

Hermes Trismegistus and Zoroaster were counterfeited in books which must were prone to take for genuine . . . which for more than a hundred years after this time obtained an undue *credence*, and consequently retarded the course of real philosophy in Europe. — *Hollan, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. 1, ch. 1, sec. 5, § 33.

*Credence*, . . . called also the prothesis [in] the small table at the side of the altar or communion-table, on which the bread and wine were placed before they were consecrated. . . . In many instances the place of the *credence-table* was supplied by a shelf across the fence-table or niche in which the placed. . . . The word also signifies a buffet, cupboard, or sideboard, where in early times the meats were tasted before they were served to the guests as a precaution against poison. — *Glossary of Architecture*.

This practice of the officiating priests setting the bread and wine in the sight of the people with reverence upon the Holy Table, was so invariably observed in ancient times, that they had in their churches a buffet or side-table, on the right or left hand of the altar, upon which a priest or deacon set the bread and wine. . . . This side-table for the elements and holy vessels was called in the Greek Church *prothesis*, because they were first set in public view upon it, and in the Latin Church 'paratorium,' because they were prepared and made ready upon it for the Holy Communion; and in Italy it is called 'credenza'; in France, *credence*, for the same reason, from the ancient Gothic or Teutonic *credan* or *credan*; in Saxon 'credan'; in Kilian, 'che-creden'; 'appareare,' 'ordinare,' to make ready, to prepare. Hence, the noun 'gardeins,' or 'credenceins,' 'gardeins,' or 'credenceins,' by contraction *credence*. — *Hilken, Two Treatises, &c., Prefatory Discourse*, lvi.: ed. 1711.

[This extract, courteously pointed out to the editor by Dr. T. Pratt of Doctors' Commons, must be considered with a view both to its argument and its authority; the latter being no less than that of the great Anglo-Saxon scholar of the last century. In favour of it are a great number of like catachrestic words, words of which *sparrow-grass* for *asparagus* is the type; some of which have not only a false derivation, but an explanation to match; this being, probably, the case with the *credence*,]

or poison-test, table of the first extract; for the existence of which special evidence, independent of the etymological inference, is required. Against it is the fact of the first syllable being *cred-* in the French, Italian, and German languages, as well as the English; *credence*, *credenza*, and *credenz*. Still, both France and Italy may have taken the word from Germany; while in Germany itself either the word may have been comparatively recent, or the English catechists may have repeated itself.]

square stands the symbolic statue which marks  
the freedom of jurisdiction and of commerce; im-  
balance in hand, to show the right of unimpeded  
traffic; sword in hand, to intimate the jus gladii,

free and pervious in every part, but that their sur-  
face be equal and smooth, and that they be lubri-  
cated with moisture, and that the moisture be not  
in excess. If the surface be unequal, rough, or un-  
lubricated, dry sounds reach the ear in the act of  
respiration; if there be excess of moisture, the  
sounds that reach the ear are those of air mingling  
with fluid. The dry sounds thus proceeding from

plied, and which would correspond to the degrees of  
a thermometer which are styled temperate, to the  
period of life which is called middle age, and is  
neither old nor young, to the *crepuscular* state,  
which is neither night nor day, and the like. *Sir

some of which are of doubtful character in

But when a whole nation is smitten with suspicion  
... what help is there? Such nation is already a

changed into glass; atrabilliar, decadent; and will

*criteria* of the different ranks of men's intellects,

tered facts which occur in conversation, or in the  
statements of men of business.—*Coleridge, Table

This settles truer ideas in men's minds of several things, whereof we read the names in ancient authors, than all the large and laborious arguments of *criticks*.—*Locke*.

With regard to Reviews and Magazines, the other important branch of the periodical press, the same observations as to their continuous character may be made as in the case of newspapers. They consist of a set of original *critiques* and essays, on literary, scientific, historical, political, and other subjects, which are written by contributors selected and employed by an editor, and are published at stated periods under his directions. The editor is in general unknown to the public; but the previous management of the Review, and the character which it has thus acquired, afford a reasonable ground for expecting that the selection of the papers for future numbers will be made on similar principles, and with equal discrimination. But in the larger rapacious birds, . . . which gorge themselves at uncertain intervals, . . . the oesophagus does not preserve a uniform width, but undergoes a lateral dilatation anterior to the furculum at the lower part of the neck. This pouch is termed the *involucrum* or *crop*. In these birds, namely, the food of which is exclusively of the vegetable kind, . . . the *crop* is more developed, . . . **Crossbiter.** *s.* [?—the doubt thus suggested,  
that the word is not a simple compound  
of *cross* and *bite*, arises out of the fact of  
its being found in Trevisa as *grysbiter*.]  
Cheat.

His company were lightly the lowliest persons in  
the land, apt for pilfering, perjury, forgery, or any  
villany. Of these he knew the cost to get at cards,  
cozen at dice; by these he learned the leggendary  
of nine, forty, coneycatchers, *crossbiter*, lifts, high  
lawyers, and all the rabble of that unclean genera-  
tion of vipers; and pitifully could he point out their  
whole course of craft; so cunning he was in all  
crafts, as nothing rested in him almost but crafti-  
ness.—*R. Greene.*

With much justice, for the excellent service he  
rendered to the commonwealth by his fearless ex-  
posure of the rogues of London; and it appears  
that it was a service of some danger, for the 'coney-

edly with threats of vengeance. *Id.*

**Crossbreeding.** *s.* Production of a change  
in physical conformation or disposition of  
an animal by influencing it through a dif-  
ference of blood or breed in one of its pa-  
rents; result of such a change; princi-  
ples of the process.

This gentleman [M. Malinje] being anxious to  
improve the old French breed by *crossing* it with  
an English ram, found that it took several genera-  
tions to effect his purpose. . . . On taking an ewe,  
the result of this French *crossing*, but still possess-  
ing all the peculiarities of her race, . . . and *crossing*  
her with a Leicester ram, the lambs at once showed  
the size, form, and disposition to fatten of their  
English sire. . . . This experiment, therefore, goes

to prove that the greater the purity (or antiquity)  
of the breed, the more likely it is to be represented  
in the cross. Consequently a bitch of pure blood  
. . . if put to a *cross-bred* dog, will throw puppies  
resembling herself in a much greater degree than  
the sire; and the reverse would happen if the sire  
were of pure blood than the dam. . . . This is only  
necessary when there has been much *crossbreeding*.  
. . . But much would depend upon the form or  
blood of the bitch, since she would be most likely to  
appropriate to herself, as it were, those particles  
which were most like herself and her progenitors  
in the compound or *crossed* station put to her.—  
*Blanchette, The Grigouard, ch. xix.*

**Crosscut.** *v. a.* Cut across; intersect.

ing.)

amining, by questions apparently captious,  
the faith of evidence in a court of justice.

His [Kirkland's] speaking was hardly more perfect  
than his examination of witnesses, the art in which  
so much of an English advocate's skill is shown;  
and his examination-in-chief was as excellent as his  
*cross-examination*; a department so apt to deceive  
the vulgar, and which yet generally speaking, far  
less available, as it hardly ever is more difficult,  
than the examination-in-chief, or in reply. In all  
these various functions, whether of addressing the  
jury, or urging objections to the court, or examin-  
ing his own witnesses, or *cross-examining* his  
adversary's, this consummate advocate appeared to  
fill at one and the same time different characters;  
to act as the counsel and representative of the party,  
and yet to be the very party himself.—*Lord  
Brougham, Historical Sketches of Statesmen of the  
Reign of George III., Mr. Erskine.*

**Cross-examine.** *v. a.* Try the faith of evi-  
dence by questions of the contrary party.

Aaron Smith, the Solicitor of the Treasury, whose  
character, to say the truth, entitled him to little im-  
munity, but passed, by thirty-five votes to twenty-  
eight, a resolution implying a censure on the Judges  
of the King's Bench.—*Macaulay, History of Eng-  
land, ch. xix.*

*cross-examine* the witnesses.—*Spectator.*

ing* of the bill was designed for this service.—*Der-  
ham, Physico-Theology.*

2. Act of signing with the cross.

How long might an indifferent eye look upon the  
convent and mimic actions in those your mysteries

Revels.*

you, good folks; and I am come to set you to rights.'

I proceed. . . . In another of Dr. Cullen's species of Cynanche. . . . viz. Cynanche trachealis—Tracheitis—*croup*. The essence of this complaint is violent inflammation, affecting the mucous membrane of that portion of the air passages which lies between the laryngeal cartilages and the primary bronchi, in our word of the trachea or windpipe. This is the genuine seat of the disease; but the inflammation sometimes extends into the larynx; and not unfrequently it dives into the bronchi, and into their ramifications. Besides the systematic term *crucianus*, and the French name *carassin*, this species in Sweden is called *karus*.

This particular *crucian* carp, for two species have hitherto been included under this name, is by far the rarer fish of the two.

There stands at the upper end of it a large crucifix, very much esteemed. The figure of our Saviour represents him in his last agonies of death.—*Addison, Travels in Italy*.

Another change, about the tenth century, came over the image of the Lord. It was no longer the mild Redeemer, but the terrible Judge, which painting strove to represent. He became the King of tremendous majesty, before whom shuddering, guilty, and reprobated mankind. The cross, too, by degrees, became the crucifix. The image of the Lord on the cross was at first meek, though suffering; pain was represented, but pain overcome by patience; it was still a clothed form, with long drapery. By degrees it was stripped to ghastly nakedness; agony became the prevailing, absorbing tone. The intensity of the suffering strove at least to subdue the sublime resignation of the sufferer; the object of the artist was to wring the spectator's heart with fear and anguish, rather than to chasten with quiet sorrow or elevate with faith and hope; to aggravate the sin of man, rather than display the mercy of God. Painting vied with the rude sculpture which arose in many quarters, (sculpture more often in wood than in stone,) and by the red streaming blood, and the more vivid expression of pain in the convulsed limbs, deepened the effect; till at last, that most hideous and repulsive object the painted crucifix was offered to the grovelling worship of mankind.—*Milman, History of Latin Christianity*, b. xiv. ch. 2.

**Cryptogamia.** *s.* In Botany. Class so called. See extract.

The artificial system, deservedly in most general use, is that invented by the celebrated Linnæus, and which commonly bears his name, as the Linnæan arrangement of plants. It is based upon the number and relative position of the essential organs of the flower, in all those cases where these are distinctly present; while a single class is made to include all those plants which I have described in an earlier chapter as flowerless, but in which it was assumed by Linnæus that the reproductive parts were of the same nature, only of microscopic size. Of this twenty-four classes, twenty-three are devoted to the flowering plants; the last contains the whole of the flowerless tribes. The more extended knowledge of these lower forms of plants in the present day has, in natural systems of plants, raised this last class, the Cryptogamia, or plants with hidden flowers, into a rank where it stands beside all the others collected into one, under the name of Phanerogamia, or plants with conspicuous flowers.—Huxley, *Radiments of Botany*, ch. v. sec. 2.

**Crystal.** *s.* [Gr. *κρυσταλλον*.] Solid of a definite form, assumed when certain bodies are deposited from a solution.

If the menstruum be overcharged, within a short time the metals will shoot into certain crystals.—Bacon.

Such a combination of saline particles as resembles the form of a crystal, variously modified, according to the nature and texture of the salts. The method is by dissolving any saline body in water, and filtering it, to evaporate, till a film appear at the top, and then let it stand to shoot; and this it does by that attractive force which is in all bodies, and particularly in salt by reason of its solidity; whereby, when the menstruum or fluid, in which such particles flow, is dried enough or evaporated, so that the saline particles are within each other's attrac-

tive powers, they draw one another more than they are drawn by the fluid, then will they run into crystals. And this is peculiar to those, that let them be ever so much divided and reduced into minute particles, yet when they are formed into crystals, they each of them resume their proper shapes; so that one might as easily divest them of their saltness, as of their figure. This being an immutable and perpetual law, by knowing the figure of the crystals, we may understand what the texture of the particles ought to be, which can form those crystals; and, on the other hand, by knowing the texture of the particles, may be determined the figure of the crystals.—Quincy.

In virtue of forces acting as this hypothesis assumes, a collection of small magnetic particles would arrange themselves in parallel positions; and such a collection of magnetic particles offers a sort of image of a crystal. Thus we are led to conceive the particles of crystals as polarized, and as determined in their crystalline positions by polar forces. This mode of apprehending the constitution of crystals has been adopted by some of our most eminent philosophers. Whewell, *History of Scientific Ideas*, i. 305.

The Greek  $\kappa$  becomes  $g$ , and so becomes  $cr$ , in English as in Latin, as crystal, colour. The constants  $x$  and  $y$  become  $c$  and  $ch$  before common usage. Hence we write crystal, not chrysal, batrachian, not batracian, cryolite, not chryolite.—Whewell, *Norman Organon renouveau*, p. 330.

2. In Mineralogy. Formed by crystallization.

In short, the most definite of the properties of perfect chemical compounds is their crystalline structure; and therefore it is evident that the crystalline structure of each body and the forms which it affects, must be in a most intimate dependence upon its chemical composition.—Whewell, *History of Scientific Ideas*, ii. 27.

We can, however, through one kind of molecular change, produce sensible changes of aggregation such as possibly might, when occurring in organic substance, cause sensible motion in it: I refer to allotropic change. Sulphur, for example, assumes different crystalline and non-crystalline forms at different temperatures, and may be made to pass backwards and forwards from one form to another, by slight variations of temperature; undergoing each time an alteration of bulk.—Herbert Spencer, *Data of Biology*, § 22.

Constructed for the most part of hard crystalline rock, decomposing or weathering by the constant action of the sea and weather, exposed to the incessant dash of the waves coming in from the Atlantic, which are thrown back by the coast of the Continent, only to meet a fresh arrival of others, all bound on the errand of destruction: the islands have been for countless ages beaten about, penetrated, rounded, broken, and carried away, leaving now only a few work of those limited barriers that have resisted the attack, and are enabled to present a bold and serious front against their relentless enemy.—Austen, *The Channel Islands*, p. 7.

3. Bright; clear; pellucid; transparent.

The royal star, then culminating, was the sun.—*Dryden, Vindication of the Duke of Gloucester*.

**Culminating**. *part. adj.* Attaining the highest point.  
It was an absolute renunciation of the severe discipline of the church, of that austere asceticism, which however the clergy and religious men alone could practise its angelic, its divine perfection, was the remote virtue after which all, even kings (so many of whom had exchanged their worldly robes for the cowl and for sacred cloth) ought to aspire, as to the ultimate culminating height of true Christianity.—*Milman, History of Latin Christianity*, ix. 2. ch. iii.

**Culmination**. *s.*  
1. Transit of a planet through the meridian.  
All the heavenly bodies culminate (i.e. come to their greatest altitude) on the meridian. . . . All celestial objects within the circle of perpetual apparition come twice on the meridian, above the horizon, in every diurnal revolution; once above and once below the pole. These are called their upper and lower culminations.—*Sir W. Herschel, Outline of Astronomy*, § 24, 128.

2. Top or crown.  
We upbraid the end with the beginning, the harvest with the spring, and wonder how that which in its putting forth was a flower, should in its growth and culmination become a thistle.—*Paradise, Sermons*, p. 429: 1637.

**Culpable**. *adj.* [Lat. *culpabilis* = blamable, from *culpa* = fault.]  
1. Blamable; blameworthy.  
The wisdom of God stretch'd before us in Scripture so many admirable patterns of virtue, and no one of them, without somewhat noted wherein they were culpable; to the end that to him alone it might always be acknowledged, Thou only art holy, Thou only art just. *Hooker, Ecclesiastical Polity*.

All such ignorance is voluntary, and therefore culpable; for as much as it was in every man's power to have prevented it.—*South*.

To name the thing that woman most desir'd. *Dryden.*  
An author is in the condition of a *culprit*; the  
public are his judges: by allowing too much, and  
condescending too far, he may injure his own cause;  
and by pleading and asserting too boldly, he may  
displease the court. *Prior, Preface to Solomon.*

to improve it, we must entertain hopes of the richest  
harvest. — *Elton, Dissertation on reading the Classicks.*

2. Improve; meliorate.

Were we but less indolent to our faults,  
And patience had to *cultivate* our thoughts,

vators* of clover-grass, that from a great quantity of  
the seed not any grass springs up. — *Bryce.*

Both these causes have retarded the creation of  
the science of history. The most celebrated historians  
are manifestly inferior to the most successful *culti-  
vators* of physical sciences: no one having devoted  
himself to history who in point of intellect is at all  
to be compared with Kepler, Newton, or many others

which had been employed in its *culturo*. — *Hallam, Constitutional History of England, vol. i, ch. i.*

**Culturo. v. a.** Cultivated: (chiefly used in  
the *participial* form).

In countries *culturo'd* high,

**Cúpola. s.** [Italian.] Dome; hemispherical summit of a building.

The caravanserai was very neatly built, adorned with cupolas at top.—*Sir T. Herbert, Relations of some Years' Travels into Africa and the Great Asia*, p. 118.

Nature seems to have designed the head as the cupola to the most glorious of her works; and when we look at it with superlunary ornaments, we destroy the symmetry of the human figure.—*Addison, Spectator*.

The M. Sophia of Constantine was raised to the ground in a fierce tumult; but on its site arose the new M. Sophia, in the East the pride, in the West the wonder, of the world. The sublime unity and harmony of the design, above all the lightness and vastness of the cupola, were too marvellous for mere human science. Even the skill of the famous architects Anthemius of Tralles and Isidore of Miletus were unequal to the conception. An angel revealed to the emperor (Justinian himself must share in the glory) many of the forms of the building; the great principle of the construction of the cupola, sought in vain by the science of the architects, flashed across the mind of the emperor himself in a dream. The cupola did not seem, according to the historian Procopius, to rest on its supports, but to be let down by a golden chain from heaven. Santa Sophia was proclaimed by the West as the most consummate work of Christian architecture.—*Milman, History of Latin Christianity*, b. xiv. ch. viii.

On he flared  
From stately nave to nave, from vault to vault,

There are often injuries of particular parts of the hock-joint. Curb is an affection of this kind. It is an inflammation at the back of the hock, three or four inches below its point. . . . It is either a strain of the ring-like ligament which binds the tendons in their place, or of the sheath of the tendons; or, tender, however, of the ligament than of the sheath. Any sudden action of the limb of more than usual violence may produce it, and therefore horses are found to throw out curbs, after a hardly contested race, an extraordinary leap, a severe gallop over heavy ground, or a sudden check in the gallop. . . . Cutis. s. [Latin; though, perhaps, in Medicine naturalized.] Skin; true skin, or corium: (as opposed to the cuticle or epidermis).

The skin may be considered as composed of three elements, namely, the complex, fibrous tissue, which with blood-vessels, lymphatics, and nerves makes up

the *cutis vera* or corium; a layer of basement-membrane investing this, and an epithelial investment of peculiar thickness and tenacity which is known as the epidermis or cuticle. . . . The *cutis*, however, not only possesses elasticity, but is endowed with vital contractility. — *Dr. Carpenter, Principles of Human Physiology*, § 236.

**Cutlass.** *s.* [Fr. *cutelas*.] Proud cutting sword, chiefly used at sea.

To the labours of his herd he run,  
Where the fat porkers slept beneath the sun;  
Of two his *cutlass* launch'd the spouting blood,  
These quarter'd, sing'd, and fix'd on forks of wood.

Mores, in his curk dissertation on letterfound-  
*ness*, as it seems, a *correctness*, among  
the antique typographical ornaments. — *T. Norton, Notes on Milton*.

**Cutter.** *s.* One who makes or sells knives.

About a hoop of gold, a paltry ring,  
That she did give me; whom poetry was  
For all the world like *cutter's* poetry  
Upon a knife: 'Love me, and leave me not.'

In a bye *cutler's* shop he bought a tuppenny  
knife; so cheap was the instrument of this great  
attempt. — *St. H. Walton*.

He chose no other instrument than an ordinary  
knife, which he bought of a common *cutler*. — *Lord Clarendon*.

Every smith, every carpenter, every *cutler*, was at  
constant work on curus and blades. — *Macaulay, History of England*, ch. xii.

**Cutlery.** *s.* Hardware sold or made by cutlers.

He is the more blamable because, long before he  
was born, both Locke and North had taught that it  
was absurd to make laws fixing the price of money  
as to make laws fixing the price of *cutlery* or of bread-  
cloth. — *Macaulay, History of England*, ch. xxi.

**Cutlet.** *s.* Small steak; properly, rib.

No mutton *cutlets*, prime of mutton. — *Swift*.  
I did hope to persuade him to come over and take  
a *cutlet* with me, and meet two or three of the 18th,  
who, as of course you know, are quarter'd there.  
*Theodore Hook, Gilbert's Grammar*, vol. i, ch. iv.

Our children are perfect little Pythagoreans.  
They have no notion how the subt  
a creature that ever had life can become food for  
another creature. A beef-steak is an absurdity to  
them; a mutton-chop, a *soisson* in terms, a *cutlet*,  
a word absolutely without any meaning; a butcher  
is nonsense, except so far as it is taken for a man  
who delights in blood, or a hero. — *Laub, On the Innate  
Indulgence of the Palate*.

**Cutpurse.** *s.* One who stole by the method of  
of irises (a common practice  
when men wore their purses at their  
girdles, as was once the custom); thief;  
robber.

To have an open ear, a quick eye, and a nimble  
hand, is necessary for a *cutpurse*. — *Shakespeare, Winter's Tale*, iv. 3.

If we could imagine a whole nation to be *cut-  
purses* and robbers, would there then be kept that  
square dealing and equity in such a monstrous den  
of thieves. — *Bentley, Remains*.

**Cutter.** *s.*

1. One who, or that which, cuts: (generally  
the second element in a compound, as *stone-  
cutter*).

Applied to persons.

Never saw I flourish  
So likely to report themselves: the *cutter*  
Was, as another nature, dumb.

He who is called the *cutter*, or dissector, with an  
Ethiopian stone cuts away as much of the flesh as  
the law commands. — *Greenhill, Art of Embalming*,  
p. 213.

Applied to things.

Small as this indispensable chamber seems to  
have been in all the houses of Pompeii, it was,  
nevertheless, usually fitted up with all that amazing  
variety of stoves and stoves, stoves and stoves,  
*cutters* and moulds, without which cook of  
spirit, no matter whether he be an ancient or a modern,  
declares it utterly impossible that he can give  
you anything to eat. — *Sir E. L. Balfour, Last Days of Pompeii*, b. iv, ch. ii.

2. Light ship's boat, or one-masted smyck  
rigged vessel, so called.

Their force consisted of twenty sail of the line,  
three fifty-gun ships, five frigates, and two brigs;  
his, of fifteen line-of-battle ships, two frigates, a  
*cutter*, and a lugger. — *Southey, Life of Nelson*, i.  
220.

3. Incisor, or cutting, teeth.

The molars or grinders are behind, nearest the  
centre of motion, because there is a greater strength  
of force required to chew the meat than to bite a  
piece: and the *cutter* before, that they may be

ready to cut off a morsel from any solid food, to be  
transmitted to the grinders. — *Ray, Wisdom of God  
manifested in the Works of the Creation*.

4. Russian.

Another story came into my mind of a thief, or  
rather a *cutter* by the high way, infinitely more  
resolute than the former. — *World of Wonders*, p.  
108.

**Cutter off.** Destroyer.

Indeed, there is, fortune too hard for nature,  
when fortune makes nature's natural the *cutter off*  
of nature's wit. — *Shakespeare, As you like it*, i. 2.

**Cutthroat.** *s.* Russian; murderer; butcher  
of men; assassin.

Will you then suffer these robbers, *cut-throats*,  
base people gathered out of all the corners of Christ-  
endom, to waste your countries, spoil your cities,  
murder your people, and trouble all your seas. —  
*Kaehler, History of the Turks*.

Perhaps the *cut-throat* may rather take his copy  
from the Parisian massacre, one of the horridlest in-  
stances of barbarous inhumanity that ever was  
known. — *South*.

They had tried to blast his honour and to exclude  
him from his birthright: they had called him in-  
diary, *cut-throat*, poisoner: they had driven him  
from the admiralty and the privy council. — *Macau-  
lay, History of England*, ch. vii.

Used adjectively.

If to take above fifty in the hundred be extremity,  
this in truth can be none other than *cut-throat* and  
absolutely dealing. — *Carew, Survey of Cornwall*.

The Russian robbers by no justice w'd.  
And unpaid *cut-throat* soldiers are abroad;  
Those vital souls, who, harden'd in each ill,  
To save complaints and prosecution, kill.

*Byron, Jernard's Satires*.

**Cutting.** *part. adj.* Sarcastic; acriminous;  
severe.

God bless . . . here comes the duke of Stilton,  
 . . . who told me . . . he could make a very good  
dinner off a beef-steak! Why the deuce, then, did he  
come and dine with me? Could he have said any-  
thing more *cutting*? — *Sir E. L. Balfour, Pelham*,  
ch. lvi.

But he always smiled; and audacious, cool, and  
*cutting*, and very easy, he thoroughly despised man-  
kind, upon whose weaknesses he practised without  
remorse. — *Disraeli, the Gaiety, Horatia Temple*,  
ii. 15.

The morals of Sedley were such as, even in that  
age, gave great scandal. . . . He was prosecuted for a  
misbehaviour, was sentenced to a heavy fine, and  
was reprimanded by the court of king's bench in  
the most *cutting* terms. — *Macaulay, History of Eng-  
land*, ch. vi.

**Cutting.** *s.*

1. Incision.

Ye shall not make any *cuttings* in your flesh for  
the dead, nor print any marks upon you. — *Leviticus*,  
xix. 28.

2. Piece cut off; chop.

The burning of the *cuttings* of vines, and casting  
them upon land, both much good. — *Bacon, Natural  
and Experimental History*.

3. Caper; curvet: (with the sense it has in  
*cut a caper*).

Some birds make a better show of their counte-  
nances in these dances, wherein are divers changes,  
*cuttings*, turnings, and mutations of the body, than  
in some dances of staid and gravity. — *Florio, Trans-  
lation of Montaigne's Essays*, p. 225.

4. Division, as of a pack of cards. See the  
eleventh sense of Cut.

It is here said, there has been much *cutting* and  
*cutting* in England, and we do not understand what  
or who is turned up trump. — *Letter to A. Hill, in  
Hill's Familiar Letters*, p. 200: 1650.

5. In Gardening. Portion of a plant taken  
off for the purpose of propagation.

Propagation by *cuttings* has been long known,  
and is abundantly simple when applied to such free-  
growing hardy shrubs as the willow or the rose-  
berry; but considered as the chief mode of propa-  
gating most of the Ericaceæ, Myrtaceæ, Proteaceæ, &c.,  
it becomes one of the most delicate and difficult  
modes of continuing the species. — *London, Encyclo-  
pædia of Gardening*, p. 65.

**Cuttle.** *s.*

1. Cephalopodous mollusk of the genus *Sc-  
pia*; squid.

It is somewhat strange, that the blood of all birds  
and beasts, and fishes, should be of a red colour, and  
only the blood of the *cuttle* should be as black as  
ink. — *Bacon*.

2. Foul-mouthed fellow; fellow who blackens  
the character of others.

Away, you *cutpurse* rascal; you filthy bung,  
away; by this wine I'll thrust my knife in your  
mouthy clamps, if you play the *cuttle* with me.  
— *Shakespeare, Henry IV. Part II*, ii. 4.

**Cuttle.** *s.* [from Fr. *cutteau*.] Knife. *Oh-  
solete*.

Disseminating himself with a sharp *cuttle*. — *Bale,  
Acts of English Vintners*, b. ii, ch. ii.: 1550.

**Cuttle-bone.** *s.* Internal shell, or part of  
the cuttlefish: (in the following extract we  
have, probably, two words and an adjecti-  
val construction, rather than a true com-  
pound).

The bone or shell is thick, but depressed . . . the  
substance of the *cuttle-bone* is composed of numerous  
testaceous laminae, separated from each other by a  
perpendicular fibrous calcified tissue, exhibiting a  
shining white and satiny lustre, and having a pumice-  
stone aspect and feel. . . . The bone (often used for  
pointers) equals in length the body without the fin.  
— *Forbes and Hanley, British Mollusca*.

**Cuttlefish.** *s.* Same as Cuttle.

He that uses many words for *the* explaining any  
subject, doth, like the *cuttle fish*, hide himself for  
the most part in his own ink. — *Ray, Wisdom of God  
manifested in the Works of the Creation*.

Among the higher aquatic invertebrates, — *cuttle-  
fishes* and lobsters, for instance, — there is a very con-  
siderable power of locomotion; and the aquatic  
vertebrates are, considered as a class, much more ac-  
tive in their movements than the other inhabitants  
of the water. — *Herbert Spencer, Lectures on Bio-  
logy*.

**Cutwork.** *s.* Openwork in embroidery: (used  
adjectively in the first extract.) *Obsolete*.

It graz'd on my shoulder, takes me away six pith,  
of an Italian *cut-work* band I wore, cost me three-  
pound in the Exchange but three days before. — *B.  
Johnson, Every Man out of his Humour*.

Then his hand  
May be disorder'd, and transform'd from lace  
To *cut-work*. — *De Witt and Fletcher, Coromation*.

**Cy-**, like *Cou-* and *Co-*, which have gone be-  
fore, is a combination which gives the ini-  
tial syllable of a definite and natural class  
of words, and, as such, demands a certain  
amount of preliminary notice. The first  
and most general statement concerning it  
is, that the words which begin thus are, one  
and all, of Greek derivation. They need  
not be *originally* Greek, because there are  
several words which, though Greek is the  
first language in which we find them, may  
have been adopted by the Greeks from  
other languages. Still, the language which  
gives them their sound and orthography is,  
in the first instance, Greek. It is submitted  
that, for reasons which will soon appear,  
this rule is absolute.

The next is, that all such words, how-  
ever Greek they may be in the form  
under which they are introduced into the  
English language, are *not* Greek in their  
immediate or direct origin. They are,  
one and all, words which having been pre-  
viously Greek were next Latin, and which,  
after having been Latin, were finally Angli-  
cized.

This introduction through the Latin  
may have been in one of two ways. It  
may have been from the Latin direct; or,  
indirectly, through the Italian, Spanish, or  
French offshoots of the Latin. As far as  
the form in English is concerned, the re-  
sult is the same whichever view we take.

The *c* in Latin represents a Greek *κ*;  
the former being sounded in English as *k*,  
the latter as *k*: a fact which bears upon  
certain points of pronunciation. Also, the

Latin *y* represents a Greek *γ*, the sound of  
which, even in English, is that of the *oo*  
in *tooth*. This *y*, in English, is sounded  
as either the *i* in *pit* and *pike*, or the *ee*  
in *sweet*. Hence the phonetic transforma-  
tion is from *kou-* to *si-*, and hence the  
rule that it is only through a Greek origin  
and a Latin medium that any word in  
English can begin with *cy-*; a fact which  
rules the spelling, and excludes more than  
one word of uncertain origin; such as  
*cipher* (rather than *cypher*) and others.

The question now arises as to the form which should be taken by words derived directly from the Greek, as in the case of several scientific terms of modern coinage; words which, though in some instances they may come into the English from the French or some other derivative of the Latin, never came into it through the Latin. Such a word is *Cytoblast*, as opposed to *Cycle*. The answer on this matter is, that the *Latin form is adopted and extended*; and that even when, in words like *Esthetics*, *Economy*, &c. (see remarks on *Æ*), it is departed from, the inconsistency is apparent only: the following being the chief points of difference between the two classes of words:—

1) In getting rid of *æ*, we get rid of an anomalous and extraneous letter; a letter neither really forming part of our alphabet, nor infinitely excluded from it. In *cy-* we merely retain what already exists.

2) In writing *c* for *æ*, we suggest no change of sound. In writing *ku* for *cy*, we suggest a change in certain old and well-established words, e.g. *cycle* and *cylinder*.

**Cyanogen.** *s.* [See extract.] In *Chemistry*. Biuret of nitrogen. (It has *Cyanide*, *Cyanuret*, and other congeners.)

This gaseous compound was discovered in 1815 by Gay-Lussac, and termed *cyanogen* (from *kyanos* blue, and *gēnes*, I generate) in consequence of its being essential in the formation of Prussian blue.—*Brand, Manual of Chemistry*, p. 583.

**Cycadaceous.** *adj.* [Lat. *cycas*, *cycad-us*; Gr. *κύκας*.] In *Botany*. Belonging to the natural order Cycadaceæ, chiefly represented by the genera *Cycas* and *Zamia*, the pith of which plants supplies the sago of commerce. See *Sago*.

**Cyclamen.** *s.* [Lat. from Gr. *κύκλινος*.] In *Botany*. Sowbread (*Cyclamen europæum*), an indigenous plant; florist's flower so called, of which there are several kinds, as *C. persicum*, &c.

Thirdly, a kind of *epigram* or sow-bread.—*Bishop Saurin, History of the Royal Society*, p. 231.

Transplant autumnal *cyclamen* now, if you would choose their place. *Ecloga, Colendarium hortense*.

**Cycle.** *s.* [Gr. *κύκλος*—circle.]

1. Round of time; space at the close of which the same revolutions begin again; period.

We do more commonly use these words, so as to style a lesser space a *cycle*, and a greater by the name of *period*; and you may not improperly call the beginning of a large period the epocha thereof.—*Hobbes, Discourse concerning Time*.

Given the year of the Julian period, those of the subordinate *epochs* are easily determined as above. Conversely, given the years of the solar and lunar *epochs*, and of the indiction, to determine the year of the Julian period proceed as follows:—Multiply the number of the year in the solar *epoch* by 4845, in the lunar by 4900, and in the *epoch* of the indiction by 4216; divide the sum of the products by 7980, and the remainder is the year of the Julian period sought. *Sir W. Herschel, Outlines of Astronomy*, § 925.

It is not our choice to try these and other modes of obtaining a science of the weather: that is, we may refer the phenomena to the idea of time, introducing the conception of a *cycle*;—or to the idea of external force, by the conception of the moon's action; or to the idea of mutual action, introducing the conceptions of thermometrical and atmospheric agencies, operating between different regions of earth, water, and air. It may be asked, How are we to decide in such alternatives? How are we to select the one right idea out of several conceivable ones? To which we can only reply, that this must be done by trying which will succeed. If there really exist a *cycle* of the weather, as well as of bellows, this must be established by comparing the ascertained *cycle* with a good register of the seasons, of sufficient extent.—*Herschel, Novum Organon renovatum*, b. iii. ch. v. sect. 2, § 5.

2. Calendar.

We thought we should not attempt an unacceptable work, if here we endeavour to present our gardeners with a complete *cycle* of what is requisite to be done throughout every month of the year.—*Ecloga, Colendarium hortense*.

3. Orbit. See *Epicycle*.

How build, unbuild, contrive  
To save appearances; how gird the sphere  
With contrick and eccentric, scribble our  
*Cycle* and *epicycle*, orb in orb!

*Milton, Paradise Lost*, viii. 881.

4. In *Literature*. Subject matter for poetry, consisting of several actions and heroes, connected with a main one; such as, in the poetry of ancient Greece, those connected with the Trojan and Theban wars, the Argonautic expedition, and other materials for narrative and epic poetry. In modern literature, the chief analogues of these are the legends of King Arthur and the Round Table, the Spanish expedition of Charlemagne, and the story of the Nibelungs. See *Cyelic* and *Cireler*.

Their superstition has more of inferior belief and less of ornamental machinery than those to which the *Annals de Gaul* and other heroes of the later *epochs* of romance furnished a model.—*Hallam, Introduction to the Literature of Europe in the fifteenth sixteenth, and seventeenth centuries*, pt. I. ch. ii. § 57.

Far be it from us, meanwhile, to venture rashly, or farther than is needful, into that same traditional chaos, fondly named the *Cycle of Northern Fiction*, with its fourteen sections (or separate poems), which are rather fourteen shornless limbs where we hear of pieces containing 'a hundred thousand verses,' and 'seventy thousand verses,' as of a quite natural affair. . . . The principal mythos . . . floats too vaguely on the breath of men; each successive singer and redactor furnishes it with new personages, new scenery, to please a new audience; each has the privilege of invention, and the wider privilege of borrowing and new-modelling from all that preceded him.—*Carlyle, Miscellaneous, The Nibelungen Lied*.

**Cycle.** *s. n.* Recur in cycles.

It may be that no life is found,  
Which only to one enemy bound  
Falls off, but *epochs* always round.

*Tennyson, The Two Voices*.

**Cycle.** *adj.* Connected with a cycle, generally in the sense it bears in *Literature*: (from the difference in respect to originality between the poet who first wrote upon a subject capable of being developed into a cycle, and those who merely expanded it, the term was not always a complimentary one). See *Cireler*.

The Homer of this race of *cycle* poets was to be an Italian. It was not till these poems had sunk into popular tales . . . that they were seized first by the bold and accomplished Boccaccio, afterwards by the inimitable Ariosto, and in their full ancient spirit, yet with some fine modern irony, bequeathed to mankind in the most exquisite and harmonious Italian.—*Wilson, History of Latin Christianity*, b. xiv. ch. vi.

**Cycloid.** *s.* [Gr. *κύκλος*—resembling a circle.] Curve described by a point in the circumference of a circle which rolls along a straight line till it has completed a revolution.

A man may form to himself the notion of a parabola, or a *cycloid*, from the mathematical definition of those figures. *Reid, Inquiry into the human Mind*.

**Cycloid.** *adj.* Having the character of a cycloid; subcircular: (one of its special applications is in *Ichthyology*, where it relates to the scales of fishes like the carp, dace, and, indeed, the majority of the existing osseous species. The classification founded by Agassiz on this, along with three other terms, Ctenoid, Ganoid, and Placoid, is important in *Geology*; the external covering being, in many cases, the chief means we have for determining the character of a fish when fossilized).

I described the organic structure of these so-called ganoid scale bones in 1810, in both recent and extinct fishes, showing that it militated against the theory of development by successive deposition of layers being applied, at least, to ganoid scales. A like organisation prevails in the tri-radiate dermal bones which support the strong spines of the *Diodon*; a *tri* in the usually unimbricated, less regularly formed, and arranged, dermal placoid scales of sharks and rays. The thinner subtransparent scales of ordinary osseous fishes are either sub-circular and with entire margins as in the carp, when they

are called *cycloid*, or have the outer and hinder margin denticated or spined, as in the perch, when they are called *denticulate*. We have seen that the primary classification of fishes in the system of M. Agassiz is based on these various modifications of the dermal skeleton. *Cygn, Lectures on Comparative Anatomy*, lect. vi.

**Cycloid.** *adj.* Having the character of a cycloid.

Hence, despite the beauty of Huyghens' invention, we have been obliged to abandon his flexible *cycloid* pendulum, and now exclusively make use of a rigid pendulum, restrained to describing only small arcs. *Smith and Grant, Translation of Arcton's Popular Astronomy*, b. II. ch. x.

**Cyclometry.** *s.* Art of measuring cycles or circles.

I must tell you, that Sir H. Savile had confuted Joseph Needham's *conjecture*. *Wallis, Two Corrections of Hobbes*, p. 116; 1656.

**Cyclops.** *s.* New word from Gr. *κύκλος*, as this word, though at present but imperfectly naturalized, is a necessary one, the present spelling is suggested on the precedents *doublet*, *typhoon*, *bulloon*, and others.] Rotatory storm.

Frequently combination occurs, and dynamical effects are produced in proportion. The case is particularly evident in the meetings of tropical and polar winds (by the west), by their subsequent continuance in strength as mixed winds, and by the concurrence or combination of *epochs*. Successive, or rather consecutive, variations, circuits, or *epochs*, often affect one another, acting as temporary mutual checks, until a combined and joint action occurs; their union causing their much greater effects, as may be seen even in water-currents as well as in the atmosphere itself. *Lord Ashburton, Address to the Geological Society*, 1862.

**Cyclopean.** *adj.* Having the character of a Cyclops. (One of its chief special applications is in *Architecture* and *Archæology*, where it means, consisting of large rough-hewn or unhewn masses of stone, fitted together without cement, such as in Greece and Italy suggested the notion of the ruins in which they were found having been the work of the Cyclopes.)

The *cyclopean* furnace of all wicked fashions, the heart, calls my speech to it.—*Bishop Hall, Sermons, Fashions of the World*.

**Cyclopede.** *s.* See *Encyclopedia*.

Heavy penalties were imposed on those academics, who relinquished the sacred text, to explain the tedious and unedifying commentaries on Peter Lombard's scholastic *cycle* of divinity, called the *Sentences*, which alone were sufficient to constitute a moderate library.—*T. Warton, History of English Poetry*, ii. 450.

**Cyclopædia.** *s.* See *Encyclopedia*.

**Cyclopic.** *adj.* Having the character of a Cyclops; savage.

Sending a bill of defiance to all physicians, chirurgeons, and apothecaries, as so many bold giants, or *cyclopic* monsters who daily seek to fight against heaven by their rebellious drugs and doses! *J. Irving Taylor, Artificial Hæmorrhoids*, p. 53.

**Cyclops.** *s. pl. Cyclopi.* [Gr. *κύκλος*—circle, *ὤψ*—eye; Lat. *Cyclops*.] Giant of the Greek mythology so called. (The Cyclopes are described as huge misshapen monsters inhabiting Sicily, with one eye, and that in the middle of the forehead. The word is entered on account of its derivatives Cyclopean and Cyclopic, rather than on its own merits, being a proper rather than a common name, and being Greek or Latin rather than English.)

**Cyclostome.** *s.* [Gr. *κύκλος*—circle, *στόμα*—mouth.] In *Ichthyology*. Fish (like the lamprey) with a mouth formed for sucking.

The primitive spermatie cells, which are persistent in the *cyclostomes*, have converted into tubes in osseous fishes.—*Owen, Anatomy of Vertebrata*.

**Cygnets.** *s.* [Lat. *cygnus*; Gr. *κύκνος*.] Young swan.

I am the *cygnet* to this pale faint swan,  
Who chaunts a doleful hymn to his own death.

*Shakspeare, King John*, v. 7.

*Cygnets*, from grey, turn white.—*Bacon, Natural and Experimental History*.

Young *cygnets* are good meat, if fed with oats;

but fed with weeds, they taste fishy.—*Mortimer, Hushauder.*

**Cylinder.** *s.* [Lat. *cylinder*; Gr. *κύλινδρον*, from root of *κύλιω* = roll.] Body having two parallel flat surfaces and one circular. The quantity of water which every revolution does carry, according to any inclination of the cylinder, may be easily found.—*Bishop Wilkins.*

The square will make you ready for all manner of compartments, boxes, pedestals, blocks, and building; your cylinder for vaulted lugrets, and round buildings.—*Penhous.*

If one body be a sphere and another a cylinder, of equal height and diameter, the one will be exactly two-thirds of the other, let the nature and quality of the material be what it will.—*Mill, System of Logic*, iii. 8, § 1.

**Cylindric.** *adj.* Same as Cylindrical.

*Mimra striata* testatula, when several of the cylindrical striae are contiguous, and grow together into one sheaf, is called brushhorn ore.—*Pandour, Essay towards a Natural History of the Earth.*

**Cylindrical.** *adj.* Partaking of the nature of a cylinder; having the form of a cylinder.

Obstructions must be most incident to such parts of the body where the circulation and the chafick fibres are both smallest, and these are glands, which are the extremities of arteries formed into cylindrical canals.—*Arbuthnot, On the Nature and Choice of Aliments.*

**Cylindricule.** *s.* Small cylinder.

The posterior or outer layer of the retina consists of the cellular basis, supporting the stratum of *cylindricule*, standing vertically upon its concave surface, with the interbedded twin-tubiform corpuscles, both of which microscopic structures are more easily demonstrated in the present than in the higher classes of vertebrates. Each twin-corpuscle is surrounded by a circle of *cylindricule*.—*Owen, Anatomy of Vertebrates.*

**Cyma.** *s.* [from Gr. *κύμα* = wave.] In Architecture. See extract.

A moulding taking its name from its contour resembling that of a wave, being hollow in its upper part and swelling below. Of this moulding there are two sorts, the *cyma recta* just described, and the *cyma reversa*, wherein the upper part swells, whilst the lower is hollow. By the workmen these are called 'oaves'.—*Gill, Encyclopedia of Architecture*, p. 1001.

**Cymbal.** *s.* [Lat. *cymbalum*; Gr. *κύμβαλον*.] Musical instrument.

The trumpets, sackbuts, psalteries and flutes, Tabors and *cymbals*, and the shouting Brannins, Make the sun dance.—*Shakespeare, Coriolanus*, v. 4.

If mirth should fall, I'll busy her with cares, Silence her clamorous voice with louder wars; Trumpets and drums shall fright her from the throne, As sounding *cymbals* aid the lab'ring moon.

*Dryden, Aurengzebe.*

The Te Deum was sung with unwonted pomp; and the solemn notes of the organ were mingled with the clash of the *cymbal* and the blast of the trumpet.—*Macaulay, History of England*, ch. ix.

**Cyme.** *s.* [from Gr. *κύμα* = young shoot.] In Botany. See extract.

*Cyme* is a general term applied to all forms of inflorescence in which the terminal or middle flower-bud opens first, and all subsequent flowers must be axillary; sometimes the axils below produce pedicels or branches which bear only a single flower; sometimes each branch bears a terminal flower, but also produces lateral flowers in the axils of bracts. These secondary axils may again be branched, so that the pedicels are brought to the third degree, like those of the panicle or umbellule. The inflorescence which in each case is known by the terminal flower of the main stem, and of each main branch opening before their axillary buds, is termed, according to the appearance it presents, a racemose *cyme*, a panicle *cyme*, or a corymbose *cyme*; the latter is the most common, and occurs in the lawthorn and elder. The flowers of the pink kind are borne in *cymes* of various character, as are many of the gentians, the common centaury.—*Henfrey, Rudiments of Botany*, ch. iii. sect. 1.

**Cyme.** *s.* In Architecture. Same as Cyma.

**Cynaretomachy.** *s.* [Gr. *κύων* = dog, *μαχη* = battle.] Bear-baiting with dogs; (a word apparently coined by Butler).

That some occult design doth lye

In bloody *cynaretomachy*.

In plain enough to him that knows,

How saints lead brothers by the nose.

*Butler, Hudibras.*

**Cynogétiæ.** *s.* [Gr. *κυνγιήτινα*, from *κύων* = dog, and the root of *γιγνώσκω* = lead; the word being the title of a Greek poem by Oppian, on hunting, and, as such, a proper rather than a common name.] Art of

hunting; art of training and hunting with dogs.

There are extant in Greek, four books on *cynogétiæ*, or venation.—*Sir T. Browne, Vulgar Errors*.

**Cyno.** *s.* [Gr. *κυνικός* = doglike, from *κύων* = dog.] Philosopher of the snarling or curriah sort; follower of Diogenes; rude man; snarler; misanthrope.

Without these precautions the man degenerates into a cynic, the woman into a coquette; the man grows sullen and morose, the woman imperious and fantastical.—*Addison.*

Why call the miser miserable? as I said before: the frugal life is his, Which in a saint or cynic ever was. The theatre of praise: a laureat would not miss Canonization for the self-same cause. And wherefore blame gaunt wall's austerities? Because, you'll say, nought calls for such a trial;—Then there's more merit in his self-denial.

*Byron, Don Juan*, xii. 7.

Used adjectively.

How vilely doth this cynic rhyme!—Get you hence, sirrah; saucy fellow, hence.

*Shakespeare, Julius Caesar*, iv. 3.

**Cynical.** *adj.* Having the qualities of a dog; curriah; brutal; snarling; satirical.

It is possible for Diogenes his cynical sullenness to trample on Plato's splendid ornaments with more pride than Plato wore them.—*Jeremy Taylor, Artificial Happiness*, p. 104.

He doth believe that some new fangled wit (it is his cynical phrase) will some time or other find out his art.—*Bishop Wilkins.*

A far wilder speech was that of the dog-philosopher, who termed women necessary evils; of this cynical sect, it seems, was he who would make 'oaves' to be the anagram of 'aave'.—*Lowell, Familiar Letters*, iv. 7.

William doubtless read these words with one of those bitter and cynical smiles which gave his face its best pleasing expression.—*Macaulay, History of England*, ch. ix.

**Cynically.** *adv.* In a cynical manner.

**Cynicism.** *s.* Character, temper, state, or condition of a Cynic.

But this cynicism is for the most part affected, and serves only as an excuse for some hostile remarks on human nature in general.—*Hollis, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries.*

**Cynosure.** *s.* [Gr. *κύνος οφθαλμός* = dog's tail.]

1. Pole star (bright star in the Lesser Bear by which seamen used anciently to steer).

Their compass also is defective; . . . nor is the magnet, till of late, known amongst them; having the *cynosure* and use minor for their best directors.—*Sir T. Herbert, Relations of some Years' Travels into Africa and the Great Asia*, p. 377.

Used metaphorically.

For the guidance either of our caution or liberty, In matters of borrowing and lending, the only *cynosure* is our charity.—*Bishop Hall, Cases of Conscience*.

2. Point of attraction.

Towers and battlements it sees

Bosom'd high in tufted trees,

Where perhaps some beauty lies,

The *cynosure* of neighbouring eyes.

*Milton, Il Penseroso.*

**Cyperaceous.** *adj.* [Lat. *cyperus* = sedge.]

In Botany. Having the character of the sedges; belonging to, or constituting, the class of which the sedges are the chief representatives.

Above its straggling margins the ground is densely covered with heather, interspersed with swampy strips, bearing carices and other *cyperaceous* plants. . . . Marshy grounds, covered with *cyperaceous* plants and bog-sedges, and tufted with bog-myrtle, occur here and there.—*W. Macgillivray, Natural History of Iceland and Bruemar.*

**Cypress.** *s.* [Lat. *cypressus*.] Evergreen tree (*Cupressus sempervirens*) so called: (often used adjectively).

In ivory coffin I have stuff'd my crown;

In *cypress* chests my arms counterpane.

*Shakespeare, Twelfth Night of the Shrove*, ii. 1.

He taketh the *cypress* and the oak, which he strengtheneth for himself among the trees of the forest.—*Isaiah*, xlv. 14.

Poplars and alders ever quivering play'd, And nodding *cypress* form'd a fragrant shade.

*Spenser, The Faerie Queene*.

Being anciently used in funerals, it is the emblem of mourning.

Poison be their drink, Their sweetest shade a grove of *cypress* trees.

*Shakespeare, Henry VI. Part II.* iii. 2.

**Cypress.** *s.* [Cypress, where it was originally made.] Thin black transparent stuff.

Lawn as white as driven snow,

Cypress black as e'er was crow.

*Shakespeare, Winter's Tale*, iv. 3, song.

A *cypress*, not a bosom,

Hides my poor heart!—*Tit. Andronicus*, iii. 1.

Your picture—one half drawn

In solemn *cypress*, th' other colow'd lawn.

*B. Jonson, Epigrama.*

All in a robe of darkest grain, Flowing with majestic train, And sable stole of *Cypress* lawn, Over thy decent shoulders drawn.

*Milton, Il Penseroso.*

**Cypress(-wine).** *s.* Wine made in the island of Cypress.

The rich *Cypress* wine, which is so much esteemed in all parts, is very dear.—*Bishop Forceter, Description of the East and some Other Countries*, vol. ii. pt. 1, Cypress.

**Cyst.** *s.* [Gr. *κύστις*.] Bag containing some morbid matter. (Cæsson in Medicine, with two series of derivatives: (a) one from *cyst* in the sense of a bag, or bladder, in general; (b) the other from the same word in its more limited sense of urinary bladder.) See Encyclopædia.

There may be a consumption, with a purulent spitting, when the vomica is contained in a cyst or bag; upon the breaking of which the patient is commonly suffocated.—*Arbuthnot, On the Nature and Choice of Aliments.*

The common tapeworm of the cat, *Tænia crassicolis*, is remarkable for the disproportionate size of the head, the short and thick neck, the position of the four suckers, and the shape and number of the hooklets of the uncinated proboscis: all these peculiarities are repeated in the larval form of tape-worm which is commonly developed in cysts of the liver of the mouse and rat, and which has already been described as the *Cysticercus fasciolaris*.—*Owen, Lectures on Comparative Anatomy*, lect. v.

**Cystic.** *adj.* Contained in a bag.

The bile is of two sorts; the *cystic*, or that contained in the gall-bladder, a sort of repository for the gall; or the hepatic, or what flows immediately from the liver.—*Arbuthnot.*

The four orders of the class Entozoa which have already been described, are less natural than the order Nematodes. . . . The Cystica, Cystoides, Trematoda, and Acanthocephala, are far from being respectively equivalent to the order Nematodes, either as regards grade, difference, or circumscription of organic characters. The transition from the *cystic* to the tentoid Entozoa was so obvious and close, by the *Cysticercus fasciolaris*, for example, that they were combined in the same order Trematodes, in the Règne Animal.—*Owen, Lectures on Comparative Anatomy*, lect. vi.

The contents of the excretory sac consist usually of a colourless fluid containing many granules and vesicles; but sometimes it is filled by clear calcareous corpuscles like those found in the parenchyma of the cestoid worms and their *cystic* larvae. *Ibid.*

**Cysticle.** *s.* Small cyst.

In some Arachnida the *cysticles* are not complicated with pigment-cells. In the *Agaricus violaceus* the marginal tentacular interspaces are divided by a mamillary process, on each side of which are two *cysticles*, of an oval or spherical form, containing each two or three spherical corpuscles. In *Gezonia*, *Thaumantia*, *Oceania* and *Polyzenia* the *cysticles* are sessile upon the circular vessel, and placed between its inner and outer membranes: in *Pinacelophora* as in *Cynna*, each *cysticle* is placed at the extremity of a short double-walled tubular pedicle projecting downwards. . . . In *Cyphos* and *Ichnioma* the *cysticle* is placed in a notch between two lobe-like processes of the margin of the disc and looks upwards. On the upper surface a semicircular fold extends from one lobe to the other and covers the *cysticle*. The *cysticles* are below the marginal tentacles in *Thaumantia*, but alternate with them in the nearly allied *Geryonia*. The *cysticles* are yellow in *Pelagia noctiluca*, but colourless in *Cassiopea* and *Aurelia*, and the colourless pedunculate marginal *cysticles* of *Polyzenia leucostyla* contain each a single round corpuscle, whilst the *cysticles* of *Cyanea polydyla* contain a cluster of yellowish calcareous corpuscles. Will and Siebold regard these contained corpuscles as homologous with the oolites of higher animals and the *cysticle* as an organ of hearing.—*Owen, Lectures on Comparative Anatomy*, lect. ix.

**Cystis.** *s.* [Gr.] Same as Cyst.

In taking it out the *cystic* broke, and shew'd itself by its matter to be a melicaria.—*Wisserman, Surgery*.

**Cytisus.** *s.* [Lat. from Gr. *κύτις*.] Shrub of the order Leguminosæ, of which there

## CYTO

are several varieties, as the Portugal broom (*Cytisus albus*), common broom (*C. scoparius*), and others.

There tamarisks with thick-leav'd box are found; And cythons, and garden-pines abound. *Chagrove.*

**Cyblast.** *s.* [Gr. κύβηξ = vessel, and root of γαστήρ = bud or germinate.] Nucleus of the primary cell in vegetables when the cell is developed; corresponding element in animals. (In *Physiology*, it has *Cyblastema* and other derivatives.)

Schleiden has published some extremely interesting observations upon this body, which he regards as a universal elementary organ, and calls a *cyblast*. . . . In the interior of the *cyblast*, or sunk in its surface, is a small well-defined body. . . . The spindle varies in size from half the diameter of the *cyblast* to a point too small to be measured; and Schleiden

## CZAR

believes that this minute body is formed earlier than the *cyblast* itself.—*Lindley, Introduction to Botany*, vol. I. h. l. ch. 1.

He who measures the orbit of a comet, has not, therefore, higher faculties than he who examines the *cyblast* of a fungus.—*W. Macgillivray, Natural History of Decidua and Brucina*, p. 121.

**Czar.** *s.* [Polish form of the Russian title of the *Kaiser*, *Cæsar*, or *Emperor*. The Polish sound of *cz* is *ch*, i. e. *ts*.] Title of the emperor of Russia.

There were competitors, the czar of Muscovy's son, the duke of Newburg, and the prince of Lorraine.—*R. Browne, Travels in Europe*, p. 153.

Russia refused to consent to anything more than an armistice for two years, which was afterwards enlarged into a peace for thirty years; as the czar's attention was in the commencement of the eighteenth century principally directed to schemes of aggrandizement at the expense of Sweden.—*Sir E. S.*

## CZAR

*Creevy, History of the Ottoman Turks*, vol. II. ch. iv.

**Czarina.** *s.* Female czar; empress of Russia.

When Catherine Alexowna was made empress of Russia, the women were in an actual state of bondage. . . . Assemblies were quite unknown among them; the *czarina* was attended with introducing them; for she found it impossible to render them polite.—*Goldsmith, Essays*, 22.

In the emperor's manifestoes respecting the annexation of the Crimea, the Kulan, and the adjacent territories to Russia (which were published in April, 1783) the same spirit of grim humour was maintained with which Europe was already familiarised by the sayings and doings of the *czarina* and her confederates in the case of Poland.—*Sir E. S. Creevy, History of the Ottoman Turks*, vol. II. ch. viii.

**Czarian.** *adj.* Relating to the czar.

His *czarian* majesty dispatched an express.—*Tatler*, no. 55.

## D.

## DAB

**D.** The fourth letter of the English alphabet. For its import as a letter see *Dee*.

**Dab.** *v. a.* [see last extract.] Strike gently with something soft or moist.

A nose should never be wiped by drawing a piece of tow or rag over it, but only by *dabbing* it over with fine lint.—*Sharp, Surgery*.

[*Dab*, a slap on the face, a dirty clout; to *dab*, to slap or strike; to *dabble* (dutch, *dabbelen*, *dabbelen*—Kilian), to splash or stir about in the water and dirt.—*Halley*. The sound of a blow with something not resonant, as a lump of soft clay or a wet cloth, is represented by the syllables *dab*, *dib*, *dab*, as to *dab* a nose with a wet towel. The frequentative *dabble* represents the paddling sound of water agitated by the hands or feet. Then, as the same word which represents the noise of a blow is commonly applied to the instrument which produces it, *dab* is used to signify a small quantity of something soft, such a lump as may conveniently be thrown, as a *dab* of butter, of mortar, &c.; a *dabbl*, a very small quantity; a *dab-wash*, a small wash got up on a sudden. . . . A somewhat different application of the verb to *dab* gives the sense of pricking or striking a pointed instrument into a soft body. To *dab* in some parts of England is used, as *diddle* in others, for making holes in a furrow with a pointed stick for the planting of seed. To *dab*, to *dab*, to peck as birds, to prick.—*Johnson*. The thorn that *dabs* I'll cut it down, Though fair the rose may be.—*Weldwood, Dictionary of English Etymology*.]

**Dab.** *s.* [? *Adept*, in the sense of one who is master of his art; a *dab* hand, for the word is often used *adjectivally*, being opposed to a *pretence* hand, i. e. a learner.] *Adept*. *Colloquial*, or *slang*.

One writer excels at a plan, or the titlepage; another works away at the body of the book; and the third is a *dab* at an index.—*Goldsmith, Essays*, I.

**Dab.** *s.* [Lat. *dobula*.] Native fish so called. See *Dobule*.

Of *dab* fish there are rays, flukes, *dabs*, plaice.—*Curw*.

**Dabble.** *v. a.* *Dab*; splash.

A shadow like an angel, with bright hair Dabbled in blood. *Shakespeare, Richard III.* I. 4. I scarified and dabbled the wound with oil of turpentine.—*Wiceman, Surgery*.

**Dabble.** *v. n.* Play, or splash, in shallow water, mud, or slush, without going far out or swimming; hence, *figuratively*, do anything in a slight or superficial manner.

Neither will a spirit, that dwells with stars, dabble in this impure mud.—*Glennville, Apology for Philosophy*.

The little one complained of her legs, that she could neither swim nor dabble with them.—*Sir R. L'Estrange*.

But when he found the boys at play, And saw them dabbling in their clay, He stood behind a stall to lurk, And mark the progress of their work. *Swift*.

The story deserves the pen of my dear Smollett, who, I am sorry, disgraces his talent by writing

## DACT

those stupid romances, commonly called history. *Shakespeare* does worse, and *dabbles* in filthy politics, instead of making more *Lydians* for my entertainment. *Lady M. W. Montague, Letters*, 18: 1790.

With *with*.

*Shakespeare* shall be put into your hands, as clear and as fair as it came out of them; though you, I think, have been *dabbling* here and there with the text. I have had more reverence for the writer and the printer, and left everything standing.—*Bishop Atterbury, Letter to Pope*.

**Dabbler.** *s.* One who dabbles (in either the primary or figurative sense of that word).

He dabbles not complain of the tooth-ach, lest our *dabbler* in politics should be ready to swear against for disaffection.—*Swift*.

**Dabchick.** *s.* See *Didapper*.

As when a *dabchick* waddles through the reeds On feet and wings, and flies, and wades, and hops. *P. p.*

**Dace.** *s.* [?] Small native freshwater fish (*Cyprinus Leuciscus*) so called.

Let me live harmlessly, and near the brink Of Trent or Avon have a dwelling-place; Where I may see my quill or cork down sink, With eager hate of search, or bleak, or dace. *J. Walton*.

The *dace*, or, as it is sometimes called, the *large* or *barb*, is a fish of the *Cyprinidae* family, and is rather like the Roach both in habits and appearance, but the former is more local and less plentiful than the latter.—*Maudslayi, Treasury of Natural History*, p. 170.

**Dactyl.** *s.* [Gr. δάκτυλος = finger.] Metrical measure so called, consisting of a long syllable followed by two short ones (— ∪ ∪), and, as such, comparable to a finger with its one longer and two shorter joints. *Catinidius* in Latin, and the word δάκτυλος itself in Greek, are instances.

But stuck fast in his first hexameter, Not one of all whose guilty feet would stir, But ere the spinn'd *dactyls* could be stirred Into recitative, &c. *Byron, Vision of Judgment*, 90, 91.

**Dactyl.** *s.* Little, false, or would-be dactyle.

Whoever saw a colt, wanton and wild, Yoked with a slow-foot ox on fallow field, Can right need how handsomely belitt! Dull spondee with the English *dactyls*! If dove speak, English in a thundering cloud, Thick, thick, and rill-rill, runs he out aloud. *Bishop Hall, Satires*, vi.

**Dactylic.** *adj.* Characterized by, or having the nature of, dactyls.

The *dactylic* pronunciation by which three syllables must be constructed to two.—*Scott, Essays*, p. 120. (Ord MS.)

**Dactylist.** *s.* Writer whose rhythm is dactylic.

Dr. Johnson prefers the Latin poetry of May and Cowley to that of Milton, and thinks May to be the

## DAFF

first of the three. May is certainly a sonorous dactylist.—*T. Weyton, Preface to Milton's smaller Poems*.

**Dactylology.** *s.* [Gr. δάκτυλος = finger, λόγος = word, principle, reason.] Art of talking by the fingers.

Chirology, or *dactylology*, as the words import, is an interpretation by the transient motion of the fingers; which, of all other ways of interpretation, comes nearest to that of the tongue.—*Dalgarno, Deaf and Dumb Man's Tutor, Introduction*: 16:9. (Rich.)

**Dad, or Dadd.** *s.* [Welsh, *tad*; whence it is often considered a Keltic word: but it is also Frisian and Mesopotamic.] Father.

I was never so bethrump't with words, Since first I call'd my brother's father *dad*.

*Shakespeare, King John*, II. 3

His loving mother left him to my care; First child, as like his *dad* as he could stare! *Gay*.

**Dade.** *v. a.* See *extract*.

To *dade* is applied to the first vacillating steps of a child. To *dade* a child, to teach him to walk; *dading* strings, leading strings. It is in this sense that the word is used by Drayton. . . .

Which nourished and brought up at her most plentiful papp No sooner brought to *dade*, but from her mother trips. But easily from her source as Isis gently *dades*. (Drayton.)

To *dade* a child is then to teach him to walk, to lead him by the hand while he tottles or totters; *dading* strings, leading strings, by which he is held up while learning to walk. . . . In the nursery language of France *dada* is the name given to a horse, the type of activity in a child's imagination. *Dada*, a hobby-horse. *Dadada* in a more general sense is applied to all the proceedings of an infant. 'Souffrir à un enfant toutes ses *dadades*, to coddle or coddle him.—*Outgrave*. The frequentative to *dabble* or *diddle* is in use in the North of England and Scotland, signifying to walk unsteadily like a child. To *diddle* like a duck, to waddle.—*Johnson*. To *diddle*, *diddle*, *diddle*, are other variations.—*Wedgewood Dictionary of English Etymology*.]

**Dade.** *s.* [?] Waterbird so called, probably dabchick.

There's neither swallow, dove, nor *dade* Can wear more high or deeper wade; Nor show a reason from the stars What causeth peace or civil wars. *Lygal Garland: 1588*. (Nares by H. and W.)

**Dado.** *s.* [?] See *extract*.

*Dado* [is] the solid block or cube forming the body of a pedestal in classical architecture, between the base-mouldings and cornice; an architectural arrangement of mouldings, &c., round the lower part of the walls of a room, resembling a continuous pedestal.—*Glossary of Architecture*.

**Daff.** *v. a.* [? *daff* from *do* and *aff* = after; as *don*, *doff*, *dup* = *do* on, *do* off, *do* up.] To walk back; to *ass* aside. *Rare*.

The nimble-footed mad-cap prince of Wales, And his comrades, that *daff'd* the world, And bid it pass. *Shakespeare, Henry IV. Part I.*

I would have daffed all other respects, and made  
her half myself.—*Id.*, *Much Ado about Nothing*,  
ii. 3.

**Daffodil**. *s.* [Gr. *ἀνθέριος*; Lat. *asphodelus*.] Garden and native flower so called  
(*Narcissus Pseudo-Narcissus*).

The daughters of the flood have search'd the mead  
For violets pale, and cropp'd the poppy's head;  
The short narcissus, and fair daffodil,  
Pansies to please the sight, and cressets sweet to smell.  
*Dryden*.

**Daffodilly**. *s.* Same as Daffodil, but more  
colloquial.

Mid anemaranthus all his beauty shed,  
And daffodillies fill their cups with tears,  
To strew the laurest herse where Lycid lies.  
*Milton, Lycidas*.

**Daffodowndilly**. *s.* Same as Daffodilly,  
but more colloquial. *Vulgar, Rediculus*, or  
used with an affectation of simplicity.

Strew me the green ground with daffodowndillies,  
And cowslips, and kingcups, and loved lilies.  
*Spranger*.

No matter whether her hand is a lily, or a tulip,  
or a daffodowndilly.—*John O'Keefe, Pontalmeau*,  
ii. 3.

**Dag**. *s.* [see last extract.] Pistol.  
Whilst he would show me how to hold the dagge,  
To draw the cooke, to charge, and set the flint.  
*Jack Drum's Entertainment*, ii. 3.

(Nares by H. and W.)  
Neither was there anything taken from them but  
these *dags*, which the German horsemen, after a  
new fashion, carried at their middle-bows; these the  
Turks greatly admired, delighted at the novelty of  
the invention, to see them shag off with a stroke,  
without a scratch.—*Angler, History of the Turks*,  
p. 742.

What d'ye call this gun—a dag?  
*Beaumont and Fletcher, Love's Cure*, ii. 1.  
(Nares by H. and W.)

Powder! no, sir, my *dags* shall be my dagger.  
*Dexter, Whore of Babylon*. (Nares by H. and W.)  
[*Dag*.—*Dagger*.—*Daggle*. The syllable *dag* or *dis* re-  
presents the noise of a blow with something sharp,  
then the instrument with which the blow is given,  
or anything of similar form. Breton, *dagi*, to stab;  
Old English, *dag*, to pierce.

\*Deris d'ysys they dally with dagganle sperry.  
(Morte Arthure in Halliwell.)

French, *dague*; Italian, *daga*; English, *dagger*, a  
short stabbing weapon. Old English, *dag*, a small  
projecting stump of a tree; a sharp sudden pain.  
(Halliwell.) Then in the sense of slashing with an  
edged tool, 'pounced and dagged clothing.' 'So  
much dagging of shivers with the superiority in  
jangle of the forename gounes.' (Chaucer in Rich-  
ardson.) Hence, *dag*, a fragment of a slashed edge,  
a jaw or shred. *Dagge* of cloth, *fractilla*. (Promp-  
torium Parvulorum.) *Dagon*, a sieve. 'A dagon of  
your blanket, love dame.' (Chaucer.) *Dag-locks*,  
clotted locks hanging in dags or jaws at a sheep's  
tail. Finnish, *takka*, a shaggy fleece; *takka-aita*,  
dag-wool; *takkinen*, matted, shaggy, dagged. Old  
English, *dag-skein*, a bed-covering of shaggy ma-  
terial. 'Some *dagsweynes* have long thrums' (frac-  
tillon) and jaws on bothe sydes, none but on one'.  
(Hornman in Way.) *Daglets*, icicles, dags or jaws of  
ice. In *daggle*, to trail in the dirt (Halliwell), be-  
dagged, daggle-tail, there is perhaps a mixture be-  
tween the idea of hanging in dags in the wet and  
mire, and that of bedewing, soaking in the wet  
grass; Scotch, *dag*, dew, drizzling; Swedish, *dagg*,  
dew; Danish, *dagge*, bedew, to dew, bedew; De-  
vonshire, *dagget*, *dagget-leaked*, *daggle-tealed*, wet  
and with the tail of the garment dragged along in  
the dirt. (Ramsay scolding.) *Daggle-tailed* is a  
later introduction when the sense of *daggle* became  
obscure.—*Wedgwood, Dictionary of English Etymology*.]

**Dagger**. *s.* [Fr. *daguer*.]  
1. Short sword; poniard.  
She ran to her son's dagger, and struck herself a  
mortal wound.—*Sir P. Sidney*.  
This sword a dagger had his page,  
That was but little for his age;  
And therefore waited on him so,  
As dwarfs upon knights-errant do.  
*Butler, Hudibras*.  
He strikes himself with his dagger; but being  
interrupted by one of his friends, he slays him,  
and breaks the dagger on one of his ribs.—*Addi-  
son*.

2. In *Printing*. Mark in the form of a dag-  
ger (†), serving to refer the reader to a  
note or some other matter in the margin.  
**Daggerdrawing**. *verbal abs.* Act of draw-  
ing daggers; approach to violence; violent  
quarreling.  
They always are at daggerdrawing,  
And on another clapperclawing.  
*Butler, Hudibras*.

I have heard of a quarrel in a tavern, where all  
were at daggerdrawing, till one desired to know  
the subject of the quarrel.—*Swift*.

**Daggle**. *v. n.* [see *Dag*.] Dabble. (The idea  
of dragging connected with water, mire, or  
any other kind of impurity, lies at the bottom  
of this meaning. In the previous editions  
the definition is, 'dip negligently in mire or  
water; bemire; besprinkle;' the deriva-  
tion connecting the word with *dag* or *dew*.  
In Brockett's list of North-Country words,  
*dag* = drizzle. *Daglock*, however, pro-  
vincial for the befouled locks that hang  
about a sheep's tail, connects it with some-  
thing hanging pendent, or swinging about  
as a tag.)

Nor like a puppy, daggled through the town,  
To fetch and carry sing-song up and down. *Pope*.

**Daggle-tailed**. *adj.* Clogged behind with  
water, mud, or filth.

The gentlemen of wit and pleasure are apt to be  
choaked at the sight of so many daggle-tailed parsons  
that happen to fill in their way.—*Swift*.

**Daglock**. *s.* See Daggle.

**Dagswain**. *s.* [? for a probable origin of  
the first syllable see *Dag*? that of the  
second being uncertain.] Sort of blanket.

Our fathers, yea, and we ourselves also, have been  
fall often upon straw pallets, or rough mats, cov-  
ered only with a sheet under coverlets made of  
*dagswain*.—*Harrison, Description of Britain*, pre-  
fixed to *Hollinshead's Chronicle*.

**Dag-tailed**. *adj.* Daggle-tailed: (in the fol-  
lowing extract, clogged with daglocks).

Would it not vex thee, where thy mires did keep,  
To see the dumpled folds of dag-tailed sheep.  
*Bishop Hall, Natives*, v.

**Daguerreotype**. *s.* [*Daguerre*, the inventor.]  
Photographic process so called: (used ad-  
jectivally in extract).

The *Daguerreotype* process depends on the produc-  
tion of a very thin film of iodine and silver, on the  
surface of a carefully-prepared silver plate. This  
compound is chemically changed by the radiation  
proceeding from any external object illuminated by  
the sun. The image is developed by the action of  
mercurial vapour, and, lastly, rendered permanent,  
as well as the action of light is concerned, by dis-  
solving off the iodide of silver by hyposulphite of  
soda.—*Enc. Brit.* *Dictionary of Arts, Manufactures, and  
Mineral*. (Hunt's ed.)

**Dahlia**. *s.* [*Dahl*, a Swedish botanist.] Ex-  
otic plant so called, of the natural order  
*Compositae*.

stood in the balcony, which was fitted up with  
Gamboge's colours, and bore his name on the

In daily thanks, that give us such a prince.  
*Shakespeare, Henry VIII.* v. 2.

From daily trouble and continued grief. *Prior*.

**Daily**. *adv.* [This is a word which may  
serve as a text upon the use of the termi-  
nation *-ly* in adverbs; in which its use,  
though common, is by no means etymologi-  
cally evident. However much *-ly* may  
look like a derivational element, it is in  
reality a separate term; so that the words  
in which it appears are really modified  
compounds, or, at any rate, compounds in  
respect to their original elements. The *-y*  
represents a *-g* or *-ig*, which is itself de-  
duced from a *-k* (or *-c*) or an *-ik* (*-ic*);  
this being the older form of the adjective  
*like*.

The part of speech to which it naturally  
attaches itself is the substantive, which it  
converts into an adjective; as, *man*, *man-  
like*, *manly*, *manly*, *manly*—like a man.  
Out of this adjective the adverb arises; as,  
*tight*, *tightly*, *bright*, *brightly*. With the  
majority of adjectives no difficulty arises;  
none, at least, in respect to the form. But  
when, as in the word before us, the adject-

ive already ends in *-ly*, the apparent ne-  
cessity arises of either adding a second *-ly*  
(*dai-ly-ly*), or of leaving the two parts of  
speech identical in respect to their termi-  
nations. Against the first of these alterna-  
tives the practice of our language has  
decided, and that conveniently.

Yet it is doubtful whether the recognition  
of any second *-ly* (whether adopted or omit-  
ted) is necessary. In most, perhaps in all,  
languages where the adjectives have gen-  
ders, the neuter is used adverbially, just as it  
is also used substantively. Now in Anglo-  
Saxon this distinction of genders actually  
existed, and, along with it, the common  
practice of using the neuter as an adverb.  
From this point of view, then, the adverbial  
*daily* must be looked upon as what may be  
called a virtual neuter, a neuter which in  
an older stage of the language was a real  
one.] Every day; day by day.

Let that man with better sense advise,  
That of the world least part to us is road;

provision which he served in it, than for the massi-  
tude of the dish.—*Hakewell, Apology*.

**Dainty**. *adj.* [Welsh, *dantidd* = delicate.—  
On the strength of this word, several in-  
fluential authorities have looked upon  
*dainty* as a word of truly British origin;  
the more so as *dantedd*—tooth is a British  
word, and the word under notice is non-  
existent in the other languages of the Ger-  
man family. On the other hand, the  
evidence of *daenteth* being original Welsh  
is imperfect, being complicated by Latin  
*dens*, *dentis*, and the French *dent*.]

 More danger now from man alone we find,

*Waller.*

[Middle Latin *damnum* was used to signify a fine imposed by legal authority. The term was then elliptically applied to the limits over which the right of a lord to the fine for territorial offences extended, and then to the land and field of a proprietor. . . . 'Si quis caballum in *damnum* suum invenit' (Lexes Lauprand in Ducange). 'Excepit averia in alieno *damno* invenit' (Magnus Charta). . . . *Damnum* then acquired the sense of trespass, intrusion into the close of another, as in the legal phrase *damage feasant*, whence French *danger*, to distract or when cattle found in trespass. . . . From this verb was apparently formed the abstract *domigerium*, signifying the power of exacting a *damnum* or fine for trespass. 'Sub *domigrio* aliquis aut manu case' (Bracton). Then as *damnum* is written *damno* in the laws of W. the 1st conqueror, the foregoing *domigerium* and the corresponding French *danger* or *damager* would pass into *danger*, *danger*, the last of which is frequently found in the peculiar sense of *damnum* and *damnum* alone explained. 'En ladite terre et ou *danger* dudit sire trouva certains breves deus habitants. Leelles breves se baillent en un *danger*, ou *patrasage* defendu.' (Carp. A.D. 1373.)

'Narcissus was a lachloere  
 That Love had caught in his *danger*,  
 (had caught trespassing in his close).  
 And in his net he ran him so straine.' (R. E.)  
 The term *danger* was equally applied to the right of exacting a fine for breach of territorial rights, or to the fine or the rights themselves, and the officer whose duty it was to look after rights of such a nature was called *sergeant dangerous*. . . . To be *danger* of any one, *extra ra son danger*, came to signify to be subjected to anyone, to be in his power or liable to a penalty to be inflicted by him or at his suit, and hence the ordinary acceptance of the word at the present day. 'In *danger* of the judgment in *danger* of life-fine.' As this penalty might frequently be avoided by obtaining the licence of the person possessed of the right infringed, the word was applied to such licence, or to exactions made as the price of permission. . . . 'Judicium est quod Johannes de Nevilla miles non potest vendere boscum suum de Nevilla sine licentia et *dangerio* regis.' (Judgment A.D. 1230). . . . The word then passed on both in French and English to signify difficulties about giving permission or complying with a request, or to absolute refusal. 'Et leur commandement que si la roine feroit *danger* que ils la saclement (chassent) a force hors de l'epile.' 'Comme le tavernier faisoit *danger* ou difficulte de ce faire.' (Carpenter.)

With *danger* utter we all our chaffure,

 And to great clepe is holden at lital price;  
 This knoweth every woman that is wise.

dealing plainly with me in the matter of my own  
trials.—*Pope.*

Reflect on the merits of the cause, as well as of  
the men, who have been thus *dealt with* by their  
country. *Swift.*

Seamen who had just been paid off at Chatham  
were often compelled to deliver their purses on  
Gudshill, celebrated near a hundred years earlier by  
the greatest of poets as the scene of the depreda-  
tions of Paulet. The public authorities seem to  
have been often at a loss how to *deal with* the plun-  
derers.—*Macaulay, History of England, ch. iii.*

**Deal, v. a.** preterite and participle *dealt*.  
Distribute.

*Deal* thy bread to the hungry, and bring the poor  
that are cast out to thy house.—*Isaiah, viii. 7.*  
His lifted *deans* around his head he throws,  
And *deals* in whistling air his empty blows. *Dryden.*

*rors, vi. 10.*

**Dealer, s.** One who deals.

and learning, to give themselves a title from their

honest *dealer* is always undone, and the knave gets  
the advantage.—*Id., Gulliver's Travels.*

**Dealing, verbal abs.** Act of one who deals;  
practice; intercourse; traffic.

Concerning the *dealings* of men, who administer  
government, and unto whom the execution of that  
law belongeth, they have their judge, who sitteth in  
heaven.—*Hooker, Ecclesiastical Polity, ii.*

What these are!

Whose own hard *dealings* teach them to suspect  
The thoughts of others.

*Shakespeare, Merchant of Venice, i. 3.*

But this was neither one pope's fault, nor one  
prince's destiny: he must write a story of the  
empire, that must be full of all their *dealings* in  
this kind.—*Sir W. Raleigh, Essays.*

It were to be wished, that men would promote the  
happiness of one another, in all their private *deal-*  
*ings*, among those who lie within their influence.

The doctor must needs die rich; he had great  
*dealings* in his way for many years.—*Swift.*

While we have in this history been looking at the  
Romans from afar, and only seen their *dealings* with  
foreign kings, we have been able to note some of the  
changes in their manners as well as if we had stood  
in the Forum. *Sharpe, History of Egypt, ch. x.*

**Death, s.** Share dealt. *Obsolete.*

Then know Bellman, since thou aim'st at wealth,  
Where fortune hath bestowed her loved *death*.

lery, or covered place, for walking.

*bulatories* for the accompaniment of the citizens in  
all weather.—*T. Watson, History of English Poetry,*  
*ii. 93.*

**Dean, s.** [Fr. *doyen*, from Lat. *decanus*,  
from *decem* = ten.] See *eximect*.

As there are two foundations of cathedral churches  
in England, the old and the new, (the new are those  
which Henry VIII. upon suppression of abbies  
transformed from abbots or priors, and convent, to  
*dean* and chapter,) so there are two means of creating  
these *deans*; for those of the old foundation are  
brought to their dignity much like bishops, the king  
first sending out his conge d'elire to the chapter, the  
chapter then choosing and the bishop confirming  
them, and giving his mandate to install them. Those  
of the new foundation are, by a shorter course, in-  
stalled by virtue of the king's letters patent, without  
either election or confirmation. This word is also

applied to divers, that are chief of certain peculiar  
churches or chapels; as the *dean* of the king's  
chapel, the *dean* of the Archbishops, the *dean* of St.  
George's chapel at Windsor, and the *dean* of Beoking  
in Essex.—*Cooper.*

The *dean* and canons, or prebends, of cathedral  
churches, were of *dean* the church; they  
not only to be of *dean* with the bishop for his  
revenue, but chiefly for government in causes eccle-  
siastical. Use your best means to prefer such to  
those places who are fit for that purpose.—*Bacon,*  
*Advice to Villiers.*

There are four sorts of *deans* and *deaneries*, of  
which and of whom the law of this realm taketh  
knowledge. The first is a *dean* who hath a chapter,  
consisting of prebendaries or canons, subordinate to  
the bishop... the second is a *dean* who hath no  
chapter, and yet he is presentative, and hath cure of  
souls; he hath a peculiar and a court wherein  
he holdeth ecclesiastical jurisdiction;... the third  
is subject to the visitation of the bishop or ordinary;  
such is the *dean* of Hatfield in Essex... the fourth  
*dean* is ecclesiastical also, but *deanery* is not i-  
sentative, but donative, nor hath any cure of souls;  
and he hath also a court and a peculiar... such a  
*dean* is the *dean* of Arches, and the *dean* of Beoking  
in Essex... the fourth sort of *dean* is he who is  
usually called the rural *dean*; having no absolute  
judicial power in himself, but he is to order the ec-  
clesiastical affairs within his *deanery* and precinct  
by the direction of the bishop or archbishop, and  
is substitute for the bishop in many cases. *Burn*  
*(by Phillimore), Ecclesiastical Law, Deans.*

*of the Great Rebellion.*

Put both the *deans* into one, or, if that be too

Instead of the *deans* make the *deanery* double.

for the trumpeter's wife.—*Shaw, Tristram Shandy,*

A deathlike slumber, and a dread repose. — *Pope*.

**Deathman.** *s.* [In this combination the *s* is general, perhaps universal; forms like *deathman*, in which the *s* is omitted, being either rare or non-existent. In *Death's-head*, the awkwardness of such a sequence as *th + h* may be the reason for its generality; while, in *Death's-door*, it pre-

vents the contact of two dentals. Be this as it may, the form under notice is *not* that of an ordinary compound, but rather that of two words in an ordinary syntactic construction, i. e. a possessive case followed by a second substantive. As long as each word retains its accent, there is not even the appearance of a compound; and in *death's-head* the accent is *generally* double. But, followed by another word, so as to give a *decompound*, the accent of the second element is often lost, e. g. in *death's-head moth*: in which case we have a compound in *s*. No better instances of this compound can be given than in the names of the days of the week, i. e. in *Tue-s-day*, *Wedne-s-day*, and *Thur-s-day*, as contrasted with *Sun-day*, *Mon-day*, *Fri-day*, and *Satur-day*. Here we have, on the first view, a true syntactic concord between two words giving a compound according to the strictest application of the test of accent. But the origin of the *s* is equivocal. In most English words it is probably the sign of the possessive case, as the *s* in *father's*. But in the earlier stages of all the German languages a compound consisted not of two elements, but of *three*, viz. the two main words, and a connecting copula between them. In most cases this was a vowel, *o* or *i*; but in some it was the consonant *s*. That this was not the sign of the possessive case, but, though identical in sound, an independent form, is shown from several words in the allied languages where it follows substantives of which the possessive case ended *otherwise than in s*.

Over and above the theoretic views hereby suggested, there is the principle of a rule in spelling. With compounds of the kind under notice, except where the accent gives *two* words, the omission of the apostrophe in such words as *Tuesday*, *Wednesday*, and *Thursday* (rather than *Tue'sday*, *Wedne'sday*, and *Thur'sday*), is justifiable on the ground of etymology as well as convenience; and it is submitted that it is a rule which is advantageous to all words in which the accent gives a compound, the doctrine that the *-s* is the *-s* of the possessive case being by no means beyond doubt.] Executioner; hangman; headman.

He's dead; I'm only sorry  
He had no other deathman.

*Shakespeare, King Lear*, iv. 4.

**Debater**. *s.* One who debates. See next entry.

**Debating**. *verbal abn.* Act of a debater: (its commonest special application being to the debates in Parliament).

It must be admitted that, had he [Erskine] appeared in any other period than the age of the Foxes, the Pitts, and the Burkes, there is little chance that he would have been eclipsed even as a debater; and the singular eloquence and powerful effect of his famous speech against the Jesuits' Mark Bill, in the House of Lords, abundantly prove this position. He [Erskine] never appears to have given his whole mind to the practice of debating: he had a very scanty provision of political information; his time was always occupied with the laborious pursuits of his profession; he came into the House of Commons, where he stood among several equals, and behind some superiors, from a stage where he shone alone, and without a rival.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Erskine.

**Debauch**. *v. a.* [Fr. *débaucher*; Lat. *debauchari*.—see Debauchation.] Corrupt; vitiate.

It signifies decachord, or instrument of ten strings.—*Hammond, Annotation on Psalm xxxiii*.

In the following extract the fuller though more foreign form in *-on* is the title of a book, and, as such, a proper rather than a common name.

A Decagordon of ten quodlibetical questions concerning religion and state.—*Watson, Quodlibets of Religion and State*, 1603.

And so all the ancient interpreters uniformly

render it: the LXXII. *δεκαχίλιον δεκαχίλιον*, no a deca-chord melody.—*Ibid.*

**Decad.** *s.* [Gr. *deka*, *deka* = sum consisting of ten units: ten taken collectively; a ten, the ten, or that ten, as opposed to *ten* taken as so many individual numbers.] Sum of ten; its chief special application being.

**a.** To the collection of the units themselves.

The numerals are pronouns: being individual and variable. Locally, the originals are of earlier origin than the cardinals. The cardinals, however, seem to have been developed first. Their form is always simpler than that of the ordinals. Nevertheless they are abstract rather than concrete appellatives. The reasons for this lie in the connection between the names of the numbers and those of certain natural divisions, tribes, nations, &c. *decade*, &c. the threes being the chief.—*Dr. R. G. Latham, English Language, Preliminary Dissertation*, § 40.

**b.** To years: (as the ten decades into which a century (10×10) is divided).

Men were not only out in the number of some days, the latitude of a few years, but might be wide by whole olympiads, and *decades* of years.—*Sir T. Browne, Vulgar Errors*.

We make cycles and periods of years; as *decades*, centuries, and millennia, chiefly for the use of computations in history, chronology, and astronomy.—*Holzer, Discourse concerning Time*.

Butterwick places in this *decade* (between A. D. 1190 and A. D. 1200) the first specimens of the pastoral romance which the Castilian language affords.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. I. ch. iii. § 152.

The last ten years of the fifteenth century were considerably more productive than any which had gone before. In the present *decade* (from A. D. 1501 to 1510) a striking decline was visible.—*Ibid.* pt. I. ch. iv. § 1.

**c.** To the division of a book: (century being not unfrequently used in the same manner: the terms, however, may be used without the one implying the other).

Works are irretrievably lost as the second *decade* of Livy.—*Mansel, Miscellaneous Essays, Burke's History of the Popes*.

**d.** To the divisions of an army, or any body of men: (in which case it sometimes does and sometimes does not imply a century).

**Decadence.** *s.* [see next entry.] Decency.

All that is subject under Nature's reign In skies above, or on this lower round, When it is long and far sought and least found - Deth in *decadence* fall, and sleek remain.—*Drummond, Miscellaneous*, no. 11. (Ord MS.)

**Decadent.** *adj.* [Both this and the preceding are coined words, and both are exceptionable in their construction. Their elements are Latin, viz., the preposition *de* = from, and the verb (or one of its derivatives) *cadere* = fall; but, in Latin, when these two elements coalesce, the *a* in the second becomes *i*; so from *de + cadens*, and *de + cadentia*, the resulting compounds are *decadens* and *decadentia*.

Such being the case, the analogies of the compounds of *con-* and *co-* come under notice (see *Co-*, Contemporary). These suggest the doctrine that the terms, instead of being introduced from the Latin as whole ready-made words, were made in England out of English words of Latin origin, viz. *cadent* and *cadence*. Of these words, however, the former, though it cannot be called non-existent, is rare; while the latter, though comparatively common as applied to music, elocution, and prosody, is not a common word in the primary and physical sense of *fall*; neither is *dec-* by any means, so separable and Anglicized a particle as *co-* from *con-*. The likeliest origin is the word *decay*; this having suggested the *a*, while the *d* was taken from the Latin.] *Decaying*.

But of those *decadent* ages in which no ideal

either grows or blossoms? When belief and loyalty have passed away, and only the cant and false glory of their ruin; and all solemnity has become paganism; and the creed of persons in authority has become one of two things, an infidelity or a Machiavellism? Alas, of these ages World-History can take no notice.—*Carlyle, French Revolution*, pt. I. b. i. ch. ii.

**Décagon.** *s.* [Gr. *deka* = ten, and *γωνία* = corner, or angle.] Figure with ten angles. If all the sides and angles be equal, it is called a regular *decagon*, and may be inscribed in a circle. *Rees, Cyclopædia*, in voce.

The commands of God are clearly revealed both in the *Décalogue* and other parts of sacred writ.—*Hannond*.

**Décamp.** *v. n. c.* [Fr. *décamper*.] Shift, or change, camp or encampment; move or march off: (as, to decamp by night, or so as to escape the observation of an enemy, is a military stratagem, the word (with its derivatives), when applied generally, has often a disparaging import, suggesting secrecy or fraud; as in such expressions as *decamp with the money*).

Since it was determined not to fight, nothing was left but to take the step which Hume had recommended. There was a chance that, by *decamping* secretly, and hastening all night across heaths and moorlands, the earl might gain many miles on the enemy, and might reach Glasgow without further obstruction.—*Macleay, History of England*, ch. v.

**Décampment.** *s.* Act of changing camp or encampment; marching or moving off.

*Decampments* arising from emergency . . . are common & announced by beating to arms. . . . *Decamping* demands for secret purpose such as might affect upon the enemy . . . are usually made without loss of drum.—*Rees, Cyclopædia*, in voce.

This kind of arithmetic . . . may be considered as the common arithmetical computation . . . in which the places of the figures change their value in a ten-fold proportion, being ten times as much for every place more towards the left hand, and ten times less for every place more towards the right hand. — *Rees, Cyclopædia*, in voce.

**Decimation.** *s.* Taking of every tenth.

1. Applied to *Tithes*.

*Soliman, Emperor of the Turks*: 1638. (Nares by H. and W.)

And for a song I have  
A paper blarney, who, on all occasions,  
For all times and all seasons, hath such trinkets  
Ready in the deck. — *Mansinger, Guardian*, iii. 3. (Nares by H. and W.)

Besides grins, many other sorts of stomes are regularly figured; the amanthus, of parallel threads, as in the pile of velvet; and the scimitars, of parallel planes, as in a deck of cards. — *Grew*.

**Decking.** *verbal abs.* Ornament; ornamentation.

Such glorious *deckings* of the temple. — *Homilies*, b. ii. *Against Idolatry*.

What would she do then  
In woman's helps, in ornaments apt for her,  
And *deckings* to her delivery?  
*Beaumont and Fletcher, Love's Pilgrimage*.

**Declaim.** *v. n.* [Lat. *declamo*.] Make a set speech; harangue.

What are his mischiefs, consul? You *declaim*  
Against his manners and corrupt your own. — *B. Jonson*.

It is usual for masters to make their boys *declaim* on both sides of the argument. — *Swift*.

**Declaim.** *v. a.* Defend by declamation.

Whoever strives to bely or foment in his heart such [malignant] persuasions concerning God, makes himself the devil's orator, and *declaims* his cause. — *South, Sermons*, viii. 82.

**Declaimer.** *s.* One who declaims.

Tully [was] a good orator, yet no good poet; Falstaff a good historiographer, but no good *declaimer*. — *Sherry, Athenæum*, p. 192.

These flourishes of Russian liberality served the sophists and *declaimers* of Western Europe with material for new panegyrics on the magnanimity of the Empress Catherine. — *Sir E. E. Creasy, History of the Ottoman Turks*, vol. ii. ch. viii.

**Declaiming.** *verbal abs.* Uttering a declamatory speech.

Using not the sharp two-edged sword of God's word, but the blunt foils of human fallacies and *declaimings*. — *Jeremy Taylor, Artificial Happiness*, p. 145.

The splendid *declaimings* of novices and men of heart. — *South, Sermons*.

**Declamation.** *s.* Declamatory discourse.

The cause why *declamations* prevail so greatly, is for that men suffer themselves to be deluded. — *Hooker, Ecclesiastical Polity*.

**Declamator.** *s.* Declaimer. *Rare*.

They which only teach rhetoric ought to be named *declamators*, *declamators*, artificial speakers. — *Sir T. Elyot, The Governour*, fol. 41, b.

Was ever any *declamator's* case extravagantly put? — *Butler, Phalaris*, introd.

Who could, I say, hear this generous *declamator*, without being fired at his noble zeal? — *Tatler*, no. 65.

**Declamatory.** *adj.* Rhetorical.

This while suspended his interment, and became a *declamatory* theme amongst the religious men of that age. — *Sir H. Wallon*.

He has run himself into his own *declamatory* way, and almost forgotten that he is now setting-up for a moral poet. — *Dryden*.

Italy, as in Greece, may have its distinct epochs in different forms, but it rarely, if ever, renews its youth. Hardly more than half a century contains all that is of the highest order in Latin poetry. — *Lucretius, Catullus, Virgil, Horace*, the *Elogiacs*, *Ovid*. Even that noble *declamatory* verse, which in the best passages of Lucan, in Juvenal, and even in Claudian (this, with the philosophic and didactic poetry, Lucretius, Virgil, and the exquisite poetry of common sense and common life in Horace, the only indigenous poetry of Rome), dies freely out in the triumph of Christianity over Heathenism, as celebrated by Prudentius in his book against Symmachus. — *Milman, History of Latin Christianity*, b. xiv. ch. vi.

**Declarable.** *adj.* Capable of being declared.

This is *declarable* from the best writers. — *Sir T. Browne*.

**Declaration.** *s.* Act of declaring; thing declared.

1. Proclamation; publication.

His promises are nothing else but *declarations* what God will do for the good of man. — *Hooker, Ecclesiastical Polity*.

2. Exhibition.

Though wit and learning are certain and habitual perfections of the mind, yet the *declaration* of them, which alone brings the repute, is subject to a thousand hazards. — *South, Sermons*.

3. Promise.

There are nowhere so plain and full *declarations* of mercy and love to the sons of men as are made in the Gospel. — *Archbishop Tillotson*.

4. In *Law*. Statement on the plaintiff's part of his cause of action.

**Declarative.** *adj.* Declaratory.

To this we may add the vox populi *on declarations* on the same side. — *Swift*.

Andrew Alciatus, the civilian, and Franciscus de Corda, have both *declaratorily* confirmed the same. — *Sir T. Browne, Vulgar Errors*.

**Declaratory.** *adj.* Affirmative; expressive; explanatory of something (generally in the way of a law) previously existing, rather than decretory of something new.

These blessings are not only *declaratory* of the good pleasure and intention of God towards them, but likewise of the natural tendency of the thing.—*Archbishop Tillotson*.

Several acts were passed during the present session, but none so material as that for abolishing monopolies for the sale of merchandise, or for using any trade. This is of a *declaratory* nature, and recites that they are already contrary to the ancient and fundamental laws of the realm.—*Hallam, Constitutional History of England*, ch. vi.

**Declaro.** *v. a.* [Lat. *declaro*, from *clarus* = clear.]

1. Make clear; free from obscurity or doubt; explain. *Obsolete*; though the original meaning of the word.

To declare this a little, we must assume that the surfaces of such bodies are exactly smooth.—*Boyle*.

2. Make known; tell evidently and openly; publish; proclaim.

It hath been declared unto me of you, that there are contentions among you.—1 *Corinthians*, i. 11.

The sun by certain signs declares both when the south projects a stormy day, And when the clearing north will puff the clouds away.—*Dryden, Virgil's Georgics*.

With *self*. Make one's feelings, opinions, line of conduct, policy, or party known.

In Caesar's army somewhat the soldiers would have lain, yet they would not declare themselves in it, but only demanded a discharge.—*Racine*.

We are a considerable body, who, upon a proper occasion, would not fail to declare ourselves.—*Addison*.

**Declare.** *v. n.* Make a declaration; deliver a resolution or opinion for or against anything.

The internal faculties of will and understanding deceiving and declaring against them.—*Jeremy Taylor*.

God is said not to have left himself without witness in the world, there being something fixed in the nature of men, that will be sure to testify and declare for him.—*South, Sermons*.

It is by taking the sentence *exactly* as it stands that the verb is treated as neuter; by supplying *self*, *opinion*, or some similar word, the construction becomes that of the preceding entry. Such, too, is the case with the colloquial expression, 'I declare,' a word, perhaps a sentence, but always a term expressive of something declared, is understood. The same applies to Decline; refuse; as in 'He declined.' There is something declared or declined. If expressed, the construction is decidedly active; if understood, it is ambiguous. More on this point is said in the Preface.

**Declaredly.** *adv.* As that which is declared; avowedly.

Those who have yet, either undiscernibly as some, or suspectively as others, or declaredly as many, according to the general custom of countries, used such addressements to their faces as they thought most advanced the beauty or comeliness of their looks.—*Jeremy Taylor, Artificial Happiness*, p. 18.

**Declaration.** *s.* Declaration; exhibition. *Rare*.

**Declarer.** *s.* One who declares.

*a.* In the way of publishing or proclaiming.

For at once, as soon as Jesus had said: loke ye up, he had his sight; and of a hearse became a follower of Jesus train, and an open declarer of God's goodness.—*Eden, Luke*, ch. xviii.

But because it is of the essence of the law that he who is to be obliged, be assured of the authority of him that declareth it, which we cannot naturally take notice to be from God, how can a man without supernatural revelation be assured of the revelations received from the declarer? and how can he be bound to obey them?—*Hobbes, Of Commonwealth*, pt. ii. ch. xvi. (Rich.)

*b.* In the way of exposition or explanation.

The one must be helped by an infallible commentary, and the other supplied by an authentic declaration of tradition.—*Barton, On the Articles*, art. 30.

**Declaring.** *verbal abs.* Act of one who declares; declaration.

But let this be spoken now for a warning unto us; and now will we come to the declaring of the matter

in few words.—1 *Maccabees*, vi. 17. (Geneva Bible, 1601.)

**Declension.** *s.* [see Declination.]

1. Declination; decline; descent; falling off; falling away.

*a. Physical.*

We may reasonably allow as much for the declension of the land from that place to the sea, as for the immediate height of the mountain.—*T. Burnet, Theory of the Earth*.

*b. Figurative.* Deterioration.

Take the picture of a man in the greenness and vivacity of his youth, and in the latter date and declension of his drooping years, and you will scarce know it to belong to the same person.—*South, Sermons*.

But the fall, the rapid and total declension of Wilkes's fame, the utter oblivion into which his very name has passed for all purposes save the remembrance of his vices—the very signs of his reputation no longer existing in our political history—this affords also a salutary lesson to the followers of the multitude.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., L. M. P. A. A. A.*

2. In Grammar. Inflection of nouns.

Declension is only the variation or change of the termination of a noun, whilst it continues to signify the same thing.—*Clarke, Latin Grammar*.

The Peripateticks held it [the nominative] to be no case, and likened the noun in this its primary and original form to a perpendicular line A B.

The variations from the nominative they considered as if A B were to fall from its perpendicular, as, for example, in A C or A D. Hence, then, they only called these variations *casus*, cases, cases, or fallings. The Stoics, on the contrary, and the grammarians with them, made the nominative a case also. Words they considered (as it were) to fall from the mind or discursive faculty. Now when a noun fell thence in its primary form, they then called it *casus rectus*, casus rectus, an erect or upright case, or falling, such as A B, and by this name they distinguished the nominative. When it fell from the mind under any of its variations, as, for example, in the form of a genitive or dative, or the like, such cases they called *casus obliqui*, casus obliqui, oblique cases, or sideling fallings (such as A C or A D) in opposition to the other (that is A B), which was erect and perpendicular. Hence, too, grammarians called the method of enumerating the various cases of a noun *casus*, declension, or declension, it being a sort of progressive descent from the noun's upright form through its various declining forms.—*Burton, Hermes*, b. ii. ch. iv.

3. In Magnetism. See Dip.

The declension of the needle was discovered A.D. 1492, by Columbus in his first voyage to America; and would have been highly alarming to any one but of his undaunted and philosophical turn of mind.—*Grainger, The Sugar Cane*, b. i. note. (Rich.)

**Declinable.** *adj.* In Grammar. Capable of being declined: (as a noun).

Howe the other declinable parts from their plural A of singular. *Pulgrin, French Grammar*, b. iii. 1530.

The numbers, cases, modes, times, and other inflections of the declinable parts of speech are also marked.—*Trenchard, Essay on the Language and Verification of Chancery*.

**Declination.** *s.* [Lat. *declinatio*, -onis, from *declino* = decline, i.e. go, or pass, down a slope, or in a sloping manner. Declension is a further modification of the same word.]

1. Descent; change from a better to a worse state; diminution of vigour; deterioration.

Two general motions all animals have, that is, their beginning and increase; and two more, that is, their state and declination.—*Sir T. Browne, Vulgar Errors*.

Hope waits upon the flow'ry prime;

And summer, though it be less gay,

Yet it is not look'd on as a time

Of declination or decay. *Waller*.

2. Oblique variation from some definite direction; oblique motion; obliquity.

*a. Physical.*

Supposing there were a declination of atoms, yet will it not affect what they intend; for then they do all decline, and so there will be no more concurrence than if they did perpendicularly descend.—*Bay*.

*b. Moral.*

That a peccant creature should disapprove and repent of every declination and violation of the rules of just and honest, this right reason, discouraging upon the stock of its own principles, could not but inform.—*South, Sermons*.

3. In Astronomy. See extract.

Declination of a celestial object, in astronomy, is its angular or perpendicular distance from the equator, measured on a meridian, or great circle, passing

through the object and the poles of the heavens. A great circle, passing in this manner through the poles, (and therefore perpendicular to the equator) is called a circle of declination. Declination on the celestial globe corresponds with latitude on the terrestrial globe. And in the same manner as the geographical situation of a place is known when its longitude and latitude are given, so, in the heavens, the place of a star is determined when its right ascension and declination are known. To find, therefore, by observation the right ascension and declination of a heavenly body, is a problem of the first importance in astronomy.—*Rees, Cyclopædia*, in voce.

4. In Dialling. See extract.

Declination of a vertical plane, or wall, in dialling, is an arc of the horizon comprehended, either between the plane and the prime vertical circle, if you count it from east to west; or between the meridian and the plane, if you count it from north to south. There are many ways given by authors for finding the declination of planes; the most practicable way is by a declinator. *Rees, Cyclopædia*, in voce.

**Declinator, or Declinatory.** *s.*

1. In Dialling. Instrument by which the declination, reclinatio, and inclination of planes are determined.

Declinator, or declinatory, an instrument in dialling whereby the declination, inclination, and reclinatio of planes are determined. *Rees, Cyclopædia*, in voce. (See also last extract under preceding entry.)

2. One who declines to agree with another; dissentient. *Rare*.

The votes of the declinators could not be heard for the noise.—*Bishop Hacket, Life of Archbishop Williams*, pt. ii. p. 65.

**Declinature.** *s.* Act of one who declines in the sense of refusing.

The citizens of the United States will allow that such offers of a modification may be declined in any special case, and no disrespect be implied in the declinature.—*Daily News*, Jan. 11, 1855.

**Decline.** *v.*

1. Descend; fall off or away.

They'll be by th' fire, and presume to know What's done i' th' capital; who's like to rise, Who thrives, and who declines. *Shakspeare, Coriolanus*, i. 1.

The just man is he that walketh in his integrity, and whose path is to decline from evil.—*Bishop Hall, Solomon's Lick*, b. iii. § 1. (Ord MS.)

3. Refuse. See remarks under Declare, *v. n.*

**Decline.** *v. a.*

1. Bend downward; bring down.

And now fair Phœbus may decline in haste His weary wagon to the western vale. *Spenser*. And leaves the semblance of a lover, flat In melancholy deep, with head declin'd, And love-dejected eyes. *Thomson*.

2. Shun; avoid; refuse; be cautious of.

He had wisely declined that argument, though in their common serious they gave it.—*Lord Clarendon*.

Could Caroline have been captivated with the glories of this world, she had them all laid before her; but she generously declined them, because she saw the acceptance of them was inconsistent with religion. *Addison*.

As the squirrel said they could not decently decline his visit, he was shown up stairs, and paid his respects in the Scotch dialect, with much formality. *Burdett, Expedition of Humphrey Clinker*.

3. Modify a word by varying its terminations; inflect.

You decline Musa, and construe Latin, by the help of a tutor, or with some English translation. *Watts*.

**Decline.** *s.*

1. State of, or tendency to, the less or the worse; diminution; decay; contrary of increase; improvement, or elevation.

Thy rise of fortune did I only weep, From its decline determin'd to weep. *Prior*. Those fathers lived in the decline of literature.—*Swift*.

The fair we should be always fair; and no man Till thirty, should perceive there's a plain woman.

I know that some would fain postpone this era, Reluctant as all plebeians to resign Their post; but theirs is merely a chimera, For they have pass'd life's equinoctial line: But then they have their claret and Madeira To irrigate the dryness of decline; And courtly meetings, and the parliament, And dole, and what not, for their solace meat. *Byron, Don Juan*, xii. s. 5.

Now, it appears evident that, in this extraordinary

person [Burke], the usual progress of men's faculties in growth and decline was in some measure reversed; his fancy became more vivid,—it burnt, as it were, brighter before his extinction; while age, which had only increased that light, lessened the power of profiting from it, by weakening the judgment as the imagination gained luxuriance and strength.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Burke.*

2. In *Medicine*. See extract: (since the date of which the coincidence between Decline and Consumption has become less close; in the present Nosology, *atrophy* and *marasmus* being the nearest synonyms to Decline, *phthisis* to Consumption. In popular language the sense given in the extract still prevails).

*Decline*, in medicine, [is] a popular term applied to almost all chronic diseases in which the strength and plumpness of the body gradually decrease, until the patient dies. The term is synonymous with consumption, and is more particularly applied to consumption of the lungs and the mesentery.—*Rees, Cyclopaedia*, in voce.

- Declined, part. adj.** (a triyllable in the extract.) Fallen off.

O that the ocean did not bound our style  
Within these strict and narrow limits so;  
But that the melody of our sweet ides  
Might now be heard by Tyler, Arne, and Po:  
That they might know how far Thames doth outgoe  
The music of declined Italy.  
*Daniel, Dedication to the Tragedy of Cleopatra.*

- Decliner, s.** See extract.

*Decliners*, or declining dials, are those which cut either the plane of the prime vertical circle, or the plane of the horizon equally. If we conceive the plane of the prime vertical circle to revolve a little upon a right line drawn from zenith to nadir, the plane will become declining; nor will it be any longer cut at right angles by the meridian, but by some vertical circle passing through the intermediate points. After the like manner, a horizontal plane will be brought to decline, if, revolving on the meridian line, one part be raised a little towards the zenith, and the other depressed towards the nadir.—*Rees, Cyclopaedia*, in voce.

- Declining, part. adj.** Taking a downward direction; falling off; bringing decay: (one of its commonest conjunctions is with *years*, *age*, and the like, founded, as in 'the vale of life,' and similar expressions, on the notion of descent).

Thus then my low'd Euryalus appears;  
He looks the prop of my declining years! *Dryden*.  
And, in his wisdom, hath been pleas'd to lend our  
declining years with many sufferings, with diseases,  
and decays of nature.—*Swift*.

- Declining, verbal abs.** Act of one who declines.

1. Falling off; deviation.

Those who are shaken and scandalized at God's order, ev'n in this which is one of the most seeming *declinings* of his equity, at the best, incur Oza's tresspass of incredulity, when he saw the oxen stumble, and the ark lean towards a fall.—*Donatoppe, Devote Knave*, treat. iv. p. 11, s. 4. (Rich.)

2. In *Grammar*. Declension.

And a better and more example herein may be, our most noble queen, Elizabeth, who never took yet (Greek or Latin grammar in her hand, after the first *declining* of a noun and a verb.—*Acham, The School Master*. (Rich.)

- Declivity, s.** [Lat. *declivitas*, -*alis*; from *de* = from, down, *clivus* = slanting, sloping.] Inclination or obliquity reckoned downward; gradual, not precipitous or perpendicular, descent.

Rivers will not flow unless upon *declivity*, and their sources be raised above the earth's ordinary surface, so that they may run upon a descent.—*Wentland*.

I found myself within my depth; and the *declivity* was so small, that I walked near a mile before I got to the shore.—*Swift, Gulliver's Travels*.

- Decoet, v. a.** [Lat. *decoctus*, part. of *decoquo*.] Boil down; digest in water: (in the second extract applied to digestion in the stomach, for which Concoct is the commoner term).

The longer malt or herbs are decocted in liquor, the clearer it is.—*Bacon, Natural and Experimental History*.

There she decocts, and doth the food prepare:  
There she distributes it to every vein,  
There she expels what she may fitly spare.  
—*J. Dacier, On the Immortality of the Soul*.

## Decoction, s.

1. Act of boiling anything to extract its virtues.

In infusion, the liquor is, the greater is the part of the gross body that goeth into the liquor; but in *decoction*, though more worth forth, yet it either purgeth at the top, or setteth at the bottom.—*Bacon, Natural and Experimental History*.

2. Preparation made by boiling in water: (opposed, in *Pharmacy*, to Infusion, where there is merely steeping).

If the plant be boiled in water, the strained liquor is called the *decoction* of the plant.—*A. Routhnot, On the Nature and Chire of Aliments*.

- Decollate, v. a.** Take the head off anything by the neck; behead. *Rare*.

He brought forth a statue with three heads: two of them were quite beat off, and the third was much bruised, but not *decollated*.—*Hogwood, Hierarchy of Angels*, p. 474, 1685.

- Decollated, part. adj.** Taken off by the neck.

A fine piece of a *decollated* head of St. John the Baptist was shewn to a Turkish emperor; he prised many things; but he observed one defect: he observed that the skin did not shrink from the wounded part of the neck.—*Burke, Philosophical Enquiry into the Origin of our Ideas of the Sublime and Beautiful*, introil.

- Decollation, s.** [Lat. *decollatio*, -*onis*, from *collum* = neck.] Act of beheading; state of one beheaded: (used metaphorically in extract).

He, by a *decollation* of all hope, annihilated his mercy: this, by an immaturity thereof, destroyed his justice. *Sir T. Browne, Vulgar Errors*.

- Decolling, s.** Beheading. *Rare*.

By a speedy *decolling* and *decolling* of the king, and disinheriting his posterity, as the army remonstrants advise.—*Parliamentary History*, 21 Charles I. (Rich.)

- Decoloration, s.** Loss or abstraction of colour.

Paleness . . . is the proper colour and badge of love: but by the way it is to be noted that we must not understand by this word pale, a simple *decoloration* or whiteness of the skin.—*Ferrand, Loco Melancholy*, p. 121, 1640.

*Decoloration* [is] a term adopted from the French, signifying blanching or loss of the natural colour of any object.—*Houper, Medical Dictionary*.

- Decolour, v. a.** Deprive of colour. See Discolour.

- Decolouring, part. adj.** Having the power to deprive anything of colour.

The discovery of the antiputrescent and *decolouring* properties of charcoal in general is due to Loevy, of Petersburg; but their modifications have occupied the attention of chemists since his time. Krebs published in 1798 some essays on the *decolouring* of indigo, saffron, madder, gypum, &c., by means of charcoal. . . . This *decolouring* power does not belong alone to bone black.—*Cree, Dictionary of Arts, Manufactures, and Mines, Bone Black*.

- Decolouring, verbal abs.** Abstraction, deprivation, or loss of colour.

(For example see extract under preceding entry.)

- Decolourize, v. a.** Deprive of colour. See Discolour.

- Decolourizing, part. adj.** Decolouring.

The bleaching property of binacid of hydrogen . . . of which oxygen is certainly the *decolourizing* principle, leaves little doubt of the accuracy of the foregoing explanation.—*Turner, Elements of Chemistry*, p. 271.

(See, also, extract under Decolouring.)

- Decomposable, adj.** Capable of being, or liable to be, decomposed.

We cannot be sure that these unpoisonous bodies agree with the poisonous substances in every property, except the particular one, of entering into a difficultly *decomposable* compound with the animal tissues.—*J. S. Mill, System of Logic*, lib. ix. 1.

These two substances are so unstable as to decompose at quite moderate temperatures; as that to which the outside of a joint of roast meat is exposed. Possibly it will be objected that some inorganic compounds, as phosphuretted hydrogen and chloride of nitrogen, are more *decomposable* than most organic compounds.—*Herbert Spencer, Data of Biology*, § 111.

- Decompose, v. a.** Resolve a compound into its first principles; analyze.

The analytical legislators and constitution-venders are quite as busy in their trade of *decomposing* organization, in forming his grace's vessels into primary assemblies, national guards, &c.—*Burke, Letter to a Noble Lord*.

The chemical agency of the voltaic apparatus, to

which chemists are indebted for a most powerful instrument of analysis, was discovered by Carlisle and Nicholson soon after the invention was made known in this country. The substance first *decomposed* by it was water. . . . It was in pursuing these researches that Davy made his great discovery of the decomposition of the alkaline earths, which till then had been regarded as elementary.—*Turner, Elements of Chemistry*, pp. 110, 111.

- Decompose, v. n.** Become decomposed.

Nitric acid cannot exist if water be added to it; hypo-nitric acid is decomposed both by water and by contact with the various bases, and nitric acid . . . when anhydrous spontaneously *decomposes*. . . . The various sugars and kindred bodies *decompose* at no very high temperatures. . . . And the alcohols, with their allies, have no great power of resisting decomposition. . . . How rapidly albumenoid matters *decompose* under ordinary conditions, is daily seen: the difficulty of every house-wife being to prevent them from decomposing. . . . These nitrogenized compounds, like the rest of their family, are remarkable for the rapidity with which they *decompose*. . . . And the extensive changes produced by them in the accompanying oxy-hydro-carbons, are found to vary in their kinds according as the decompositions of the ferments vary in their stages. . . . Looking at the evidence thus brought together, do we not get an insight into the part played by nitrogenous matter in organic changes? We see that nitrogenous compounds in general, are extremely prone to *decompose*: their decomposition often involving a sudden and great evolution of force.—*Herbert Spencer, Data of Biology*, § 53-10.

- Decomposite, adj.** Compounded a second time; compounded with things already composite; triply, or more than triply, compounded; having a compound base or radical.

(For example see last extract under next entry.)

- Decomposite, s.** Anything decomposed. Common in *Chemistry*, and also applied in *Philology* to words.

*Decomposites* of three metals, or more, are too long to inquire of, except there be some compositions of them already observed.—*Bacon, Physiological and Medical Remarks*.

Compound radicals like midship [in mid-shipman] and gentleman [in gentle-man-like] are for the purposes of composition single words. Compounds wherein one element is compound are called *decomposites*. . . . The *decomposite* character of such words is often concealed or disguised.—*Dr. R. C. Latham, English Language*, § 423: 1500.

- Decomposition, s.**

1. Analysis; act or process by which a compound body or substance is resolved into its elementary parts.

Not only chemical composition, but chemical *decomposition*, is capable of being similarly propagated. The peroxide of hydrogen . . . is held together by a chemical attraction of so weak a nature, that the slightest circumstance is sufficient to decompose it; and it even, though very slowly, gives off oxygen and is reduced to water spontaneously (being, I presume, decomposed by the tendency of its oxygen to absorb heat and assume the gaseous state). Now it has been observed, that if this *decomposition* of the peroxide of hydrogen takes place in contact with some metallic oxide, as those of silver, and the peroxide of lead and manganese, it superinduces a corresponding chemical action upon those substances. . . . Now no other explanation [Lavoisier] observes, of these phenomena can be given, than that a body in the act of combination or *decomposition* enables another body, with which it is in contact, to enter into the same state.—*J. S. Mill, System of Logic*, lib. xiii. 1.

Speculation aside, however, that which it concerns us to notice, is the broad fact that light is an all-important agent of molecular changes in organic substances. It is not here necessary for us to ascertain how light produces these compositions and *decompositions*: it is necessary only for us to observe that it does produce them.—*Herbert Spencer, Data of Biology*, § 13.

2. Act of compounding things already compounded.

We consider what happens in the compositions and *decompositions* of saline particles.—*Boyle*.

The English, as Sir P. Sidney observed, hath an elegant way of expressing them [epithets] much beyond the Latin, in a dextrous *decomposition* of two or three words together, as *tauto-plensing* fruits, high-cruel thoughts.—*Instructious concerning Oratory*, p. 62: Oxford, 1682.

- Decomposed, v. a.** Compose of things already compounded; compound a second time; form by a second composition.

Nature herself cloth in the bowels of the earth make *decomposed* bodies, as we see in vitriol, cinabar, and even in sulphur itself.—*Boyle, Skeptical Chymist*.

When a word stands for a very complex idea, that

is compounded and decomposed, it is not easy for men to form and retain that idea exactly. — *Locke*.  
If the violet, blue, and green be interrupted, the remaining yellow, orange, and red will compound upon the paper an orange; and then, if the interrupted colours be let pass, they will fall upon this compounded orange, and, together with it, decompose a white. — *Sir I. Newton, Opticks*.

**Decomposed.** *adj.* Decomposed.

The pretended salts and sulphur are so far from being elementary parts extracted out of the body of mercury, that they are rather to borrow a term of the grammarians, decomposed bodies, made up of the whole metal, and the menstruum, or other additions employed to disperse it. — *Boyle*.

**Decomposed.** *s.* Decomposite.

Had Marlborough been of a proud and vindictive nature, he might have been provoked into raising another quarrel in the royal family, and into forming new cabals in the army. But all his passions, except ambition and avarice, were under strict regulation. . . . He perfectly understood his own interest: he had perfect command of his temper: he endured *decorously* the harshness of his present situation, and contented himself by looking forward to a reversion which would amply repay him for a few years of patience. — *Macaulay, History of England*, ch. xxi.

**Decoy.** *s.* (used also adjectivally, or as the first element in a compound.) [Dutch, *hoge* = cage.]

1. Place for catching ducks.

A *decoy* is generally made where there is a large pond surrounded with wood, and beyond that a marshy and uncultivated country. . . . As soon as the evening sets in, the *decoy* rises (as they term it) and the wild fowl feed during the night. . . . The *decoy* ducks are fed with hempseed, which is flung over the screens in small quantities to bring them forwards into the pipes, and to allure the wild fowl to follow, as this seed is light enough to float. There are pipes (as they are called) which lead up narrow ditches, that close at last with a funnel net. Over these pipes (which grow narrower from the first entrance) is a continued arch of netting, suspended on hoops. It is necessary to have a pipe or ditch for almost every wind that can blow, as upon this circumstance it depends which pipe the wild fowl will take to, and the *decoy* man always keeps on the leeward side of the ducks. Along each pipe are placed, at certain intervals, screens made of reeds, which are so situated that it is impossible the wild fowl should see the *decoy* man before they have passed to the end of the pipe where the parnet is. . . . The *decoy* ducks . . . lead the way. It often happens, however, that the wild fowl are in such a state of sleepiness and drowsiness that they will not follow the *decoy* ducks. Use is then generally made of a dog. — *Pennant, British Zoology*, vol. ii. pp. 239-241.

Rocks, mountains, and the other elevations of the earth, suffer a continual *decrement*, and grow lower and lower.—*Woodward*.

But is [the theory of integrant molecules] still answered the purpose . . . of an instrument for calculating the geometrical relations of the parts of crystals to each other; for the integrant molecules were supposed to be placed layer above layer, each layer, as we ascend, decreasing by a certain number of molecules and rows of molecules; and the calculation of these laws of *decrement* was, in fact, the best mode then known of determining the positions of the faces. The theory of *decrements* served to express and to determine, in a great number of the most obvious cases, the laws of phenomena in crystalline forms, though the theory of integrant molecules could not be maintained as a just view of the structure of crystals.—*Wheatley, History of Scientific Ideas*, ii. 83.

The similarity in sound of the last two syllables to the *-trepid* in *intrepid* has probably favoured the eutachrestic pronunciation under notice.

(Ord MS.)

(See also under next entry.)

**Decretal. s.** (*decretal* in extract from Spenser.) Book of decrees or edicts; body of laws; more especially, the collection of the pope's decrees.

Treason and *decretals* were made of equal force,

and as authentic as the sacred charter itself.—*Hoswell, Fossil History*.

The general supremacy effected by the Roman Church over mankind in the twelfth and thirteenth centuries derived material support from the promulgation of the canon law. The foundation of this jurisprudence is laid in the decrees of councils, and in the *decretals* or epistles of popes to questions propounded upon eminent doubts relative to matters of discipline and ecclesiastical economy. . . . After several minor compilations had appeared, Gratian, an Italian monk, published about the year 1140 his *Decretum* or general collection of papal epistles and sentences of fathers, arranged and directed into titles and chapters in imitation of the *Pandects*. . . . This work of Gratian . . . has been censured for notorious inaccuracies as well as inconsistency, and especially for the authority given to the false *decretals* of Isidore, and consequently to the papal supremacy. It fell, however, short of what was required in the progress of that usurpation. Gregory IX. caused the five books of *Decretals* to be published by Raymond de Bascfort in 1234. . . . These consist almost entirely of the *decretals* issued by the later Popes, Alexander III., Innocent III., Honorius III., and Gregory himself. They form the most essential part of the canon law, the *Decretum* of Gratian being comparatively obsolete. . . . The study of this code became of course obligatory upon ecclesiastical judges. It produced a new class of legal practitioners or canonists; of whom a great number added, like their brethren the civilians, their illustrations and commentaries, for which the obscurity and discordance of many passages, especially in the *Decretum*, gave ample scope. . . . The canon law was almost entirely founded upon the legislative authority of the pope; the *decretals* are, in fact, but a new arrangement of the bold epistles of the most usurping pontiffs, and especially of Innocent III., with titles or rubrics comprehending the substance of each in the compiler's language. *Italian, View of the State of Europe during the middle Ages*, ch. vii. p. 2.

*dens* = tooth.] Loss or shedding of the teeth. *Rare*.

Solon divided life into ten septenaries, because in every one thereof a man received some sensible mutilation: in the first in *dentition*, or falling of teeth.—*Sir T. Browne, Vulgar Errors*.

**Dédicate.** *v. a.* [Lat. *dedicatus*, pass. part. of *dedico*.]

1. Devote to some divine power; consecrate and set apart to sacred uses.

A pleasant grove  
Was shot up high, full of the stately tree  
That *dedicated* is to Olympick Jove,  
And to his son Alcides.

*Spenser.*

**Dédicate.** *adj.* Dedicated.

This tenth part, or title, being thus assigned unto him, leaveth now to be of the nature of the other nine parts, which are given us for our worldly necessities, and becometh as a thing *dedicated* and appropriate unto God.—*Spelman*.

**Dédicatoire.** *s.* One to whom anything is dedicated: (correlative to *Dedicator*).

Though the *dedication* be the shortest part of a book, and held by all readers to be the vilest and most contemptible; yet the writer and his patron, the *dedicator* and the *dedicataire*, have a different way of thinking.—*Brouke, Poet of Quality*, vol. i. introd. iv.: 1767.

**Dedication.** *verbal abs.* Dedication.

They shall offer their offering, each prince on his day, for the *dedication* of the altar.—*Numbers*, vii. 11.

**Dedication.** *s.*

1. Act of dedicating to any being or purpose; consecration; solemn appropriation.

It cannot be laid to many men's charge, that they have been so curious as to trouble bishops with placing the first stone in the churches; or so scrupulous as, after the erection of them, to make any great ado for their *dedication*.—*Hooker, Ecclesiastical Polity*.

The princes offered for *dedication* of the altar, in the day that it was anointed.—*Numbers*, vii. 10.

2. Address to a patron.

Proud as Apollo on his forked hill,  
Sat full-blown Bufo, puff'd by every quill;  
Fed by soft *dedication* all day long,  
Hornee and he went hand in hand in song.

*Pope.*

**Dedicator.** *s.* (accented *dédicatór* when opposed to *dedicataire*: see *Mortgagee*.) One who dedicates; more especially one who makes a trade of doing so.

Leave dangerous truths to unsuccessful satyrs,  
And flattery to subsome *dedicators*.

*Pope, Essay on Criticism*.

Certain impostors had mixed themselves among the learned. There was a kind of parasites, who, like their ancestor in Terence, were for retelling upon their profession, and from Nature's designation of simple innocents had improved themselves into *dedicators*. Yet this condition was not thought altogether monstrous; the parasite having as noble an origin, and suffering as little a degeneracy, as the *dedicator*. For the parasite, as the *dedicator*, was at first a name of honour.—*Bishop Warburton, Enquiry into the Causes of Prodiges and Miracles*, dedication.

**Dedicator.** *adj.* Composing or constituting a dedication; complimentary; adulatory: (often *postpositive*).

He made it his work to see what books were in the press, and to look over epistles *dedicator*, and prefaces to the reader, to see what faults might be found.—*State Trials, Case of Archbishop Abbot*. (Rich.)

Thus I should begin my epistle, if it were a *dedicator* one; but it is a friendly letter.—*Pope*.

**Dedicator.** *s.* Dedication: (the commoner term).

I conceive, readers, much may be guessed at the man and his book, what depth there is, by the framing of his title, which being in this remonstrant so much and unvaried as ye see, I conceiv'd him to be near akin to him who set forth a passion sermon with a formal *dedicator* in great letters to our Raviour.—*Milton, Apology for Smeagmamus*.

**Deditions.** *s.* [Lat. *deditio*, -*onis* = giving up.] Act of yielding up anything; surrender.

*Rare*.  
It was not a complete conquest, but rather a *dedi-*

tion upon terms and capitulations agreed between the conqueror and the conquered.—*Sir M. Hale, History of the Common Law of England*.

**Dédolent.** *adj.* [Lat. *de-dolens*, -*entis*, pres. part. of *dedoleo* = cease to grieve.] Insensible to pain; apathetic. *Rare*.

When once the criterion or perceptive faculty has lost its tenderness and sensibility, and the mind becomes reprobate, then darkness and light, good and evil, bitter and sweet are all one. Then . . . men are *de-dolent* and past feeling; and having no other law but that of the corporeal life, become insatiable in luxury and work wickedness with greediness.—*Baldwell, Sailing of Souls*, p. 114: 1877.

**Deduce.** *v. a.* [Lat. *deduco* = lead from, lead down; pass. part. *deductus*, whence *deduction* and others.]

1. Draw in a regular connected series, from one time or one event to another. *Rhetorical; Latinism*.

O goddess, may, shall I deduce my rhimes  
From the dire nation in its early times!

*Pope.*

2. In *Logic*. Infer by Deduction.

Reason is nothing but the faculty of *deducing* unknown truths from principles already known.—*Locke*.

3. Lead forth: (as a colony). *Latinism*.

It is justified by express assertion of an old oracle to Archias, a Corinthian, advising him he should hither *deduce* a colony.—*Felden, Illustrations of Drayton*, song 17. (Rich.)

**Deduction.** *s.* Thing deduced. *Rare*.

Praise and prayer are his due worship, and the rest of those *deductions*, which I am confident are the remote effects of revelation.—*Dryden, Religio Laici*, preface.

**Deducible.** *adj.* Capable of being deduced; more especially of being inferred by Deduction.

The condition, although *deducible* from many grounds, yet shall we evidence it but from few.—*Sir T. Browne, Vulgar Errors*, l.

All properties of a triangle depend on, and are *deducible* from, the complex idea of three lines, including a space. *Locke*.

**Dédut.** *v. a.* [see *Deduce*.]

1. Subtract; take away; cut off.

We *deduct* from the computation of our years, that part of our time which is spent in incogitancy of infancy.—*Norris*.

2. Deduce, in its application to a colony. *Rare*.

The Philippians are in the first part of Macedonia, as it is declared in the sixteenth of the Acts, a people *deducted* out of the title of Philippi, so called of Philip the buyer of it.—*Udall, Preface to the Philippians*. (Rich.)

**Deduction.** *s.*

1. Subtraction; withdrawal; abatement.

Even with this *deduction* a candid consideration of Mr. Nodder's and Mr. Woodwood's labours can hardly fail to convince [anyone] that the objection as to the paucity of actual onomatopœias is one which is wholly without weight.—*Perrar, Chapters on Language*, ch. xiii.

2. In *Logic*. In its strictest sense this word means inference of some particular or individual instance, as the conclusion of a syllogism, from premises of greater generality, in which it translates the Greek *ἀναγωγή*, and stands in contrast to Induction or *ἐκγωγή*, where the inference is from the particular or individual to the general or universal; i.e. from the less to the more general.

All A's are B.

This C is A.

Therefore this C is B.

This is a typical formula; inasmuch as the first proposition, or major premiss, is as general as possible (i.e. universal), and the last as particular as possible (i.e. individual). Then, as effects are, for the most part, less general than their causes, deductive reasoning largely coincides with reasoning from cause to effect, which again is reasoning *a priori*. Reasoning from some general principle is of the same kind. Hence, as Discourse and Ratiocination are common synonyms for syllogistic

reasoning, they are also synonyms for Deduction.

Necessary truths are proved, like arithmetical sums, by adding together the portions of which they consist. An inductive truth is proved, like the guess which answers a riddle, by its agreeing with the facts described. Demonstration is irresistible in its effect on the belief. . . . Inductive inference is not demonstrative, but it is often more striking than demonstrative reasoning. . . . *Deductive* truths are the results of relations among our own thoughts. Inductive truths are relations which we discern among existing things; and thus, this opposition of *deduction* and *induction* is again an aspect of the fundamental antithesis already spoken of. — *Whewell, History of Scientific Ideas*, pt. i. b. 1. ch. i. § 2.

Social science . . . is a *deductive* science; not, indeed, after the method of geometry, but after that of the more complex physical sciences. It infers the law of each effect from the laws of causation on which that effect depends. . . . by considering all the causes which conjointly influence the effect, and compounding their laws with one another. Its method, in short, is the concrete *deductive* method: that of which astronomy furnishes the most perfect, natural philosophy a somewhat less perfect example. . . . Without disembodying the necessary imperfections of the *a priori* method when applied to such a subject, neither ought we, on the other hand, to exaggerate them. The same objections, which apply to the method of *deduction* in this its most difficult employment, apply to it, as we formerly showed, in its easiest; and would even there have been insuperable, if there had not existed, as was then fully explained, an appropriate remedy. This remedy consists in the process which, under the name of verification, we have characterized as the third essential constituent part of the *deductive* method: that of collating the conclusions of the ratiocination either with the concrete phenomena themselves, or, when such are obtainable, with their empirical laws. The ground of confidence in any concrete *deductive* science is not the *a priori* reasoning itself, but the accordance between its results and those of observation & posteriors. . . . M. Comte . . . looks upon the social science as essentially consisting of generalizations from history, verified, not originally suggested, by *deduction* from the laws of human nature. . . . I cannot but think that this truth is enunciated in too unqualified a manner, and that there is considerable scope in sociological inquiry for the direct, as well as for the inverse, *deductive* method. It will, in fact, be shown . . . that there is a kind of sociological inquiries to which, from their prodigious complication, the method of direct *deduction* is altogether inapplicable, while by a happy compensation it is precisely in those cases that we are able to obtain the best empirical laws. We shall begin, then, by looking at the social science as a science of *deduction*, and considering what can be accomplished in it, and under what limitations, by that mode of investigation. — *J. S. Mill, System of Logic*, b. vi. ch. ix. § 1.

The discoveries which change the method of a science from experimental to *deductive*, mostly consist in establishing, either by *deduction* or by direct experiment, that the varieties of a particular phenomenon uniformly accompany the varieties of some other phenomenon better known. Thus the science of sound, which previously stood in the lowest rank of merely experimental science, became *deductive* when it was proved by experiment that every variety of sound was consequent on, and therefore a mark of, a distinct and definable variety of oscillatory motion among the particles of the transmitting medium. . . . But the grand agent for transforming experimental into *deductive* science, is the science of number. . . . The science of quantity being (as far as any science can be) altogether *deductive*, the theory of that particular kind of quantities becomes, to this extent, *deductive* likewise. The most striking instance in point which history affords (though not an example of an experimental science rendered *deductive*, but of an unparalleled extension given to the *deductive* process in a science which was *deductive* already,) is the revolution in geometry which originated with Descartes, and was completed by Clairaut. — *Ibid.*

**Deductive. adj.** Consisting in, or relating to, (logical) deduction.

The intellect of Black belonged to a class, which, in the eighteenth century, was almost universal in Scotland, but was hardly to be found in England, and which, for want of a better word, we are compelled to call *deductive*, though fully admitting that even the most *deductive* minds have in them a large amount of induction, since, indeed, without induction, the common business of life could not be carried on. But for the purposes of scientific classification, we may say, that a man or an age is *deductive*, when the favourite process is reasoning from principles instead of reasoning to them, and when there is a tendency to overrate the value of specific experience. — *Huckle, History of Civilization in England*, vol. ii. ch. vi.

(See also under *proceeding* and following entries.)  
**Deductively. adv.** In a deductive manner; consequentially; by regular deduction; by a regular train of ratiocination.

There is scarce a popular error rampant in our days, which is not either directly expressed, or *deductively* contained in this work. — *Sir T. Browne, Vulgar Errors*, i. 8.

It is evident, that their process is essentially inductive; it is a procedure from the observation of complex phenomena, up to the elements to which those phenomena are owing; it is, in other words, a study of natural effects, in order to learn the operation of natural causes. Very different was the process in Germany and Scotland. . . . The geological theory which [Werner] propounded, depended entirely on a chain of argument from cause to effect. He assumed, that all the great changes through which the earth had passed, were due to the action of water. Taking this for granted, he reasoned *deductively* from premises with which his knowledge of water supplied him. . . . The method adopted by Werner was evidently *deductive*, since he argued from a supposed cause, and reasoned from it to the effects. In that cause he found his major premise, and thence he worked downwards to his conclusion, until he reached the world of sense and of reality. . . . Kinetly the same process, on the same subject, and at the same time, was going on in Scotland. Hutton, who was the founder of Scotch geology, and who, in 1784, published his 'Theory of the Earth', conducted the inquiry just as Werner did; though, when he began his speculations, he had no knowledge of what Werner was doing. The only difference between them was, that while Werner reasoned from the agency of water, Hutton reasoned from the agency of fire. . . . In obedience to the general mental habits of his country, he adopted the *deductive* method. — *Huckle, History of Civilization in England*, vol. ii. ch. vi.

*Defalcation* [is] a word at present of very slovenly and inaccurate use. We read in the newspapers of a *defalcation* of the revenue, not meaning thereby an actual topping off (defalcation) of certain taxes, with their proceeds, which would be the only correct use, but a passive filling short in its return from what they previously were. Can it be that some confusion of *defalcation* with 'default,' or at least a string of 'fault' and not 'fix' in its second syllable . . . has led to this?—*French, Select Glossary of English Words and formerly in some different from their present.*

Those who are curious in what are called psychological monstrosities will waste through, and perhaps remember, the tedious history of this person's *defalcations*, the biography and bookishness of his partners, in what may be regarded as a lay form of slimony, and above all the amazing view of a government office which his career illustrates. . . . Figures are either single or mixed: the simple be either circular; and of circular, either complete, as circles, or deficient, as ovals.—*Sir H. Wotton, Elements of Architecture.*

**Defect.** *s.* [Lat. *third person singular of deficio* = fail, full short = it falls short.] Balance on the wrong side of an account.

The misery is, such a time cannot last! Squandering, and payment by loan, is no way to choke a deficit. Neither is all the substance for quenching conflagrations. . . . To the Nonpareil himself . . . it is clear . . . that changes inevitable lie at no great distance. Apart from financial deficit, the world is wholly in such a new-fangled humour.—*Carlyle, French Revolution, pt. i. b. li. ch. li.*

When a country is overwhelmed with debt, with an enormous deficit in its budget, without power of retrenchment, and with its resources exhausted, then, indeed, the statesman and financier, however great their ability and credit, may well despair of being able to retrieve the public credit.—*Barry, Resources of Turkey, ch. iii.*

During the week which followed there was some anxiety as to the result of the subscription for the stock of the General Society. If that subscription failed, there would be a deficit: public credit would be shaken; and Montague would be regarded as a pretender who had owed his reputation to a mere run of good luck, and who had tempted chance once too often.—*Mansel, History of England, ch. xliii.*

**Defier.** *s.* Challenger; contemner; one who dares and defies.

He was ever A loose and strong defier of all order.

*Browning and Fletcher, Wild-Goose Chase.*

Is it not then high time that the laws should provide, by the most prudent and effectual means, to curb those bold and insolent defiers of heaven.—*Archbishop Tillotson, Sermons, iii.*

God may, some time or other, think fit the concern of his justice, and providence too, to revenge the affronts put upon them by such impudent defiers of both, as neither believe a God, nor ought to be believed by man.—*South, Sermons.*

1. Make foul or impure; make nasty or filthy; dirty.

There is a thing, Harry, known to many . . . our land by the name of pitch: this pitch, as ancient writers do report, doth *defile*.—*Shakespeare, Henry IV. Part I. li. 4.*

He is justly reckoned among the greatest printers of this age, however his character may be *defiled* by man and dirty hands.—*Swift, Letter on the Sacramental Test.*

**Defiliation.** *s.* [Lat. *filius* = son.] Rendering childless; abstraction of a child from its parents: (as the italics in the extract are the author's, he probably coined the word). See Deoculate.

The premature apprenticeships of these tender victims [chimney-sweepers' apprentices] give but too much encouragement, I fear, to clandestine and almost infantile abductions; the seeds of civility and true courtesy, so often discernible in these young grafts (not otherwise to be accounted for) plainly hint at some forced adoption; many noble Racheis mourning for their children, even in our days, countenance the fact; the tales of fairy-spiritings may shadow a lamentable verity, and the recovery of the young Montague be but a solitary instance of good fortune out of many irreparable and hopeless *defiliations*.—*Lamb, Essays of Elia, On Chimney-sweepers.*

**Defiling.** *verbal abs.* Pollution; corruption; taint.

Forgetfulness of good turns, *defiling* of souls, adultery and shameless uncleanness.—*Windsor, xiv. 20.*

**Define.** *v. a.* [Lat. *definio*; Fr. *definir*.] Give the definition; explain a thing by its qualities and circumstances; circumscribe.

That do'st so well their miseries *define*?

*Sir P. Sidney.*

succeeds in the place of accusation, some certain and definite time.—*Aglietti, Parergon Juris Canonici.*

**Définite.** *s.* Thing explained or defined.

If these things are well considered, special baseness is nothing else but the definition of the general; and the general, again, is nothing else but a *definite* of the special.—*Aglietti, Parergon Juris Canonici.*

**Définately.** *adv.* In a definite manner; with precision.

Whether the earliest origin of a word can be *definitely* proved or not, let it be considered that the choice rests in every case between an ultimate imitation or interjection and nothing. . . . Let us look at the history of one or two imitative roots; and I think that we shall *definitely* prove how little they deserve the charge of sterility.—*Burrar, Chapters on Language, ch. xiv.*

**Définiteness.** *s.* Attribute suggested by Definite; certainty; limitedness.

The Romans . . . in the development of their empire, gave it all the solidity and *definiteness* which political and legal institutions acquired in their hands.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion, ch. vii.*

Once more looking for a characteristic common to these two kinds of vital action, we perceive that the combinations of heterogeneous changes which constitute them, differ from the few combinations which they otherwise resemble, in respect of *definiteness*. The associated changes going on in a glacier, admit of indefinite variation. Under a conceivable alteration of climate, its thawing and its progression may be stopped for myriads of years. . . . By a geological convulsion, its motion may be arrested without an arrest of its thawing. . . . Here, then, the combination has none of that *definiteness* which, in a plant, marks the mutual dependence of assimilation, respiration, and circulation.—*Herbert Spencer, Data of Biology.*

**Definition.** *s.* [Lat. *definitio*, -onis; from *de* and *finis* = end, from *finis* = end, boundary, limit.] Difference, in the Logical sense.

1. That part of a complex term which limits the other part, the whole being used to convey in a fuller form the import of a simpler equivalent, is its *defining* part or *definition*. It is submitted that this, though somewhat different from the ordinary sense of the term, is not incompatible with it; and also that, whether it be so or not, it is the original and *etymological* meaning; i.e. the one, and the only one, with which is properly connected the notion of *limit*, or *limitation*, conveyed by *finis*. This word, in a dictionary, is in a different category from words in general, inasmuch as it is one of the technical terms of lexicography. Hence, though more than usual will be said about it in the present notice, more still will appear in the Preface. Illustrations, also, are to be found under Connnotation and Connote; Denotation and Denote; Description; Real and Nominal; and, more especially, Difference; with which last term the present view makes the word Definition nearly synonymous. If so, a definition is a part (the differentiating part) of a term, the term being the Predicate. But this limitation of import is so far from being adhered to in practice, that the word often means not only the whole term, but the whole proposition to which it belongs.

It is to be observed that the word *Definition* is sometimes used to denote the *whole sentence*, in which the term defined is conjoined with the explanation given of it; as when we say, 'a triangle is a three-sided figure'; sometimes it is used to signify merely that *which gives* the explanation; as when we say 'three-sided figure' is the *definition* of 'triangle'.—*Whately, Elements of Logic, supplement to ch. i.*

The present view, which is purely etymological, limits the *defining* part of the term to 'three-sided'; at any rate, in the Genus (as will be seen in the next section) the notion conveyed is that of extension rather than limitation.

2. In practice, however, the part gives its name to the whole, and the definition

consists of the Difference with the addition of the Genus, and, so doing, constitutes an entire Proposition. The italics in the following extracts are those of the original.

The 'logical-definition' consists of the 'Genus' and 'Difference'; which are called by some writers the 'metaphysical' [ideal] parts; as being not two real parts into which an individual-object can (as in the former case) be actually divided, but only different views taken [notions formed] of a class of objects, by one mind. *A. p. A Proposition* would then be defined, logically, as a sentence affirming-or-denying: 'A Magnet' 'an Iron-ore having attraction for iron'; 'a Square,' a 'Rectangle' [right-angled parallelogram] having equal sides.—*Whately, Elements of Logic*, supplement to ch. i.

Most persons look for nothing more, in a definition, than a guide to the correct use of the term—a protection against applying it in a manner inconsistent with custom and convention. Anything, therefore, is to them a sufficient definition of a term, which will serve as a correct index to what the term denotes; although not embracing the whole, and sometimes, perhaps, not even any part of what it connotes. This gives rise to two sorts of imperfect, or unscientific definition; namely, Essential but incomplete Definitions, and Accidental Definitions, or Descriptions. In the former, a connotative name is defined by a part only of its connotation; in the latter, by something which forms no part of the connotation at all. An example of the first kind of imperfect definitions is the following:—'Man is a rational animal.' It is impossible to consider this as a complete definition of the word Man, since (as before remarked) if we reflected that it was should be obliged to call the Houghulus men; but as then happen to be no Houghulus, this imperfect definition is sufficient to mark out and distinguish from all other things, the objects at present denoted by 'man'; all the beings actually known to exist, of whom the name is predicable. . . . Definitions of this kind are what logicians have had in view, when they laid down the rule, that the definition of a species should be *per genus et differentiam*. Differentia being seldom taken to mean the whole of the peculiarities constitutive of the species, but some one of those peculiarities only, a complete definition would be *per genus et differentiam*, rather than *differentiam*. It would include, with the name of the superior genus, not merely some attribute which distinguishes the species intended to be defined from all other species of the same genus, but all the attributes implied in the name of the species, which the name of the superior genus has not already implied. —*J. S. Mill, System of Logic*, i. viii. 3.

This notion would account for the rule that all definition must necessarily be *per genus et differentiam*, and would also explain why any one *differentia* was deemed sufficient. But to expound, or express in words, a distinction of kind, has already been shown to be an impossibility: the very meaning of a kind is, that the properties which distinguish it do not grow out of one another, and cannot therefore be set forth in words, even by implication, otherwise than by enumerating them all; and all are not known, nor ever will be so. It is idle, therefore, to look to this as one of the purposes of a definition; while, if it is only required that the definition of a kind should indicate what kinds include it or are included by it, any definition which expounds the connotation of the names will do this; for the name of each class must necessarily connote enough of its properties to fix the boundaries of the class. If the definition, therefore, be a full statement of the connotation, it is all that a definition can be required to be. *Ibid.*, i. viii. 3.

The following, I believe, is a complete definition of an elephant: An animal which naturally drinks by drawing the water into its nose, and then springing it into its mouth.—*De Morgan, Formal Logic*, p. 36.

Thus far the Definition is truly *definitive or limiting*; denoting (rather than connoting) the object to which it refers; and that by placing it in a class and subjoining some single distinctive, differentiating, or limiting character, by which the particular division of that class is indicated.

3. But more properties than are necessary for the mere differentiation may be enumerated: in which case the latitude in the use of the term increases, and Definitions become either actual or approximate Descriptions.

Any Definition which goes beyond a 'nominal-definition,' i.e. which explains anything more of the nature of the thing than is implied in the name, may be regarded, strictly speaking, as, so far, a

'real-definition.' The very word 'Definition' however is not usually employed in this sense; but rather, 'Description.' —*Whately, Logic*, sup. to ch. i.

In the fuller discussion which Archbishop Whately has given to this subject in his later editions, he almost ceases to regard the definitions of names and those of things as, in any important sense, distinct. He seems . . . to limit the notion of a Real Definition to one which 'explains anything more of the nature of the thing than is implied in the name' (including under the word 'implied,' not only what the name connotes, but everything which can be deduced by reasoning from the attributes connoted). Even this, as he adds, is usually called, not a Definition, but a Description; and (as it seems to me) rightly so called. A Description, I conceive, can only be ranked among Definitions when taken (as in the case of the theological definitions of man) to fulfil the true office of a Definition, by declaring the connotation given to a word in some special use, as a term of science or art, which special connotation of course would not be expressed by the proper definition of the word in its ordinary employment. —*J. S. Mill, System of Logic*, i. viii. 3, note.

**Definitive. adj.** Determinate; positive; express.

Other authors write often dubiously, even in matters wherein is expected strict and definitive truth. —*Sir T. Browne, Vulgar Errors*.

I make haste to the casting and comparing of the whole work, being indeed the very definitive sum of this art, to distribute usefully and gracefully a well-chosen plot. —*Sir H. Wotton*.

**Definitive. s.** That which defines.

As to words which are only significant as accessories, they acquire a signification either from being associated with one word or else to many. The true reason why paper is not burned by the flame that plays about it, seems to be, that the aqueous part of the spirit of wine, being imbibed by the paper, keeps it so moist, that the flame of the sulphurous parts of the same spirit cannot fasten on it; and therefore, when the deflagration is over, you shall always find the paper moist. —*Boyle*.

Because it was evident to them that there was no other way to solve the eternity or antiquity of the world, than by supposing innumerable deluges and deflagrations. —*Bishop Pearson, Exposition of the Creed*, art. i.

Which pierced a pip precisely in the ear,  
And pass'd unto the other side quite thorough;  
So that the bear, defunct, my tripp'd up near. *Byron, Translation of Morgante Maggiore, 63.*

With the accent on the first syllable.  
Here entity and quiddity,  
The souls of defunct bodies fly. *Butler, Hudibras.*

**Defunct. s.** One deceased; dead man or woman.

Nature doth abhor to make his couch  
With the defunct, or sleep upon the dead. *Shakespeare, Cymbeline, iv. 2.*

In many of these cases the searchers are able to report the opinion of the physician who was with the patient, as they receive the same from the friends of the defunct.—*Grant, Observations on the Bills of Mortality.*

**Defunction. s.** Death. *Rare.*

Nor did the French possess the Malique land,  
Till four hundred one and twenty years  
After defunction of king Pharaonid. *Shakespeare, Henry V. i. 2.*

**Defy. v. a.** [N.Fr. *défier*; from Lat. *fidēs* = faith; witness, not only to fall off from allegiance, but to challenge, and the like.]

1. Call to combat; challenge.

I once again  
Defy thee to the trial of mortal fight. *Milton, Samson Agonistes, 1174.*  
Where seek retreat, now innocence is fled?  
Safe in that guard, I durst even hold defy;  
Without it, trouble now, when heav'n is nigh. *Dryden.*

2. Treat with contempt; slight.

I do know  
As many fools that stand in better place,

Garnish'd like him, that for a tricky word

Defy the matter. *Shakespeare, Merchant of Venice, iii. 3.*

**Defy. s.** Challenge; invitation to fight. *Rare.*

At this the challenger, with serge defy,  
His trumpet sounds. *Dryden.*

**Defyer. s.** See Defier.

**Degender. v. n.** Degenerate. *Obsolete.*

So that next offspring of the Maker's love,  
Next to himself in glorious degree,  
Degendering to hate, fell from above  
Through pride. *Spenser, Hymns of Heavenly Love.*

**Degender. v. a.** Make degenerate. *Obsolete.*

And if than thou may any worse be read,  
They into that ere long will be degendered. *Spenser, Faerie Queen, v. 2, introduction.*

**Degeneracy. s.** Falling off from the qualities proper to things of the same race or kind; meanness.

"In true, we have contracted a great deal of weakness and impotency by our wifal degeneracy from goodness; but that grace, which the gospel offers to us for our assistance, is sufficient for us.—*Archbishop Tillotson, Sermons, vi.*

The ruin of a state is generally preceded by an universal degeneracy of manners, and contempt of religion, which is entirely our case at present.—*Swift.*

There is a kind of sluggish resignation, as well as jealousy and degeneracy of spirit, in a state of slavery.—*Adams.*

**Degenerate. v. n.** [Lat. *degeneratus*, pass. part. of *degenero*; from *genus* = race, kind, breed, kin.] Fall off in the way of Degeneracy: (for its special import in *Physiology*, see Degeneration.)

Most of those fruits that used to be grafted, if they be set of kernels or stones, degenerate.—*Bacon, Natural and Experimental History.*

When wit transgresseth decency, it degenerates into insolence and impiety. *Archbishop Tillotson, Sermons.*

The state of atrophy is in all respects the very opposite of hypertrophy; consisting in such a reduction in the rate of formative activity, as compared with that of their 'waste,' that their nutrition is no longer maintained at its previous standard; so that they are gradually reduced in bulk, or degenerate into some inferior histological type, or (which is the more common occurrence) undergo both diminution and deterioration at the same time. *Dr. Carpenter, Principles of human Physiology, § 548.*

**Degenerate. adj.**

1. Unlike one's ancestors; fallen from the virtue and merit of one's ancestors.

But wherefore do I tell these news to thee? . . .  
Then that art like enough, through vessel fair, . . .  
To fight against me under Percy's pay;  
To dog his heels, and court'ry at his heels, . . .  
To show how much thou art degenerate! *Shakespeare, Henry IV. Part I, iii. 2.*

Yet thou hast greater cause to be  
Asham'd of them, than they of thee;  
Degenerate from their ancient blood,  
Since first the court allow'd them food. *Swift.*

2. Unworthy; base.

So all shall turn degenerate, all deprav'd;  
Justice and temperance, truth, and faith forgot!  
One man except. *Milton, Paradise Lost, xi. 506.*  
When a man so far becomes degenerate as to quit the principles of human nature, and to be a noxious creature, there is commonly an injury done some person or other.—*Locke.*

**Degenerately. adv.** In a degenerate, or disparaging, manner; as one who has degenerated; unworthily.

That blindness worse than this,  
That saw not how degenerately I loved. *Milton, Samson Agonistes, 118.*

**Degeneration. s.** Act or process by which anything degenerates; condition or state of that which has degenerated: (one of its chief special applications is in *Physiology*, where it means the condition of a tissue of which the vitality has become diminished, impaired, or perverted.)

In plants, wherein there is no distinction of sexes, these transplantations are yet more obvious than they; as that of barley into oats, of wheat into darnel; and those grains which generally arise among corn, as cockle, arseus, awigins, and other degenerations.—*Sir T. Browne, Vulgar Errors, li. 17.*

There is one remarkable form of degeneration, however, which is common to nearly all the tissues, and which seems to occur as a normal alteration in many of them at an advanced period of life; this consists in the conversion of their albuminous or gelatinous materials into fat, thus constituting what is

known as *Fatty Degeneration*. That this change is not due to the removal of the normal components of the tissues, and the substitution of newly-deposited fatty matter in their place, but is (in most cases at least) the result of a real conversion of the one class of substances into the other, has been already pointed out. And there are certain facts which indicate that this kind of *degeneration* is a part of the regular series of processes by which tissues that have served their purpose in the economy are prepared for being removed by absorption. — *Dr. Carpenter, Principles of human Physiology*, § 363.

**Degenerate. adj.** Degenerate. *Rare*.  
Shame, instead of piety, restrains them from many base and degenerate practices. — *South, Sermons*.  
*Degenerate passion*, and for man too base,  
It seeds its empire in the female race;  
There rages, and, to make his blow secure,  
Puts half'ry on. — *Dryden, Juvenal's Satires*.

**Degenerately. adv.** In a degenerate manner; basely; meanly. *Rare*.  
How wounding a spectacle is to see our greatest heroes, like Hercules at the distaff, thus degenerately employed! — *Dr. H. More, Decay of Christian Piety*.

**Deglutition. s.** [Lat. *deglutitio*, -*onis* = swallowing down; from *deglutio* = swallow.]  
Act or power of swallowing.

When the *deglutition* is totally abolished, the patient may be nourished by clysters. — *Arbuthnot, On the Nature and Choice of Aliments*.

When the reduction of the food in the mouth has been sufficiently accomplished, it is carried into the pharynx, and thence propelled down the oesophagus into the stomach by a set of associated movements; which, taken together, constitute the act of *deglutition*. . . . The first stage in the process is the carrying back of the food until it has passed the anterior palatine arch; this, which is effected by the approximation of the tongue and the palate, is a purely voluntary movement. In the second stage the tongue is carried still further backwards, and the larynx is drawn forwards under its roots, so that the epiglottis is pressed down over the rim of glottis. . . . The third stage of the process, the propulsion of the food down the oesophagus, then commences. . . . is completely involuntary. . . . The purely automatic nature of the act of *deglutition* is shown by the fact that no attempts on our own part will succeed in performing it really voluntarily. In order to excite it, we must supply some stimulus to the fauces. A very small particle of solid matter, or a little fluid (saliva, for instance), or the contact of the back of the tongue itself, will be sufficient; but without either of these, we cannot swallow at all. Nor can we restrain the tendency when it is thus excited by a stimulus; every one knows how irresistible it is, when the fauces are touched in any unusual manner; and it is equally beyond the direct control of the will in the ordinary process of eating, voluntary as we commonly regard this. — *Dr. Carpenter, Principles of human Physiology*, §§ 425, 426.

**Degradation. s.**  
1. Deprivation of an office or dignity; loss or diminution of rank; humiliation.

The word *degradation* is commonly used to denote a deprivation and removing of a man from his degree. — *Aspliff, Parergon Juris Civili*.

The literary men of Western Europe, and the Ulemas of Turkey, alike regarded the treaty of Kainardji as consummating the glory of Russia, and the degradation of the house of Osman. — *Sir E. S. Creasy, History of the Ottoman Turks*, ii. vii.

2. Degeneracy; baseness.

So deplorable is the *degradation* of our nature, that whereas before we bore the image of God, we now retain only the image of men. — *South, Sermons*.  
What all men of sound minds regarded as a state of great improvement, blessing the country with much happiness, freeing it from many abuses, and giving it precious hopes of liberty, he would have pronounced the height of misery and degradation. — *Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Burke.

**Degrade. v. a.** [Lat. *gradus* = step, degree.]

1. Put one down his degree; deprive one of office, dignity, or title.

He should  
Be quite degraded, like a hedge-born swain,  
That doth presume to boast of gentle blood. — *Shakespeare, Henry VI. Part I.* iv. 1.

2. Lessen; diminish the value of.

Shalt thou, by descending to transmute  
Man's nature, lessen or degrade thine own? — *Milton, Paradise Lost*, iii. 303.  
All higher knowledge in her presence falls  
Degraded. — *Ibid.* viii. 581.

**Degrade. v. n.** In a *University*. Put oneself in the condition, for some particular purpose, of the possessor of a degree below the real one; descend from a higher to a lower degree.

**Degraded. part. adj.** Lowered in rank, dignity, or intellect.

In a handful of rude and bizarre traditions, in a few skulls of the very meanest and most degraded type, in hero and there a gnawed f. . . . of human bones, in a few coarse and pitiable implements of bone and flint, what traces have we of that radiant and ideal protoplast whom men have delighted to invest with purely imaginary attributes, and to contemplate as the common ancestor of their race? — *Farrar, Chapters on Language*, ch. iv.

**Degrade. s.** Degradation. *Rare*.  
So the words of Ridley at his degradation, and his letter to Hooper, capably shew. — *Milton, Of Reformation in England*.

**Degrading. part. adj.** Causing, or consisting in, degradation; lowering.

The recognition of the long and feeble periods of animalism and ignorance is no more *degrading* to humanity than the remembrance of the time when he was rocked and swaddled and dandled in a nurse's arms is a degradation to any individual man. — *Farrar, Chapters on Language*, ch. iv.

**Degradingly. adv.** In a degrading manner; disparagingly.

This is what Bishop Taylor *degradingly* calls virtue and precise duty. — *Coccey, Philomom* conv. 1.

**Degré. s.** [Fr. *degré*; Lat. *gradus*.]

1. Rank.

Surely men of low *degré* are vanity, and men of high *degré* are a lie: to be laid in the balance, they are altogether lighter than vanity. — *Paulus*, lxi. 2.

I embrace willingly the ancient received course and convenience of that discipline, which teacheth inferior *degré*s and orders in the church of God. — *Hooker, Ecclesiastical Polity*, dedication.

In an *academic* sense.

Let the study of logic, if it was useful, be made optional to those who are merely candidates for a *degré*, but indispensable to the attainment of academic honours. . . . To this it was replied, that it was most desirable that no one should be allowed to obtain the *degré* of B. A. without a knowledge of logic. — *Whately, Elements of Logic*, preface.

2. Measure of an attribute, quality, or relationship.

If all the parts are equally heard as loud as one another, they will stay you to that *degré*, that you will fancy your ears were torn in pieces. — *Dryden*.

The second, third, and fourth *degré*s of heat are more easily introduced than the first: every one is both a preperative and a step to the next. — *South*.

Marriages were forbidden not merely within those limits which nature, or those inveterate associations which we call nature, have rendered sacred, but as far as the seventh *degré* of collateral consanguinity computed from a common ancestor. . . . In the eleventh century an opinion began to gain ground in Italy, that third cousins might marry, being in the seventh *degré* according to the civil law. Peter Damian, a passionate abettor of child-bride and his maxims, treats this with horror, and calls it heinous. Gregory I. pronounced matrimony to be unlawful as far as the seventh *degré*, and even, if I understand him right, as long as any relationship could be traced. The fourth Lateran Council in 1215 removed a great part of the restraint, by permitting marriages beyond the fourth *degré*, or what we call third cousins, and dispensations have been made more easy when it was discovered that they might be converted into a source of profit. — *Hallam, View of the State of Europe during the middle Ages*, ch. vii. pt. 2.

Opposed to Kind.

Passing over . . . the arduous assumption which runs through such vast portions of logic, that everything pertaining to men must differ in kind no less than in *degré* from its analogues among brutes, we may observe that the naturalness of interjections . . . is in fact one of the chief glories. — *Farrar, Chapters on Language*.

3. In *Geometry*. Three hundred and sixtieth part of the circumference of a circle: (the space of one *degré* in the heavens is accounted to answer to sixty miles on earth).

In minds and manners, twins opposed we see;  
In the same sign, almost the same *degré*. — *Dryden*.  
To you who live in chill *degré*,  
As map informs, of fifty-three. — *Ibid.*

4. In *Astronomy*. See *Graduated*.

**By degress.** Gradually; by little and little.  
Their bodies are exercised in all abilities both of doing and suffering, and their minds acquainted by *degress* with danger. — *Sir P. Sidney*.

**Degradingly. adv.** According to its *degré*. *Rare*.

It is for God, and for Omnipotence, to do mighty things in a moment, but *degradingly* to grow to greatness, in the course that he hath left for man. — *Fellham, Revelations*. (Ord MS.)

The least neglect does steel us into unproficiency and offence, which *degradingly* will weigh us down to extremity. — *Ibid.* (Ord MS.)

The excellent and wise pains he took in this particular, no man can *dehonestate* or reproach. — *Jeremy Taylor, Sermons*, iii. 224. (Ord MS.)

**Dehonestation. s.** [Lat. *dehonestatio*, -*onis*, from *de* and *honestus* = honourable, honest.] Dishonour. *Rare*.

Who can expiate the infinite shame, *dehonestation*, and infamy which they bring? — *Bishop Gauden, Hierapatria*, p. 482: 1653.

Sacrilege . . . is the unjust violation, alienation, or *dehonestation* of things truly sacred, &c. — *Id., Anti-Bulwer*, p. 404.

**Dehort. v. a.** [Lat. *dehortor*.] Dissuade; advise to the contrary. *Rare*.

One severely *dehorted* all his followers from prostituting mathematical principles into common apprehension or practice. — *Bishop Wilkins*.

The apostle vehemently *dehort* us from unbelief. — *Bishop Ward, On Infidelity*.

**Dehortation. s.** Dissuasion; counseling to the contrary; advice against something.

The author of this epistle, and the rest of the apostles, do everywhere vehemently and earnestly *dehort* from unbelief; did they never read these *dehortations*? — *Bishop Ward, On Infidelity*.

**Dehortatory. adj.** Dissuading; dissuasive.

The text you see is a *dehortatory* charge to avoid the offence of God. — *Bishop Hall, Remains*, p. 168.

**Déicide. s.** [Lat. *Deus* = God, and *cædo* = kill, slay; the second element in such compounds as *homicida* = murderer, &c.] Killing, or killer, of God.

Explaining how Perfection suffer'd pain,  
Almighty languish'd, and Eternal died;

And earth profan'd, yet bless'd, with *Déicide*. — *Prior*

**Déictic. adj.** [Gr. *δεικτικός* = showing.] In *Logic*. See *Elenctic*.

**Déical. adj.** Godmaking. *Rare*.

**Déification. s.** Making of God; apotheosis; excessive praise.

There is a little mollification used to reduce the foregoing apotheosis and *déification* within the compass of sense. — *Fidherby, Athanasius*, p. 200.

[He] ran into *déifications* of my person, pure flames, constant love, eternal raptures, and a thousand other phrases drawn from the images we have of heaven, which all men use for the service of hell, when run over with uncommon violence. — *Zeller*, no. 31.

Buddhism being in fact a *déification* of human intellect, the philanthropy of the system extends its participation and advantage to the whole family of mankind. — *Sir J. E. Tennant, Ceylon*, pt. iv. ch. xi.

**Déified. part. adj.** Raised to the rank of a deity.

Some, such as Kattregam and Pattine, are borrowed from the mythology of the Brahmins; some are the result of fire and other elements of the universe, and others are *déified* heroes. — *Sir J. E. Tennant, Ceylon*, pt. iv. ch. xi.

**Déifier. s.** One who, or that which, deifies; one who treats that which is not God as God; idolater.

One would have hoped that the memory of so signal an interposition of Heaven (the Flood) against the first *déifiers* of men, should have given an effectual check to the practice for some considerable time to the succeeding world. — *Coccey, Philomom*, conv. 3.

**Déiform. adj.**

1. Having the form of God.

But if the final consummation of all things under the creature *déiform*. As Plato's school used phrase it, there is none that think need fear to come to any harm. — *Dr. H. More, Song of the Soul*, iv. 23.

2. Conformable to the divine will.

He [Whitehead] studied to raise those who converted with him to a nobler set of thoughts, and to consider religion as a seed of a *deiform* nature; to use one of his own phrases.—*Bishop Burnet, History of his own Time.*

When our minds shall perceive what a pure imitation of God its life is, and how exactly *deiform* all its actions and motions, with what ravishing pleasure will they even review their own motions, which, being immediately copied from the nature of God, will be such as severest reason will be always forced to command.—*Scott, Christian Life*, i. 3.

**Deiformity. s.**

1. Quality of possessing, or exhibiting, the form of a deity.

Thus the soul's numerous plurality  
I've proved, and shewed she is not very God;  
But yet a decent *deiformity*  
Have given her.

*Dr. H. More, Song of the Soul*, iv. 27.

2. Conformity to the divine will.

The short and secure ways to union and *deiformity* being faithfully performed, discreetly practised, and carefully accompanied with profound humility.—*Spiritual Conquest*, pt. iv. p. 35: 1051.

**Deify. v. a.** [Fr. *deifier*; Lat. *Deus* = God, and *eo* = become, which here, as in so many other words, has an active sense, meaning *make*.]

1. Make a god of; adore as a god; transfer into the number of the divinities.

The seals of Julius Cæsar, which we know to be antique, have the seal of Venus upon them, though they were all *deified* after his death, as *æiota* that he was *deified*.—*Dryden*.

Persuade the covetous man not to *deify* his money, and the proud man not to adore himself.—*South*.

2. Extol as a god; praise excessively.

He did again so extol and *deify* the pope, as made all that he had said in praise of his master and mistress seem temperate and plausible.—*Bacon*.

**Deign. v. a.** [Fr. *deigner*; Lat. *dignor* = make one's self worthy; think worthy; from *dignus* = worthy.] Vouchsafe; think worthy. *Deign* to descend now lower, and relate What may no less perhaps avail us known.

Neither glut thyself with present delicacies, nor long after *deistrelles* hard to be come by.—*Translation of Luther's Sermons*, p. 248.

**Deism. s.** System of deistical doctrines.

*Deism*, or the principles of natural worship, are only the faint remnants or dying flames of revealed religion in the posterity of Noah.—*Dryden*.

In the works of Plinius we have the philosophy of the Greeks, freed from their mythology, taking up the form of a philosophical religion, a *deism* accompanied with a pure and high-toned morality, but clouded in all the darkness of metaphysics.—*Sharpe, History of Egypt*.

**Deist. s.** One who acknowledges the existence of God, but denies a revelation: (as such opposed to a *Christian*). As opposed to the denier of a God, whether *Atheist* or *Pantheist*, a *Deist* is generally denominated *Theist*, the two terms, in Latin and Greek, translating one another.)

In the second epistle of St. Peter, certain *deists*, as they seem to have been, lashed at the prophecy of the day of judgement.—*Bishop Burnet*.

The word *deist* or *theist*, in its original signification, implies merely the belief of a God, being opposed to *atheist*, and so there may be *deists* of various kinds, according to their respective religions which they receive over and above that prime article. There may be *Pagan deists*, and *Jewish deists*, and *Mohometan deists*, and *Christian deists*; meaning such persons as respectively embrace those several

religions, above the belief of a God. But those who reject all traditional religious, and yet profess to believe in God, are merely *deists*, or emphatically such without any additional epithet to distinguish them; or, if an epithet must be added, they should be called *Epicurean deists*, or *Infidel deists*, or something of the kind. To call them *Christian deists* is a great abuse of language; unless Christians were to be distributed into two sorts, Christians and Non-Christians, or Christians and Anti-Christians.—*Waterland, Christ vindicated against Infidelity*, p. 63.

**Deistical. adj.** Belonging to, savouring of, or consisting in, the doctrine of the deists.

Weakness does not fall only to the share of Christian writers, but to wags who have taken the pen in hand to support the *deistical* or antichristian schemes of our days.—*Watts*.

**Deitate. adj.** Made God: (used to express the Godhead of Christ, in contradistinction to *incarnate*) *Christ*.

**Deity. s.**

1. Divinity; nature and essence of God.

Some things he doth as God, because his *deity* alone is the spring from which they flow; some things as man, because they issue from his mere human nature; some things jointly as both God and man, because both natures concur as principles therunto.—*Hooker, Ecclesiastical Polity*.

2. Godhood.

They declared with emphasis the perfect *deity* and the perfect manhood of Christ.—*Milman, History of Latin Christianity*, b. ii. ch. iv.

They on their former journey forward pass,  
With pains far passing that long wandering Greek,  
That for his love refused *deity*.—*Spenser*.

Humbly complaining to her *deity*.  
Got my lord chamberlain his liberty.

*Shakespeare, Richard III.*, i. 1.

For what reason could the same *deity* be denied unto Laurontia and Flora which was given to Venus?—*Sir W. Raleigh*.

Even Buddha himself is not worshipped as a *deity* or as a still existent agent of benevolence and power. He is merely revered as a glorified remembrance, the effulgence of whose purity serves as a guide and incentive to the future struggles and aspirations of mankind.—*Sir J. E. Tennent, Ceylon*, pt. iv. ch. xi.

**Deject. v. a.** [Lat. *dejectus*, pass. part. of *dejecio* = cast down.] Cast down; afflict; grieve; depress; sink; discourage; crush.

One having climbed the roof, the concourse to descend,  
From thence upon the earth *dejects* his humble eye.  
*Dryden, Polyolion*, xii.

Sometimes she *dejects* her eyes in a seeming civility; and many mistake in her a genuine for a modest look.—*Fowler, Profane State*, ch. i.

**Dejectedness. s.** Attribute suggested by Dejected; lowness of spirits; mental or moral approximate prostration.

Are you a gentleman?—  
Not here; for I am all *dejectedness*.

To turn the cause of Joy into sorrow argues extreme *dejection* and a distemper of judgment no less than desperate.—*Bishop Hall, Conversions*, b. i.

The text gives it to the publican's *dejection*, rather than to the Pharisee's boasting.—*Felltham, Resolves*, ii. 2.

**Dejection. s.**

1. Lowness of spirits; melancholy; depression of mind.

What besides  
Of sorrow, and *dejection*, and despair,  
Our frailty can sustain, my tides bring.

Deserited and astonished, he sinks into utter *dejection*; and even hope itself is swallowed up in despair.—*Rogers*.

2. Weakness; inability.

3. In Medicine. Discharge of fecal matter; *plur.* matter so discharged.

The liver should continually separate the choler from the blood, and empty it into the intestines; where there is good use for it, not only to provoke *dejection*, but also to attenuate the chyle. *Ray, Wisdom of God manifested in the Works of the Creation*.

**Dejectory. adj.** Having a tendency, of the power, to effect dejection (by stool); evacuant.

*Crashaw.*  
With these must be reckoned some sudden intermissions of the light of the sun, occasioned, not by the veil of an eclipse cast before it, but some unaccountable passion of the luminous body itself. Such a *deliquium* was read of immediately subsequent to the death of Caesar.—*J. Spencer, Discourse concerning Prophecies*, p. 234.

Earth's shadow then  
Was feebly pictured, and the point exact  
By computation noted, where the orb

**Delirium. s.** pl. *deliria* (of which an example is given in the second extract; the word, however, being chiefly used in *Medicine* as the name of a state or condition, is not often required in the plural). [Lat.] Excitement and aberration of the mind. See extract.

a. In *General Medicine*.

*Delirium* has been defined: disorder of the intellectual powers, with or without derangement of the moral sentiments. But this . . . embraces the whole circle of mental diseases. J. Frank and some others have restricted it by adding: this disorder assuming a chronic form. Several writers retaining the preceding extended definition, have divided *delirium* into the acute and the chronic. Chronic *delirium*, therefore, comprises all those states of disordered mental manifestation treated in the article Insanity. Acute . . . *delirium* refers to those morbid affections of mind supervening in the course of febrile, inflammatory, and some chronic diseases. *Copland, Dictionary of Practical Medicine*.

b. As a specific form of insanity.

Persons after a delirium of liquor, or under the influence of terror, or in the *deliria* of a fever, or in a fit of lunacy, or even walking in their sleep, have had their brain so deeply impressed with chimerical representations, as they could possibly have been had these representations struck their senses.—*Shadwell, Essay on Glue*. (Ord MS.)

*Delirium*, or ideosynchysis (from *idea*, idea, and *synchysis*, confusion) which it states to be reaction and aberration of the ideas, wandering of the intellects, illusions, hallucinations. form, as a capital, being Δ; i. e. either an  
equilateral or an isosceles triangle. Its  
chief special application is in Physical Geo-  
graphy and Geology, which it has tak'n  
from the shape of the block of land en-  
closed between the first and last of the  
seven mouths of the Nile, which the Greeks  
called the Delta (the approximate triangle  
being viewed from the sea) of the Nile. It  
has since been extended to the land at the

mouths of other rivers, in some of which  
the likeness to the letter is scarcely to be  
recognized; indeed where it means little  
more than alluvial deposit.] Strand or  
alluvial land enclosed within the forks of a  
river and the sea, which forms its base.

Before the Restoration scarcely one ship from the  
Thames had ever visited the Delta of the Ganges.  
But, during the twenty-three years which followed  
the Restoration, the value of the annual imports  
from that rich and populous district increased from  
under one hundred to three hundred thousand.

*Family Pair*.

**Delusive. adj.** Apt to deceive; beguiling;

people, and *αγωγός* (from *αγω* = lead) =  
leader.] Ringleader of the rabble; popu-  
lar and factions orator.

Who were the chief *démagogues* and patrons of  
tumults, to send for them, to flatter and embolden  
them. — *Eikon Basilike*.

Demosthenes and Cicero, though each of them a  
leader, or as the Greeks called it, a *démagogue*, in a  
popular state, yet seem to differ in their practice. —  
*Swift*.

No schoolman could be a great man but as a  
schoolman. William of Ockham alone was a power-  
ful *démagogue*—scholastic even in his political  
writings, but still a *démagogue*. — *Milman, History*  
*of Latin Christianity*, b. xiv. ch. iii.

Dr. Grantley, however, has a holy horror of the  
impious *démagogue*, as on one occasion he called  
Bald. . . . Now, I will not say that the Archdeacon  
is strictly correct in stigmatizing John Bald as a  
*démagogue*, for I hardly know how extreme must be  
a man's opinions before he can be justly called so;  
but Bald is a strong reformer. — *A. Trollope, The*  
*Warden*, ch. ii.

I will notice first some Greek imitations, the  
time of whose meaning may in this way be pretty  
accurately noted; but which have either escaped  
the attention of our lexicographers, or have seemed  
to them unworthy of notice. We should scarcely  
suspect 'biography' to be so recent as it is, were it  
not for the fact that Dryden continually uses 'bi-  
graphia.' 'Cynosura,' employed by Hackett and  
Henry More, preceded 'cynosure'; 'démagogue' em-  
ployed also by Hackett, went before 'démagogue';  
bearing out the novelty of this last word in the  
middle of the seventeenth century, let me just  
remind you that Milton in his *Learned Language* finds  
in the use of 'démagogue' in the Iron Basilike, —  
'this goblin word,' as he calls it, an argument that  
King Charles could not have been author of the  
work. His words are so curious that, though quoted  
by Richardson and referred to by Todd, I will append  
them here: 'Setting aside the alightment of this  
goblin word (*démagogue*), for the king, by his leave,  
cannot coin English as he could money to be current,  
and it is believed this wording was above his known  
style and orthography, and accuses the whole com-  
pense to be conscious of some other author.' § 1 —  
*Archbishop of Treves, On some Deficiencies in our*  
*English Dictionary*, p. 26, and note.

**Demand. r. a.** [Fr. *démander*.]

Is dearly bought; 'tis mine, and I will have it.  
*Shakespeare, Merchant of Venice*, iv. 1.

tract the construction is demand [of] that

Why he hath thus demand'd my soul and body?

This matter is by the decree of the watchers, and

except what is in the hands of freeholders, are said to be *demania*. . . . As *demania* are lands in the lord's hand, manually occupied, some have thought this word derived from *de manu*; but it is from the French *demaine* which is used for an inheritance, and that comes from *dominium*.—*Blount*.

*Domanium* properly signifies the king's land in France, appertaining to him in property; and in like manner do we in some sort use it here in England; for all lands, it is said, are either mediately or immediately held of the crown. . . . it hath been observed that lands in the hands of a common person cannot be true *demania*; and certain it is that lands in the possession of a subject are called *demania* in a different sense from the *demania* lands of the crown; for *demania* or *domania* in the hands of a subject have their derivation *à domo*; because they are lands in his possession for the maintenance of his house; but the *demania* of the crown are held of the king, who is absolute lord, having proper *dominion*.—*Wood, Institutions*, 130.

That land which a man holds originally of himself, called *dominium* by the civilians, and opposed to feudum or fee, which signifies those that are held of a superior lord. It is sometimes used also for a distinction between these lands that the lord of the land has in his own hands, and hands of his lessee, demised or let upon a rent for a term of years or life, and such other lands appertaining to the said man as belong to free or copyholders; although the copyhold belonging to any manor, according to many good lawyers, is also accounted *demane*.—*Phillips*.

The defects in these acts . . . have hitherto been wholly ineffectual, except about the *demane* of a few gentlemen.—*Swift*.

#### Used adjectively.

The *demane* lands of the crown . . . were abundantly sufficient to support its dignity and magnificence.—*Hallam, View of the State of Europe during the middle Ages*, ch. viii, pt. 2.

fur of which animal is used in making hats.] Hat so called; (literally) half-beaver.

Not the least interesting figure that walked in procession at the second coronation of Richard III. was his only legitimate offspring, a child of ten years of age, Edward Earl of Warwick. Jase, Memoirs of King Richard III.* ch. v.

#### Demi-devil. s. Half-devil.

These three have robbed me; and this *demi-devil* (For he's a bastard one) had plotted with them To take my life. *Shakespeare, Temp.*, v. 1. (See also extract under *Demon* and *d.*, a. 2.)

#### Demigod. s. One who is of divine nature; half a god; hero produced by the cohabitation of divinities with mortals.

He took his leave of them, whose eyes had him farewell with tears, making temples to him as to a *demi-god*.—*Sir P. Sidney*.

Be gods, or angels, *demi-gods*. *Milton, Paradise Lost*, ix. 937. Transported *demi-gods* stood round, And men grew heroes at the sound, Enflam'd with glory's charms.

The Buddhists believe in the existence of Lokas, or heavens, each differing in glory, and serving as the temporary residences of *demigods* and divinities as well as of men whose etherealization is but incipient, and who have yet to visit the earth in future births and acquire in future transmigrations their complete attainment of Nirvana.—*Sir J. E. Tennant, Ceylon*, pt. iv. ch. ii. (See also last extract under *Demon*.)

#### Demigration. s. Banishment.

#### Demissa. adj. Let down; depressed; submissive; humble.

Nothing is humility a virtue made up of wearing of old clothes, or doing servile and mean employments by voluntary undertaking, or of sullen postures, or *demissa* behaviour, and artifice of lowly expressions; for these may become snares to invite and catch at honour, and they are collateral designs of pride and direct actions of hypocrisy. *Jeremy Taylor, Great Exemplar of Sanctity and holy Life*, 265. In . . . the preceding essay, the democratic form of government, and the power of the majority of the people, as characteristic of that form, have been referred to, as something clearly understood, and having a recognised meaning. The subject is, however, still involved in some obscurity. . . . (and) an attempt will be made to ascertain, in what the received opposition between aristocracy and *democracy*, as generally understood, really consists. . . . is, however, greater difficulty in defining the distinction between the two varieties of the latter [limited, as opposed to absolute] class of governments, which are respectively called aristocracies and *democracies*. The distinction between these two forms of government is commonly made to depend on the sovereign power residing, or not residing, in a majority of the people. If it is said, the sovereign power is vested in the people at large, or in a majority of the people, the government is a *democracy*; if only in a minority of the people, the government is an aristocracy.—*Sir G. C. Lewis, On the Influence of Authority in matters of Opinion*, appendix.

fatal shafts, by which I inward bleed! *Prince*. He [Sokrates] was often accustomed to hear, even from his childhood, a divine voice, interfering at moments when he was about to act, in the way of restraint, but never in the way of instigation. . . . Though late writers speak of this as the *dæmon* of Sokrates, he himself does not personify it, but speaks of it merely as a divine sign, a prophetic or supernatural voice. He was accustomed not only to obey it implicitly, but to speak of it publicly and familiarly. . . . Such was the *dæmon* or genius of Sokrates (as described by himself and conceived in the genuine Platonic Dialogues—a voice always prohibitory, and leaving exclusively upon his own personal conduct. That which Plutarch and other admirers of Sokrates conceived as a *dæmon* or intermediate being between gods and men, was looked upon by the fathers of the Christian church as a devil, by *La Certe* as one of the fallen angels, by some other commentators as mere ironical philosophy on the part of Sokrates himself.—*Grote, History of Greece*, pt. ii. ch. xxviii.

b. In *Law*. See extracts.

Demurrer [is] a kind of pause upon a point of difficulty in an action; for, in every action, the controversy consists either in the fact, or in the law: if in the fact, that is tried by the jury; if in law, then is the case plain to the judge, or so plain and rare, as it breedeth just doubt. I call that plain to the judge wherein he is assured of the law; and in such case the judge, with his associates, proceeds to judgment without further work. But when it is doubtful to him and his associates, then is there stay made, and a time taken, either for the court to think further upon it, and to agree, if they can; or else for all the justices to meet together in the Chancery-chamber, and, upon hearing that which the sergeants can say of both parts, to advise, and set down a law, whatsoever they conclude firm, without further remedy. — *Crompton*.

Demurrer [is] a pause or stop, put to any action, upon a point of difficulty, which must be determined by the court before any proceeding can be had therein; for, in every action, a point of controversy consists either in fact or in law: if in fact, that is tried by the jury; but if in law, that is determined by the court. A demurrer, then, is an issue upon a matter of law. . . . Demurrers are general without shewing any particular causes; or special where the causes of demurrers are particularly set down. . . . A demurrer in equity is nearly of the same nature as a demurrer in law; being an appeal to the judgment of the court whether the defendant shall be bound to answer the plaintiff's bill. — *Jacob, Law Dictionary*.

Applied to subjects other than legal.

The argument that evolution must come to a close in complete equilibrium or rest, . . . suggests that for aught which appears to the contrary, the universal death thus implied will continue indefinitely: it is legitimate to point out how, on carrying the argument still further, we are led to infer a subsequent universal life. But while this last inference may fully be accepted as a demurrer to the first, it would be unwise to accept it in any more positive sense. — *Herbert Spencer, First Principles*, § 130.

2. Inhabitant; occupant.

The vacant propensity that emptied so many a city of its *denizens* became a nuisance, for we read that early in the reign of Edward I. four men were chosen and sworn to 'take and kill all swine found wandering within the walls of the city, to whomsoever they might belong.' — *Tinck, Romance of London, Phlebotomy*, p. 104.

*Denizen*. Commonly explained as a foreigner enfranchised by the king's charter, one who receives the privilege of a native *ex denizatione regis*, from the Old French *denizen*, *denison*, a gift. But the general meaning of the word is simply one domiciled in a place. A *denizen* of the skies is an inhabitant of the skies. In the Liber Albus of the City of London the French *denizen*, the original of the English word, is constantly opposed to *foreign*, applied to traders within and without the privileges of the city franchise respectively. 'Et fut assavoir que ceste ordonnance se doit appliquer a *foreign* come a *denizen* de touz maneres de lieux *foreign* naitz dedens la dite franchise.' p. 350. 'Item qu' nulle pulletrie *denizen* ne venant par achatier nulle manere de pulletrie de nulle *foreign* pulletrie.' p. 355. 'Que chescun gaver laue assens terres ou fenelements de *denizen* ou de *foreign* deinz la franchise de la citee.' p. 418. The correlative is rendered in Latin by the terms *inter-natus* and *foreign*; 'mercatores *foreign* seu *inter-nati*.' p. 222; and as *foreign* and *foreign* are from Latin *foras*, French *fore*, without, while the meaning of *inter-natus* is simply one who is within, so *denizen* is from the old form *denizen*, in which the modern *denizen*, in, within, always appears in the Liber Albus. *Denizen*, ne dans le pays. (L'Esquieu.) — *Wedgwood, Dictionary of English Etymology*.

**Denizen, v. a.** Invest with the character of a *denizen*; naturalize. *Rare.*

Pride, lust, covetize, being several To these three places, yet all are in all; Mighd thus, their issue is incestuous. — *Shakespeare*.

These Anglo-Danes, thus *denizens*, were now also natives, differing in nothing from the Anglo-Saxons or English, as they were then called, except in some difference of dialect, which was rapidly lessening, and, perhaps, in retaining more predilection for some of their heathenish customs. — *Southey, Lives of the British Admirals*, ch. . . .

**Dennot, s.** [? person so named.] Carriage so called, with two wheels and one horse, a variety of the gig: (the term and vehicle common about 1825).

In those days men drove 'gies' as they since have driven stanhopes, tilburies, *dennots*, and cabriolets, and I rather plied myself upon my 'turn out'; my chestnut horse was a fast trotter, and in little more than three quarters of an hour, from Westminster Bridge, I reached mine host's retreat. — *Theobald, Book, Gilbert Givens*, vol. ii. ch. xi.

**Denominable, adj.** Capable of being denominated. *Rare.*

An inflammation either simple, consisting only of an hot and sanguineous affluxion, or else *denominable* from other humours, according to the predominancy of melancholy, leem, or choler. — *Sir T. Browne, Vulgar Errors*, iii. 3. (Rich.)

**Denominate, adj.** Named.

Amongst the excellent acts of that king, one above all hath the pre-eminence. It was the erection and institution of an order or society which we call Solomon's House; . . . Some think it beneath the founder's name a little corrupted, as if it should be Solomon's House. But the records write it as it is spoken. So as I take it to be *denominated* of the king of the Hebrews, which is famous with you and no stranger to us. — *Bacon, New Atlantis*, (Ord. 18.)

**Denominate, v. a.** [Lat. *de-nominatus*, pass. part. of *de-nominare*; from *nomen* = name.] Name; give a name to. See Denomination.

Their commendable purpose being not of every one understood, they have been in latter ages constructed as though they had superstitiously meant either that those places, which were *denominated* of angels and saints, should serve for the worship of so glorious creatures; or else those glorified creatures for defence, protection, and patronage of such places. — *Hosker, Ecclesiastical History*, b. v.

Predestination is destructive to all that is established among men, to all that is most precious to human nature, to all that is most precious to us men, understanding and will, for what use can we have of our understandings, if we cannot do what we know to be our duty? And if we act not voluntarily, what exercise have we of our will? — *Blount, On Fundamental*.

(See also under Denominative, adj.)

**Denomination, s.**

1. Name significant and connotative. (A fuller explanation of this definition may

be got by comparing it with Connotation and contrasting it with Denotation. It agrees with the former in being founded upon some attribute belonging to the object to which it applies; such object having such denomination because it possesses the quality implied by the name; e.g. *Christian* is the denomination of a person whose religion is *Christianity*. Hence, we cannot use a denominative name without knowing something about its bearer. With names that are merely denotative, and with proper names, which are *not* denominations, this is not the case. Although, in general, they apply to the members of certain classes, they tell us nothing about the characteristics of those classes; besides which they may be applied to objects other than those to which they were originally attached, as is the case when the names of men or women are given to ships, dogs, racehorses, and the like. Here they simply *denote* the object, or mark it off from all others; without, however, giving us a single quality or attribute.

The liking or disliking of the people gives the play the denomination of good or bad; but does not really make or constitute it such.—*Dryden*.  
All men are sinners: the most righteous among us must confess ourselves to come under that denomination.—*Rogers*.

2. Sect, class, or division: (especially of *Christians*).

Philosophy, the great idol of the learned part of the heathen world, has divided it into many sects and denominations: as Stoicks, Peripateticks, Epicureans, and the like.—*South*.

3. In *Rhetoric*. See extract.

By a figurative speech called *denomination* (whereby the hole is named by part) they named the hole 'Hail'; that is, powder; for as much as in many places the face of this strand (Higginola) is rough by reason of the craggy mountains.—*Eden, Translation of P. Martyr*, 125. (Ord MS.)

**Denominational. adj.** Relating to, consisting in, or constituting a denomination: (its chief application being to divisions in the way of religious doctrine; whence it often coincides with *sectarian*, than which it is a less invidious term).

Their zeal was chiefly shown in the defence of their denominational differences.—*Huckle, History of Christianity in England*, vol. i. ch. iii.

**Denominative. adj.** Having the character of a denomination.

Connotative names have hence been also called *denominative*, because the subject which they denote is *denominated* by, or receives a name from, the attribute which they connote. Snow, and other objects, receive the name white, because they possess the attribute which is called whiteness; James, Mary, and others receive the name man, because they possess the attributes which are considered to constitute humanity. The attribute, or attributes, may therefore be said to *denominate* those objects, or to give them a common name.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 6.

**Denominative. s.** That which has the character of a denomination.

This figure of my body, is my body, by the rule of denominatives, signifies. This is the figure of my body.—*Jeremy Taylor, Real Presence of Christ in the Sacrament*. (Ord MS.)

**Denominative. s.** That which denominates.  
Both the sense of one name should have a common denominator.—*Nic T. Browne, Vulgar Errors in Arithmetic*. See extract.

The denominator of a fraction, is the number below the line, showing the nature and quality of the parts which any integer is supposed to be divided into: thus in  $\frac{2}{3}$  the denominator shows you, that the integer is supposed to be divided into 3 parts, or half quarters; and the numerator 2 shows, that you take 2 of such parts, i.e. three quarters of the whole.—*Harris*.

When a single broken number or fraction hath for its denominator a number consisting of an unit, in the first place towards the left hand, and nothing but cyphers from the unit towards the right hand, it is then more aptly and rightly called a decimal fraction.—*Cocker, Arithmetic*.

Denominator of any proportion, is the quotient arising from the division of the antecedent by the consequent: thus 6 is the denominator of the proportion 'but 30 hath to 3, because 6) 30 (5. This is

also called the exponent of the proportion, or ratio.—*Harris*.

**Denotable. adj.** Capable of being denoted.  
In hot regions, and more spread and dissipated flowers, a sweet savour may be allowed, denotable from several human expressions.—*Sir T. Browne, Microscopica*, p. 25.

**Denotate. v. a.** Convey a denotation.  
Wherefore serve names, but to denote the nature of things?—*Bishop Hall, Against Romaniacs*, sec. 28. (Ord MS.)

**Denotation. s.** Marking off, or separation, of anything. (When this is conveyed by a name, the name merely serves for this purpose, and suggests no attribute connected with the object to which it applies. See Connotation, Denomination, and Definition. Proper names are preeminently denotative; telling us that such an object has such a term to denote it, but telling us nothing as to any single attribute.)

Mind and conscience are distinguished—the former being properly the *denotation* of the faculty merely speculative or intellectual; this latter, of the practical judgment.—*Hammond, Of Conscience*.  
Language, as Sir James Mackintosh used to say of governments, 'is not made, but grows.' A name is not imposed at once and by previous purpose upon a class of objects, but is first applied to one thing, and then extended by a series of transitions to another and another. By this process . . . a name not infrequently passes by successive links of resemblance from one object to another, until it becomes applied to things having nothing in common with the first things to which the name was given; which, however, do not, for that reason, drop the name. . . . When a name has fallen into this state, (it) can only be made serviceable by stripping it of some part of its multiform denotation, and confining it to objects possessed of some attributes in common, which it may be made to connote. Such are the inconveniences of a language which 'is not made, but grows.' Like the governments which are in a similar case, it may be compared to a road which is not made but has made itself: it requires continual mending in order to be passable.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 7.

**Denotative. adj.** Indicating denotation.  
What are the effects of sickness? The attention it produces is so *denotative*, that a person is known to be sick by those who never saw him in health.—*Letters upon Phlegmomy*, p. 121.

**Denote. v. a.** See Denotation.  
Proper names are not connotative: they denote the individuals who are called by them; but they do not indicate or imply any attributes as belonging to those individuals. When we name a child by the name Paul, or a dog by the name Caesar, these names are simply marks used to enable these individuals to be made subjects of discourse.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 6.

When the name which is the subject of the proposition is a general name, we may intend to affirm or deny the predicate, either of all the things that the subject denotes, or only of some. When the predicate is affirmed or denied of all and each of the things denoted by the subject, the proposition is universal; when of some non-assignable portion of them only, it is particular. Thus, All men are mortal; Every man is mortal; are universal propositions. No man is immortal, is also an universal proposition, since the predicate, immortal, is denied of each and every individual denoted by the term man; the negative proposition being exactly equivalent to the following, Every man is not-immortal. But 'some men are wise,' 'some men are not wise,' are particular propositions; the predicate wise being in the one case affirmed and in the other denied not of each and every individual denoted by the term man, but only of each and every one of some portion of those individuals, without specifying what portion.—*Ibid.*

**Denotement. s.** Denotation. *Rare*.  
In a man that's just,  
They are close denotements working from the heart  
That passion cannot rule.  
*Shakespeare, Othello*, iii. 3.

**Denounce. v. a.**

Shall them admonish, denouncing wrath to come

They impose their wild conjectures for laws upon others, and denounce war against all that receive them not.—*Dr. H. More, Decay of Christian Piety*.

2. Threaten by some outward sign or expression.

He ended frowning, and his look denounc'd  
Desperate revenge, and battle dangerous  
To less than gods.  
*Milton, Paradise Lost*, ii. 100.

The sea grew white; the rolling waves from far.  
Like heralds, first denounce the wat'ry war.  
*Dryden*.

3. Cry out against; stigmatize.

In the comparatively correct age in which our lot is cast, it would be almost as unjust to apply our more severe standard to him and his associates, as it would have been for the Ludlows and Hutchinsons of the seventeenth century, in writing a history of the Roman empire, to denounce the immorality of Julius Cæsar.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Per-

Glare on the nations, and denounce from thence?

**Denishing. s. or verbal abs.** [Derivative the true derivation: the *Denshire* lad, evidently from that county, is one of the characters in the Yorkshire Tragedy.] See extract.

Burning of land, or burn-bating, is commonly called *denishing*, that is *denouising* or *denigh-shipping*, because most used, or first invented there.—*Mortimer, Husbandry*.

**Density. s.** Character of dense objects.  
(For example see extract under *Dense*.)

They are what naturalists call serrated or *dentated* hills; the inside of them, towards the edge, being thickly set with parallel or concentric rows of short, strong, sharp pointed prickles. These, though they should be called teeth, are not for the purpose of mastication. They form a filter.—*Paley, Natural Theology*, ch. xli. (Rich.)

It may possess a stomach with strong muscular walls and a *dentated* lining for trituration, and a second stomach with glandular walls for digestive solution or clymification, and thus present an alimentary canal as complicated and as highly elaborated as in the bird.—*Owen, Lectures on Comparative Anatomy*, lect. viii.

**Dentation, s.** Toothing; toothed character.

Should it be said that by continual endeavours to stoop out the tongue, the woodpecker's species may, by degrees, have lengthened the organ itself, beyond that of other birds, what account can be given of its form, of its tip? How, in particular, did it get its barb—its *dentation*?—*Paley, Natural Theology*, ch. xlii. (Rich.)

**Denticle, s.** [Lat. *denticulus* = small tooth.]

This projects as a slender *denticle*.—*Owen, Lectures on Comparative Anatomy*.

The third tissue, when present, is situated between the *dentine* and enamel, and is called *dentalium*. *Dentine* consists of an organized animal basis, disposed in the form of extremely minute tubes and cells, and of earthy particles.—*Owen, in Todd's Cyclopaedia of Anatomy and Physiology*, Teeth.

**Dentist, s.** Dental surgeon.

A kind *dentist* restored my spirits by declaring that he was possessed of an art which would prevent all bad consequences, and continue the beauty of my nearly ornamented set between rubies (for so he expressed himself) unassailed during life.—*Knox, Winter Evenings*, ii. 373.

**Dentistry, s.** Dental surgery.

Notwithstanding the merit possessed by a few of the German works upon the teeth, practical *dentistry* has not attained a high degree of perfection in the German states and provinces as it has in some other countries.—*Harris, Dictionary of Dental Science, Dental Surgery*.

**Dentition, s.** Teething.

*Dentition* and location are, for the most part, contemporaneous; teething and speaking usually come and go together; the child cannot speak till he put forth his teeth, neither can he speak well when he sheds them, nor leave his lisping till they come again.—*Smith, Portraits of Old Age*, p. 110; 1100.

**Dentise, v. a.** Have the teeth renewed; breed, or cut, teeth. *Rare*.

**Denudation, verbal abs.** Stripping; laying bare; (one of its chief special applications is in *Geology*, where it denotes the washing or gnawing away of large superincumbent masses of land by water, so as to bring to the surface the underlying strata).

There must be a *denudation* of the mind from all these images of our phantasy, how pleasing never, that may carry our thoughts aside from those better objects.—*Bishop Hall, Mount Sini*, § 10.

The earth's solid crust undergoes changes that supply another group of illustrations. The *denudation* of lands and the depositing of the removed sediment in new strata at the bottoms of seas and lakes, is a process throughout which motion is obviously determined in the same way as in that of the water effecting the transport.—*Herbert Spencer*.

I have already mentioned that the portion of a series of strata which during the formation of a fault has been elevated above the general level of the surface, is sometimes swept away, and leaves no vestige of the disturbance. . . . This clearing away . . . is also common when an artificial axis has been formed, the softer beds being washed away. . . . The process . . . is called *denudation*. When a valley is formed simply by the sweeping away of a portion of strata regularly bedded and undisturbed, it is usually called a valley of *denudation*; but when, in consequence of some subterranean movement, the lower level is in a hollow, and is surrounded by hills of the upper strata dipping away in all directions from it, there is then said to be a valley of elevation.—*Austen, Geology*, vol. i, ch. ii, p. 37.

**Denude, v. a.** [Lat. *denudo*, pass. part. *denudatus*, from *nudus* = naked.] Strip; make naked; divest.

The best sign and fruit of *denying* ourselves, is mercy to others.—*Bishop Sprat*.

Tell Mrs. W. her postscripts are always agreeable. They are so legible too. Your *decaluate* is terrible, dark as Egyptian. . . . Likelihood, for instance, is thus typical. I should not wonder if the constant talking out of such paraphrases is the cause of that weakness in Mrs. W.'s eyes, as she is tenderly pleased to express it. Dorothea, I hear, has mounted spectacles; so you have *decaluated* two of your dearest relations in life. Well, God bless you, and continue to give you power to write with a finger of power upon our hearts what you fail to impress in corresponding lucidness, upon our outward eye-sight!—*Lamb, Letter to Wordsworth*, April 9, 1816.

**Deodand, s.** [Lat. *Deo* = to God, *dandum* = thing to be given.] See extract.

**Deodar, s.** [Hindustanee.] Sacred Indian fir (Cedrus Deodara), akin to the larch, and of recent introduction (1822), but naturalized in this country; (called also *Deodura* and *Deodar* cedar, the word being used as both *substantive* and *adjective*).

*Deodar* cedars grafted on the larch take freely, but soon die. . . . When, however, varieties of the yew are inserted upon the common yew, and *deodara* on cedars of Lebanon, the plants so obtained are permanent.—*Lindley, Theory and Practice of Horticulture*, b. ii. ch. xii.

**Deodate, s.** [Lat. *datum* = thing given, as opposed to *dandum* = thing to be given.] Gift or offering to God, or in the name of God. *Rare*.

**Deoxidation.** *s.* In Chemistry. Process by which any compound is deprived of its oxygen; reduction.  
That animal life is immediately or mediately dependent on vegetal life is a familiar truth; and that, in the main, the processes of animal life are opposite to those of vegetal life, is a truth long current among men of science. Chemically considered, vegetal life is chiefly a process of de-oxidation, and animal life chiefly a process of oxidation; chiefly, we must say because in so far as plants are exponents of force for the purposes of organization, they are oxidizers (as is shown by the exhalation of carbonic acid during the night); and animals, in some of their minor processes, are probably de-oxidizers.—*Herbert Spencer*.

**Deoxidize.** *v. a.* In Chemistry. Reduce from the state of an oxide; deprive of oxygen.  
If again we look at a smaller group, as the metallic oxides, we see that whereas those metals that have atoms nearest in weight to the atoms of oxygen, cannot be separated from oxygen by heat, even when it is joined by a powerful collateral affinity; those metals which differ more widely from oxygen in their atomic weights, can be de-oxidized by carbon at high temperatures; and those which differ from it most widely, combine with it very reluctantly, and yield it up if exposed to thermal undulations of moderate intensity. And here indeed, remembering the relations among the atomic weights in the two cases, may we not suspect a close analogy between the de-oxidation of a metallic oxide by carbon under the influence of the longer ethereal waves, and the de-carbonization of carbonic acid by hydrogen under the influence of the shorter ethereal waves?—*Herbert Spencer, Data of Biology*.

In English, the rule, subject to the remark under Excellent, is that when a word is derived from a Latin participle it is split with the characteristic vowel, *a* or *e*, as the case may be, when from the French with *a*. ence, with their respective congeners, are concurrent forms rather than instances of incorrect spelling.]

This form of expression gives . . . an instrument of criticism in investigating the origin of certain deponent verbs. In all languages there is a certain number of verbs denoting actions, reciprocal or mutual to the agents. Such are the words embrace, converse, strike against, wrangle, fight, rival, meet, and several more. There are also other words where the existence of two parties is essential to the idea conveyed, and where the notion, if not that of reciprocal action, is akin to it; viz. reproach, compromise, approach, &c. Now in certain languages (the Latin and Greek) some of these verbs have a passive form; i.e. they are *deponents*—*loquor*, *colloquor*, *luctor*, *reluctor*, *amplector*, *amator*, *coactor*, *inspector*, Latin: *φιλοσοφώμαι*, *φιλοσοφώμαι*, *μαχόμεαι*, *μαχόμεαι*, *ἀδελφίζομαι*, *ἀδελφίζομαι*, *ἀντιβόωμαι*, &c. Greek. Hence arises the hypothesis, that it is to their reciprocal power on the one hand, and to the connection between the passive, reflective, and reciprocal forms on the other, that these verbs owe their deponent character.—*Dr. R. G. Latham, Transactions of the Philological Society*, March 23, 1854.

**Depopulate.** *v. a.* [Lat. *depopulor*.] Unpeople; lay waste; destroy inhabited countries.

**Depopulator.** *s.* One who depopulates; destroyer of mankind; waster of inhabited countries.

On no occasion did the character of William show itself in a more striking manner. 'Is this business over?' he said; 'or will your horse unke more light?' 'On my honour, sir,' answered Hamilton, 'I believe that they will.' 'Your honour!' muttered William; 'your honour!' That half-suppressed exclamation was the only revenge which he condescended to take for an injury for which many sovereigns, far more affable and gracious in the ordinary deportment, would have exacted a terrible retribution.—*Maccarty, History of England*, ch. xvi.

**Deposable.** *adj.* Capable of being, or liable to be, deposited.

Henceforth they shall be only keepers of the great seal, which for title and office are *deposables*.—*Howell, Familiar Letters*. (Ord MS.)

—*Laub, Letter to Worlesworth, April 9, 1816.*

2. In *Geology*. Soil, or matter, left so as to form a layer or stratum.

Language, then, from whatever point of view we  
regard it, seems to confirm instead of weakening the  
inference to which we are irresistibly led by  
geology, history, and archeology,—that man is a  
very much nobler and more exalted animal than the  
shivering and naked savages whose squalid and  
ghastly relics are exhumed from Danish kjokken-  
møddings, and glacial *deposits*, and the stalactite  
flooring of freshly-opened caves.—*Farrar, Chapters on Language, ch. iv.*

Infancy and Childhood, lect. xxiv.*

banks which, besides employing or issuing the money  
intrusted to them by others, issue money of their  
own, or notes payable on demand. . . . Until the re-  
cent introduction of joint-stock banks, none of the

interest on *deposits*; nor is it yet allowed by the  
great majority of the metropolitan private bankers.  
—*McCulloch, Commercial Dictionary, Banks.*

**Depositary. s.** One with whom, or that in which, anything is lodged in trust.

The universities are the *depositaries* of the public  
wisdom and virtue.—*Bishop Hurd.*

Experience proves that the *depositaries* of power,  
who are mere delegates of the people—that is, of the  
majority—are quite as ready (when they think they  
can count on popular support) as any organs of  
oligarchy to assume arbitrary power, and encroach  
unduly on the liberty of private life.—*J. S. Mill, Principles of Political Economy, li. 368.*

**Depositing. verbal abs.** Laying down: (in the extract in the sense of *abandoning*).

The difficulty will be to persuade the *depositing*

nonici.*

2. Act of degrading a prince from some-  
reignty; depose.

After his *deposition* by the council of Lyons, the  
affairs of Frederic II. went rapidly into decay. With  
every allowance for the enmity of the Lombards and  
the jealousy of Germany, it must be confessed that  
the proscriptio of Innocent IV. and Alexander IV.  
was the main cause of the ruin of his family. There  
is, however, no other instance, to the best of my  
judgment, where the pretended right of *deposing*  
kings has been successfully exercised.—*Hallam, View of the State of Europe during the middle Ages,  
ch. vii. pt. 2.*

3. Deposit.

The conclusion obtained by this new application  
of the method is, that criteria paribus the *deposi-  
tion* of dew is also in some proportion to the power of  
radiating heat; and that the quality of doing this  
abundantly (or some cause on which that quality  
depends) is another of the causes which promote the  
*deposition* of dew on the substance.—*Herbert  
Spencer, First Principles of Psychology.*

**Depositor. s.** One who deposits money in a bank.

It is plain that nothing could be more important,  
in the view of diffusing habits of forethought and  
economy amongst the labouring classes, than the  
establishment of Savings Banks, where the smallest

at compound interest, and are paid, with their ac-  
cumulations, the moment they are demanded by the  
*depositors*.—*McCulloch, Commercial Dictionary, Banks for Savings.*

**Depository. s.** Place wherein, or person

Italy was still, as might be expected, the chief *depo-  
sitory* of ancient writings.—*Hallam, Introduction to  
the Literature of Europe in the fifteenth, sixteenth,  
and seventeenth centuries, pt. i. ch. i. § 9.*

A private man could do little for the good cause.

might render incalculable services.—*Macaulay, His-  
tory of England, ch. xxi.*

**Depositum. s.** [Lat.] Deposit.

Compare the tales of the elder Pliny with the

age.—*Warburton, Critical and philosophical In-  
quiry into the Causes of Prophecies and Miracles, p. 5.*

their institution, but generally by corruption of  
manners.—*Swift.*

2. State of being made bad; degeneracy;  
depravity.

We have a catalogue of the blackest sins that hu-  
man nature, in its highest *depravation*, is capable  
of committing.—*South.*

The ancients observed, that a man who had ac-  
quired great power and eminence in a state, being  
rendered giddy by his elevation, often lost his self-  
command. . . . His newly-acquired power *depraved*  
his moral character—the *depravation* of his moral  
character destroyed his judgment, and, having lost  
his judgment, his career became like that of a ship  
without a rudder.—*Sir G. C. Lewis, On the Influence  
of Authority in Matters of Opinion, ch. iii.*

3. Defamation; censure. *Obscure.*

Stabborn critics are apt, without a theme

from *pravus* = wicked.] Vitiates; corrupt;

*deprave*, the same.—*Hosier, Ecclesiastical Poli-  
tics.*

A taste which plenty does deprave,  
Lentils lawful good, and lawless ill does crave.

*Dryden.*

**Depraved. part. adj.** Vitiated; corrupted;  
made bad.

that excellent invention [the press]; the name of  
his majesty defamed, the honour of parliament *depraved*;  
the writings of both *depravedly*, antici-  
patively, counterfeitedly imprinted.—*Sir T. Browne,  
Religio Medici, to the reader.*

**Depravedness. s.** Attribute suggested by  
*depraved*; corruption; taint; contami-  
nation; vitiated state.

What sins do you mean? Our original *depraved-  
ness*, and proneness of our eternal part to all evil.—  
*Armstrong.*

1767.*

**Depricable. adj.** Capable of being, or liable  
to be, averted or begged off.

I look upon the temporal destruction of the  
greatest king as far less *depricable* than the eternal  
damnation of the meanest subject.—*Bishop Basilide,  
ch. vii.*

**Deprecate. v. a.** [Lat. *deprecatus*, pass. part.  
of *deprecor* = beg, beg off; from *precor* =  
pray.]

1. Beg off; pray deliverance from; avert by  
prayer.

Poverty indeed, in all its degrees, men are easily  
persuaded to *deprecate* from themselves.—*Bogers.*  
The judgments which we would *deprecate* are not  
removed.—*Bishop Smalbridge.*

2. Implore mercy of.

and misrepresent.—*Addison.*

**Depreciation. s.** Lowering in the way of price or value; disparagement.

It is fruitless to inquire which of two acts of duty be the more acceptable, where both are indispensable; and dangerous, it would seem, to form comparisons of two indispensable duties, where the preference of one tends to the depreciation of the other.—*Bishop Burgess, On the Divinity of Christ*, p. 31.

**Depredate. v. a.** [Lat. *prædatus*, pass. part. of *prædare* = rob; from *præda* = booty.] Rob; prey on.

**Depredator. s.** Robber.

It is reported, that the shrub called our lady's seal, which is a kind of briary, and colicwort, set men together, one or both will die; the cause is, for that they be both great depredators of the earth, and one of them starveth the other.—*Bacon*.

**Depression. s.**

2. Sinking or falling in of a surface.

The beams of light are such subtle bodies, that, in respect of them, even surfaces, that are sensibly smooth, are not exactly so; they have their own degrees of roughness, consisting of little protuberances and depressions; and consequently such inequalities may suffice to give bodies different colours, as we see in marble that appears white or black, or red or blue, even when most carefully polished.—*Boyle*.

3. Act of humbling; abasement.

Depression of the nobility may make a king more absolute, but less safe.—*Bacon*.

Far from seeking to raise himself by their depression, his [Erskine's] vanity was of the best-natured and least selfish kind; it was wholly social and tolerant, mild, as it were, generous; any, he always seemed to feel the desire of others with fully more enthusiasm than he ever displayed in recommending his own.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Erskine*.

Those whom end in destruction, and eternal deprivation of being.—*Bentley*.

The system of exterminating heresy by capital executions and wholesale deportation, may be considered as exploded in civilized Europe; but the discouragement of religious error by civil disabilities—by exclusion from certain political rights—still maintains its ground in some cases. Deprivation of civil rights is a species of penal infliction, and has been so considered in all systems of criminal law. The objection to its use for the purpose of repressing religious error, though less in degree, is therefore the same in principle.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix.

It is every man's duty to labour in his calling, and not to *despond* for any misarriages or disappointments that were not in his power to prevent.—*Sir R. L'Estrange*.

The learned leeches in despair depart, And shake their heads, *desponding* of their art.

*Dryden*.

Others depress their own minds, *despond* at the first difficulty; and conclude that making any progress in knowledge, farther than serves their ordinary business, is above their capacities.—*Locke*.

**Despondency.** *s.* Despair; hopelessness; desperation.

The death of Sir Edmundbury Godfrey has generally been attributed to his own act, from constitutional and hereditary melancholy, his father having destroyed himself during a fit of mental *despondency*; but, considering the use that was made of it by the incendiaries engaged in the fabrication of the popish plot, that it was the hinge on which the whole of the machinery turned, there is every reason to believe that the murder was perpetrated by themselves, for the purpose of charging it upon those who were marked out for their victims. — *Agnes Strickland, Lives of the Queens of England, Catherine de Braganza*.

**Despondent.** *adj.* Despairing; hopeless; without hope.

L'Estrange*.

**Despot.** *s.* [Gr. *despotes* = master.]

1. Title, under the Byzantine empire, of certain independent, or approximately independent, dynasts, princes, or rulers. (The Wallachian and Moldavian terms, *Hospodar* (*Gospodar*), are forms of the same word; and it is these that are probably meant by the word *Dacian* in the extract from Johnson. With this sense, the term, being a title, is a *proper*, rather than a *common*, name, and is generally preceded by the definite article; the domain over which the *Despot's* rule extends, and his station, being a *Despotat*: see extracts.)

Paleologus was both by the patriarch and the young emperor honored with the title of the *despot*, another step into the empire.—*Kuonles, History of the Turks*, 112. (Ord 318.)

That portion of the Byzantine empire situated to the west of the range of Hindus, was saved from a feudal domination by Michael... The *despotat* of Epirus was merely a change in the name of the government... The absence of all feudal organization, and the employment of a large body of native militia, mingled with hired mercenaries, gave the *despotat* of Epirus a Byzantine type... The *despotes*

of Epirus long ruled their dominions by employing the various resources of the different classes of their subjects for the general good... The wealth of the Greeks enabled the *despotes* to maintain a respectable army of mercenaries... Almost the only facts that have been preserved relate to the wars and alliances of the *despotes* and their families with the Byzantine emperors and the Latin princes... They all assumed the title of Angeli, Komnenoi, Ducas; and the title of *despot*, by which they are generally distinguished, was a Byzantine honorary distinction, never borne by the earlier members of the family until it had been conferred on them by the Greek emperor. Michael I., the founder of the *despotat*, distinguished himself by his talents as a soldier and a negotiator. — *Futley, Medieval Greece and Trebizond*, ch. vi. s. 1.

2. Absolute ruler: (generally in a *bad* sense, the rule of a despot in this sense being a *Despotism*).

An absolute prince; one that governs with unlimited authority. This word is not in use except as applied to some Eastern prince—as, the *despot* of Scoria. So far Dr. Johnson. Mr. Mason observes, that 'the foregoing remark was true enough at the time it was written; but the French revolutionists have been very liberal in conferring this title.' If Dr. Johnson or Mr. Mason had opened the old dictionary of Cotgrave, the word would have presented itself to them, not as one of exclusive or modern use only; for thus Cotgrave writes, two centuries since: *Despote, un despot*, the chief or sovereign lord of a country. — *Todd*.

**Despotat.** *s.* See *Despot*, 1.

**Despotie.** *adj.* Absolute in power; unlimited in authority; arbitrary; irresponsible.

God's universal law

Gave to the man *despotic* power. — *Milton, Samson Agonistes*, 1053.

Over his form. — *Milton, Samson Agonistes*, 1053. We may see in a neighbouring government the ill consequences of having a *despotic* prince, for notwithstanding there is vast extent of lands, and many of them better than those of the Swiss and Grisons, the common people among the latter are in a much better situation. — *Addison*.

Patriots were forced to give way to the madness of the people, who were now wholly bent upon single and *despotic* slavery. — *Swift*. (See also first extract under *Despotism*.)

**Despotical.** *adj.* Same as *Despotic*: (this latter the *commoner* form).

In all its directions of the inferior faculties, reason conveyed its suggestions with clearness, and enjoined them with power; it had the passions in perfect subjection; though its command over them but persuasive and political, yet it had the force and *despotic*. — *South*.

**Despotically.** *adv.* In a despotic manner.

Forces we well distinguished between a merely *despotically* regal, and a political or civic monarchy. — *Burke*.

**Despotism.** *s.* State, domain, or rule of a despot; autocratic, or tyrannical, character of a government.

He [William the Conqueror] permitted no rapine but his own. The feuds of private revenge, the lawlessness of robbery, were repressed. But this was the tranquillity of an imperious and violent *despotism*, the degree of which may be measured by these effects, in which no improvement of civilization has any share... From the reign of Stephen... we are enabled to trace the character of the government by existing records... It was not a sanguinary *despotism*.... It [Magna Charta] is still the keystone of English liberty... and, if every subsequent law were to be swept away, there would still remain the bold features which distinguish a free from a *despotic* monarchy. — *Hallam, View of the State of Europe during the middle Ages*, pt. ii. ch. viii.

In his [Hobbes's] chapter on despotic monarchy, he again denies that governments were founded on original contract. The power of one man, in the origin of political society, was absolute; and Aristotle was wrong in supposing a fabulous golden age, in which kings were chosen by suffrage. *Despotism* is distinguished from monarchy by the subjects being truly slaves, without a right over their properties; but as the despot may use them well, even this is not necessarily a tyranny. Monarchy, on the other hand, is the rule of one man according to the law of nature, who maintains the liberties and properties of others as much as his own. As this definition does not imply any other restraint than the will of the prince imposed on himself [Hobbes] labours under the same difficulty as Montesquieu. Every English reader of the *Esprit des Loix* has been struck by the want of a precise distinction between *despotism* and monarchy. Tyranny differs, Bodin says, from *despotism*, merely by the personal character of the prince. But severity towards a sedition-prone populace is not tyranny; but here he enforces the law government of Henry II. Tyrannicide he justifies in respect of an usurper who has no title except force; but not as to lawful princes, or such as have become so by prescription. — *Id., Introduction to the Literature of Europe in the fifteenth*

sixteenth, and seventeenth Centuries, pt. ii. ch. iv. § 51.

**Desynonymizing.** *verbal abs.* Process by which a word is desynonymized; act of one who desynonymizes.

By and by, however, as a language becomes itself an object of closer attention, at the same time that society, advancing from a simpler to a more complex state, has more things to designate, more thoughts to utter, and more distinctions to draw, it is felt a waste of resources to employ two or more words for the signifying of one and the same object. Men feel, and rightly, that with a boundless world lying around them and demanding to be named, and which they only make their own in the measure, and to the extent that they do name it, with infinite shades and varieties of thought and feeling subsisting in their own minds, and claiming to find utterance in words, it is a mere and wanton extravagance to expend two or more signs on that which could adequately be set forth by one—an extravagance in one part of their expenditure, which will be almost sure to house in, and to be punished by, a corresponding scantiness and straitness in another. Some thought or feeling will wholly win its adequate sign, because another has two. Hereupon that which has been well called the process of '*desynonymizing*' begins—that is, of gradually discriminating in use between words which have hitherto been accounted perfectly equivalent, and, as such, indifferently employed. It is a positive enriching of a language when this process is at any point felt to be accomplished, when two or more words, once promiscuously used, are felt to have had each its own

peculiar domain assigned to it, which it shall not itself overstep, upon which the others shall not encroach. This may seem at first sight but as a better regulation of old territory; for all practical purposes it is the acquisition of new. It is not to be supposed that this *designating* process is effected according to any prearranged purpose of plan. . . . It is to Colonize, we, over the word *designating*, against which indeed purists will object that it is of hybrid formation, the prefix Latin, the body of the word Greek; and his own contributions direct and indirect in this province are perhaps both more in number and more important than those of any English writer; as, for instance, the disentanglement of 'faulderism' and 'enthusiasm,' which we mainly owe to him; of 'keenness' and 'subtlety,' 'poetry' and 'poesy;' and that on which he himself laid so great a stress, 'reason' and 'understanding.' — *Archbishop Trench, Lectures on the Study of Words*, lect. vi.

If there is one grievance which, more than any other, has been a stock subject of complaint against the Roman Catholic Church, it is the way in which the confessional is supposed to work, especially in Ireland, as a bar to the discovery of crime. Take him to *dévelop*, if you can,

And hew the block off and get out the man.

*Pope, Dunciad*.

2. In its later sense, and one which is now common, not only in biological science, but also in historical, political, and theological literature, this notion of the exhibition of the object developed being effected by taking away its *external* parts is superseded by that of growth determined by either *internal* influences, or some so-called final cause; development meaning growth with the full progress and advancement proper to the original idea, intention, or powers in *posse* of the object developed.

With the great accession of facts with which comparative anatomy has since been enriched... we may now attempt a more exact enumeration of the resemblance which a higher organized animal presents to those of a lower order in its progress to maturity... All animals resemble each other at the earliest period of their development... The *Hydra*, after simulating the higher Infusoria by their spheroid shapes and active movements... mark their low molluscous character beneath the polype form. The acellular mollusks typify more fishy and transiently the polype state... the hewer retaining the acellular condition, the unitary ascending in its development to the acquisition of its appropriate head, jaws, and organs of sense. Thus all mollusks are at one period like mollusks, at another are acellular; but few typify the polype, and none the acellular, or echinoderm. In the encephaloid division we meet with many interesting examples of the prevalence of unity of organisation at early periods, which is lost in the diversity of the special forms as development proceeds... Thus, as we trace the development of the molluscous animal, we find the application of the term unity of organisation progressively narrowed as development advances: for whilst all mollusks manifest, at their earliest and most transitory period, a resemblance to the lowest or monadiform acolytes, only the lowest order of mollusks in the next stage of development represents the polype; and all analogy to the radiated type is afterwards lost, until we reach

the summit of the molluscous series... In the great articulated branch of the animal kingdom there is unity of organisation with the molluscous series at the earliest periods of development, in so far as the germ divides and subdivides and multiplies itself.

... Unity of organisation prevails through a very great proportion of the articulated series in reference to their primitive condition as apical worms. Only in the higher arachnida, the nucleated cells are aggregated under a form more nearly like that of the mature animal... In lower or more vermiform conchyloids, the rudimental conditions of the locomotive appendages, which are retained in the mollusks and the lower crustaceans, are passed through in the progress of the development of the complex-jointed limbs. In the great series of air-breathing insects, we have seen that the diverging branch of the myriapods manifests at an early period the prevailing hexapod type, and that all insects are at first apterous, and acquire the jointed legs before the wings are fully developed... It will be found when we enter upon the consideration of the development of the vertebrate embryo, that its unity of organisation with the invertebrata is restricted to as narrow and transitory a point as that of the articulate with the molluscous series... Thus every animal in the course of its development represents some of the permanent forms of animals inferior to itself... (Other forms are represented less exclusively in the development of the animal kingdom, and may be regarded as secondary forms. These are, the polype, the worm, the tunicary, and the lamprey; they are secondary in relation to the animal kingdom at large, but are primary in respect of the primary divisions or provinces. Thus the *Radiata*, after having passed through the monad-stage, enter that of the polype; many there find their final development; others proceed to be metamorphosed into the acellular or the echinoderm. The *Articulata*, at an early stage of their development, assume the form or condition of the apical and acellular worms; some find their mature development at that stage, as the parasitic *Entozoa*; others proceed to acquire annulations, a head, rudimental feet, jointed feet, and finally wings: radiating in various directions and degrees from the primary or fundamental form of their sub-kingdom. The Mollusks pass from the condition of the ciliated monad to that of the shell-less acellular, and in like manner either retain to work out the perfections of that stage, or diverge to achieve the development of shells, of a head, of a pair of fins, of a ventral foot, or of cephalic arms, with all the complexities of organisation which have been demonstrated in the concluding lectures of this course. The vertebrate germ having manifested its monadiform relations by the spontaneous fusion, growth, and multiplication of the primordial nucleated cells, next assumes, by their metamorphosis and primary arrangement, the form and condition of the finless cartilaginous fish, from which fundamental form development radiates in so many and diversified directions and extents, and attains more extraordinary heights of complication and perfection than any of the lower secondary types appear to be susceptible of.—*Owen, Lectures on Comparative Anatomy*, lect. xxiv. concluding summary.

**Development.** *s.* Process by which anything is developed; developmental growth.

A man born without the capacity for external sensations would also be of necessity soulless and mindless, because, though not the single source of all our thoughts and faculties, the senses are yet the necessary condition of their development... Speech is undoubtedly the product of the thinking spirit, but this spirit received the first impulse of development from the impressions of the outer world and the needs of practical life.—*Farrar, Chapters on Language*, ch. v.

(See also extract under preceding entry.)

**Developmental.** *adj.* Connected with, characteristic of, or formed by, development.

As that which is engendered by a mammal in mammalian form from its beginning, each step of its building up has the building of the mammal for its end, and shows it the more as it nears the goal. The developmental phenomena of the head neither supersede nor can supply the better evidences of homology afforded by relative position and connections any more than do those of the foot.—*Owen, Anatomy of Vertebrates*, ch. xxi.

[*Devise*.—Two senses of the word must be distinguished: 1. That of French *devise*, a poem, emblem, conceit, coat, or cognizance borne to distinguish an individual, or a party] (Colgrave); and 2. A contrivance. The first of these is derived from a fashion prevalent in Italy about the 15th century, of wear-

ing suits with the two halves of the body of different colours, by which the retainers of a particular house were distinguished. These uniforms were called *costi* or *panni distinti*, *costi alla divisa*, the colours adopted for the purpose constituting the *partita*, *divisa*, or *devise* of the livery. . . . *Devise* or *devise*, in the sense of arrangement or contrivance, is the Italian *disegno*, to think, imagine; *devise*;

also to appear, to seem unto, and also [to communicate one's thoughts] to discourse. (Florida.) French, *deviner*, to commune, discourse, also to order, direct, dispose of. (Cotgrave.) The origin in the Latin *vincere*, Italian *vino*, what appears to us, view, opinion; to *devine*, to arrange one's thoughts; to *devise* by will, to express the intentions of the testator as to the way in which his property is to go. Under the present head may be explained the expression *point devine*, which has been much misunderstood. The French *deviner* is to imagine, to plan, and *a devine* is used as a superlative of praise.

'Un noble château *a devine*.'

'Li vordiers fut blanc *a devine*.' (ib. iii. 115.)

The garden was fair as could be imagined, or as we say with greater exaggeration, fair beyond imagination.

'—went down in their barges to Greenwich, and every barge as goodly drest as they could *devine*.' (Chron. H. viii. in Cam. Miscell. iv.)

'Els fut portraite *a devine* :—

N'est eueus ni robe ni maistris

Qui mont *deviner* tant bele

En nule terre come cele.

Bien fu fete par grant maistris

Nature la fist *a devine*.'

(Fab. et Contes, iii. 424.)

She was a specimen of the beau ideal; no count, or king, or admiral, could imagine one so fair.

On the other hand *point* is used in the sense of condition; *en bon point*, in good condition; *mettre *a point**, to put into condition, to dress. *A point*, *devine* then would signify, in the condition of ideal excellence, precisely the sense in which *point devine* is always used.

'No noble was he of his stature,

No faire, no julie and so faine,

With limous wrought *at point devine*.'

(R. B. 830.)

Mr. Mitford . . . regards the identification of the Singhalese *devil-bird* as open to doubt; he says, 'The *devil-bird* is not an owl. . . . Its ordinary note is a unguileful clear shout, like that of a human being, and which can be heard at a great distance, and has a fine effect in the silence of the closing night. Dr. Johnson was scarcely at all aware of the authenticity of ancient dialectal words, and therefore seldom gives them any place in his dictionary.—*Pepper, Anecdotes of the English Language.*

[In speaking of dialects this is, probably, the commoner form; though, except as an artificially differentiated word, it has no advantage over Dialectic. A definitely distinct and generally recognized adjective corresponding to (provincial) dialect is one of the desiderata of the English language.]

**Dialectician. s.** Logician.

But aware as I am in common with the great practical dialecticians (Dryden), and, indeed, with every mover in the art of logic, that fallacies often live in universities, I cannot assent to Mr. Burke's observation.—*Dr. Parr, Sequel to the Printed Paper, (Rich).*

**Dialectics. s.** Logic; science of reasoning justly.

Had Baron lived in the present day, I am inclined to think he would have made his chief complaint against unmethodized inquiry and illogical reasoning. Certainly he would not have complained of dialectics as corrupting philosophy. To guard now against the evils prevalent in his time, would be to fortify a tower against battering rams, instead of against cannon.—*Whately, Introductory Lectures on Political Economy, lect. ix.*

**Dialing. s.** Construction of dials.

This hypothesis may be tolerated in physics, as it is not necessary in the arts of dialling or navigation to mention the true system or earth's motion.—*Bishop Berkeley, Siris, § 230.*

**Dialist. s.** Constructor of dials.

Scientific dialists, by the geometrical considerations of lines, have found out rules to mark out the irregular motion of the shadow in all latitudes, and on all planes.—*Mizon.*

**Dialogism. s.** Discussion, or argument, between two or more. *Rare.*

**Diamagnetic. adj.** Connected with, relating to, or consisting in, the opposition of certain bodies under certain conditions to others which comport themselves Magnetically. See extract. (The word, both recent and limited to Physics, has *Diamagnetism* and *Diamagnetism* for its congeners.)

In the paper on 'New Magnetic Actions' it is shown that every substance placed between the poles of a powerful magnet is influenced in one of two ways: it either takes a position coincident with the magnetic forces, as is the case with a bar of iron, and other bodies usually called magnetic; or it places itself at right angles to the line of forces, as is the case with a bar of glass, of bismuth, and, apparently, of every other body: the former of these bodies the author [Faraday] distinguishes as magnetics, the latter as *diamagnetic*, and the respective positions between the poles are termed axial and equatorial; . . . the number of simple magnetisms is very limited; . . . all other bodies are *diamagnetic*, corresponding to bismuth, but with varying intensities.—*Brande, Chemistry, as a notice of a paper by Faraday, in Philosophical Transactions, p. i. p. 258.*

That conjunction or opposition maketh an eclipse which is *diametral*, that is, when the center of the earth and the centers of both the luminaries shall be in the same line, which happeneth to be there only when the moon's eccentric cutteth the sun's in that line, which is therefore called the ecliptick.—*Gregory, Ptolemy, p. 130: 1650.*

2. Opposite; extremely different.

There are gentlemen and male guests, Of several humours, carriage, constitution, Profession too; but so *diametral* One to another, and so much oppos'd, As if I can but hold them altogether, And draw 'em to a surfeits of themselves But till the dissolution of the dinner, I shall have just occasion to believe My wit insatiable.—*J. Johnson, Magnetic Lady.*  
Your own oppositions [are] direct and *diametral* to God and his holy law.—*Archbishop Bancroft, Sermons, p. 74.*

The real leaders of the party, as far as it can be said to have had leaders, were men bred in principles *diametrically* opposed to Toryism, men who had carried Whiggism to the verge of republicanism, and who had long been considered not merely as Low Churchmen, but as more than half Presbyterians. Of these men the most eminent were two great Herefordshire squires, Robert Harley and Paul Foley.—*Macaulay, History of England, ch. 22.*

**Diamond. s.** [Fr. *diamant*; Lat. *adamas*.]

1. Gem so called.

Give me the ring of mine you had at dinner;

Or, for my diamond, the chain you promised;

*Shakespeare, Comedy of Errors, iv. 3.*

The diamond, the most valuable and hardest of all the gems, is, when pure, perfectly clear and pellucid as the purest water; and is eminently distinguished from all other substances by its vivid splendour, and the brightness of its reflections. It is extremely various in shape and size, being found in the greatest quantity very small, and the larger ones extremely seldom met with. The largest ever known is that in the possession of the Great Mogul, which weighs two hundred and seventy-nine carats, and is computed to be worth seven hundred and seventy-nine thousand two hundred and forty-four pounds. The diamond bears the force of the strongest fires, except the concentrated solar rays, without hurt; and even that infinitely fiercest of all fires does it no injury, unless directed to its weaker parts. It bears a glass-house fire for many days, and if taken carefully out and suffered to cool by degrees, is found as bright and beautiful as before; but if taken hastily out, it will sometimes crack, and even split into two or three pieces. The places where we have diamonds are the East Indies and the Brazil; and though they are usually found clear and colourless yet they are sometimes slightly tinged with the colours of the other gems, by the mixture of some metalline particles.—*Sir J. Hill, On Gems.*

The diamond is preferable and vastly superior to all others in lustre and beauty; as also in hardness, which renders it more durable and lasting, and therefore much more valuable than any other stone.—*Woodward, On Gems.*

2. Figure like that of the ace of diamonds in cards.

3. Glazier's tool for cutting glass.

The glazier's diamond is the natural diamond so set that one of its edges is brought to bear on the glass. The extreme point of any diamond will scratch glass, making a white streak; but when the rounded edge of a diamond is slid over a sheet of glass with but slight pressure, it produces a cut which is scarcely visible, and even splits into two or three pieces. Dr. Wallaston succeeded in giving to the ruby, topaz, and rock crystal, forms similar to that of the diamond, and with these he succeeded in cutting glass, proving that this useful property of the diamond depended on its form. . . . The irregular octahedrons with round facets are those proper for glazier's diamonds. . . . Notwithstanding the hardness of the diamond, yet in large glassworks as many as one or two dozens are worn out every week.—*Ure, Dictionary of Arts, Manufactures, and Mines, (Hunt).*

**Diamonded. adj.** In squares like diamonds. Break a stone in the middle, or top a bough of a tree, and one shall behold the earth there, by some secret cause in nature, *diamonded* or streaked in the fashion of a lozenge.—*Pulke, Profane State, p. 364.*

**Diapase. s.** Same as Diapason.

**Diapason.** *s.* [Gr. *δια* = through, and *πάσσω*, gen. pl. fem. of *πάω*.] See last extract. It discovers the true coincidence of sounds into *diapasons*, which is the return of the same sound.—*Bacon*.

Hard din  
Broke the fair musick that all creatures made  
To their great Lord, whose love their motion sway'd  
In perfect *diapason*, whilst they stood  
In first obedience, and their state of good.

Many a sweet rise, many as sweet a fall,  
A full-mouth'd *diapason* swallows all.  
From harmony, from heavenly harmony,  
This universal frame began:  
From harmony to harmony

Through all the compass of the notes it ran,  
The *diapason* closing full in man. —*Spenser*.  
*Diapason* denotes a chord which includes all tones:  
It is the same with that we call an eighth, or an octave; because there are but seven tones or notes,  
and then the eighth is the same again with the first.  
—*Harriar*.

Might in their diverse cunning ever dare  
With this so curious net-work to compare.

*Spenser*.

French *diapré*, variegated, "versicolor indur jaspidis." (DuRoi). In Old English poetry a meadow is frequently spoken of as *diapred* with flowers. At a later period the reference to different colours was lost, and the sense was confined to the figure with which a stuff was ornamented. French *diapré*, d'operé, diversified with flourishes on sundry flour (Cotgrave). As now understood it is applied to linen cloth, woven with a pattern of diamond-shaped figures.—*Wedgwood, Dictionary of English Etymology*.]

Because the outward coat of the eye ought to be pellucid, to transmit the light, which, if the eyes should always stand open, would be apt to grow dry and shrink, and lose their *diaphanēty*; therefore are the eyelids so contrived as often to wink, that so they may, as it were, glaze and varnish them over with the moisture they contain.—*Ray*.

**Diaphanis.** *adj.* [Gr. *δια* = through, and *φανω* = show; nearly the equivalent to the Latin *trans* = across, and *pareo* = appere = appear.] Transparent or translucent: (probably used without the distinction between the two being recognized).

It was a radiant face, one of those that seem as if touched in their cradle by a sun, and to have retained all its brilliancy and unobscured and mantling lustre. One marks sometimes such faces, *diaphanous* with delicate sple dour, in the southern regions of France. Her eye too was the rare eye of Aquitaine; soft and lone, with lashes drooping over the cheek, dark as her clustering ringlets.—*Diarelli the younger, Comingsby*, b. iv. ch. iv.

The transverse section of such teeth gives the appearance of branches of a tree, with leaf-stalks and leaves, radiating from the central pulp-cavity to the circumference of the tooth; and I have called the fossil fish in which this structure was first detected, *Dendrodus*.—*Our Lectures on Comparative Anatomy*, lect. ix.

(For example see extract under *Dimorphism*, 2.) *Dicotyledonous. adj.* In *Botany*. Having two Cotyledons.

Very few of the genera of plants, or even of the families, can be pronounced with certainty to be kinds. The great distinctions of vascular and cellular, *dicotyledonous* or *exogenous* and *monocotyledonous* or *endogenous*, are perhaps differences of kind: the lines of demarcation which divide those classes seem (though even on this I would not pronounce positively) to go through the whole nature of the plants. But the different species of a genus, or genera of a family, usually have in common only a limited number of characters.—*J. S. Mill, System of Logic*.

### Diction. s. [L. Lat.] Dictate. Rare.

The matter is not taxed, and the petition challenged, that we are not involved with you in those same desires, judgments and opinions; will not against the *diction* of our consciousness vote and reverence our own judgments, and expariate them to the sense of others. *Drummond, Zetaphoria*. (Ord MS.)

### Dictament. s. Dictate. Rare.

Such, and not nobler, in the realms above,  
My wonder *dictates* is the dome of Jove. *Pope, Homer's Odyssey*.

The earliest example, given by Dr. Johnson, of this word, *dictate*, is from Pope. It appears among words not familiarly used, in the list of such, at the end of Bagwell's *Mystery of Astronomy*, 1655. —*Yidd*.

What heresies and prodigious opinions have been set on foot, and maintained to the death, under the pretence of the *dictation* and warrant of God's Spirit!—*Bishop Hall, Remains*, p. 138.

### Dictator. s. [Lat.]

Say, that you were the emperor of pleasures,  
The great *dictator* of fashions, for all Europe,  
And had the pomp of all the courts and kingdoms,  
Laid forth unto the slave? to make yourself  
Glad and admir'd at? you must go to bed,  
And take your natural rest: then all this vanishes. *H. Jonson, Staple of News*.

### Dictatorial. adj. After the manner of a dictator; authoritative; confident; dogmatical; overbearing.

### Dictatory. adj. Overbearing; dogmatical.

Our English, the language of men ever famous and foremost in the achievements of liberty, will not easily find servile letters enough to spell such a *dictatory* presumption Englished.—*Milton, Areopagitica*.

### Dictionary. s. Book containing the words of a language in alphabetical order, with explanations of their meaning; lexicon; vocabulary; wordbook.

Some have delivered the polity of spirits, and left an account that they stand in awe of charms, spells, and conjurations; that they are afraid of letters and characters, notes, and dashes, which, set together, do signify nothing; and not only in the *dictionary* of man, but in the subtle vocabulary of Satan. —*Sir T. Browne, Vulgar Errors*.

Is it such a fault to translate similes images? I seek in what a good thing it is to have a good catholic *dictionary*.—*Bishop Stillingfleet*.

An army, or a parliament, is a collection of men; *etymology*, or nomenclature, is a collection of words. *Watts*.

### Used adjectively. As found or given in a dictionary, or in dictionaries generally.

None of the modes of assuming what should be proved are in more frequent use than what are termed by Bentham, 'question-begging appellatives'; names which beg the question under the guise of stating it. The most potent of these are such as have a laudatory or vituperative character. For instance, in politics, the word *innovation*. The *dictionary* meaning of this term being merely 'a change to something new', it is difficult for the defenders even of the most salutary improvement to deny that it is an innovation; yet the word having acquired in common usage a vituperative connotation in addition to its *dictionary* meaning, the admission is always construed as a large concession to the disadvantage of the thing proposed.—*J. S. Mill, System of Logic*, v. 7.

### Dictum. s. pl. dicta. [Lat. neuter of *dictus* = thing said. — see *Dictation*.] Apophthegm.

The maxim resulting from the examination of a syllogism in the foregoing form, and of the application of which, every valid argument is in reality an instance, is, 'that whatever is predicated (i.e. affirmed or denied) universally, of any class of objects, may be predicated, in like manner, (viz. affirmed or denied) of any thing comprehended in that class.' This is the principle, commonly called the 'dictum do omni et nullo', for the indication of which we are indebted to Aristotle, and which is the keystone of his whole logical system. . . . The object of Aristotle's *dictum* is precisely analogous; . . . his design was to point out the general principle on which that process is conducted which takes place in each syllogism. And as the laws of nature (as they are called) are in reality merely generalized facts, of which all the phenomena coming under them are particular instances; so, the proof drawn from Aristotle's *dictum* is not a distinct demonstration brought to confirm another demonstration, but is merely a generalized and abstract statement of all demonstration whatever; and is, therefore, in fact, the very demonstration which (mutatis mutandis) is accommodated to the various subject-matters, is actually employed in each particular case. Some persons have remarked of the *dictum* (meaning it as a disparagement) that it is merely a somewhat circuitous explanation of what is meant by a class. It is, in truth, just such an explanation of this as is needful to the student, and which must be kept before his mind in reasoning.—*Whately, Elements of Logic*, h. i. § 4.

For example: in questions of language, the use of the greater number is practically the standard of decision, according to the well-known *dictum* of Horace, in order that a person should be intelligible, it is necessary that he should conform to the grammatical forms and significations of words generally recognized by those whom he addresses. —*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vi.

**Didactic.** *adj.* [Gr. *διδασκός*, from root of *διδάσκω* = teach; *διδασκαλία* = teaching.] Teaching; preceptive; conveying instruction.

Plants with imperfect, *diaceous*, or unisexual flowers are (a) staminate, or sterile, with stamens and no pistils; (b) pistillate, or female, with pistils and no stamens; (c) neuter, without essential organs. Here the systemist finds the self-sufficing combination of fertilizing and productive organs in the same individual, as in most flowers. —*Owen, Lectures on Comparative Anatomy*.

Spare Past, that oft with gods doth diet. —*Milton, Il Penseroso*.

**Diet.** *s.* [Fr. *diette*; L.Lat. *dieta*, *dieta*, from *dies* = day; the original import of the word being the day fixed for some meeting, judicial or political, rather than the meeting itself.] Assembly, more especially of estates in the political sense of the term, either within the Germanic empire itself or in the countries influenced by it; German, also Polish, parliament.

An emperor in title without territory, who can ordain nothing of importance but by a diet, or assembly of the states of many free princes, ecclesiastical and temporal. —*Sir W. Raleigh*.  
And save debates in Warsaw's diet,  
He reigned in most unseemly quiet. —*Byron, Mazeppa*.

A diet at Aix-la-Chapelle was among the earliest acts of Louis the Pious. From this council commissioners were despatched throughout the empire to receive complaints and to redress all acts of oppression. . . . Louis the Pious held his plenary court a second time at Aix-la-Chapelle. The four great acts of this council were among the boldest and most comprehensive ever submitted to a great national assembly. The emperor was still in theory the sole legislator; not only were the secret suggestions, but the initiatory motions in the council, from the supreme power. It might seem, that in the three acts which regarded the hierarchy, the emperor legislated for the church; but it was in truth the church legislating for herself through the emperor. . . . The Council Diet of Aix-la-Chapelle, having thus legislated for the church, contemplated the dangers of the state. —*Milman, History of Latin Christendom*, v. ch. ii.

On such liberal principles, the diet constituted that the most ignorant class in the province ignorant to such an extent that it does not even look upon reading and writing as necessary qualifications in its deputies elects 72 members, while the nobles—that is to say, all the old landed proprietors, great and small, have only 42 representatives, the townspeople only 22. The Universities of Cracow and Lemberg are represented through their rectors, who sit ex officio; the chambers of commerce of Lemberg, Cracow, and Brody send one member each to the diet, who is elected. But as the influence of the landed proprietors and citizens is neutralized by that of the peasants, so is that of the educational and commercial bodies by a formidable clerical party consisting of three archbishops (one Roman Catholic, one United Greek, and one Armenian), and four bishops (three Roman Catholic, and one United Greek). With the intelligence, patriotism, and property of the country on the one side, but with the priests and peasants on the other, the government, putting its faith in numbers calculated and carefully balanced beforehand, does not find the Galician diet such a troublesome body as might have been expected. —*S. Edwards, Polish Captivity*, vol. ii. ch. iii.

**Differ. v. n.** [Lat. *differe*.]

1. Be distinguished from, or have properties and qualities not the same with, those of another person or thing: (with *from*).

Thy prejudices, Syphilis, woe't discern  
What virtues grow from ignorance and ch—  
Nor how the hero differs from the brute. *Addison, Cato.*

2. Contend; be at variance.

A man of judgement shall sometimes hear ignorant men differ, and know well within himself that those which so differ mean one thing, and yet they themselves never agree. — *Bacon.*

3. Be of a contrary opinion: (in conversation at least, the construction with *with*, though less logical, is commoner than that with *from*; such sentences as 'I differ with you' being more usual than 'I differ from you').

**Differ. v. a.** Make different. *Rare.*

In thy immortal part  
Man, as well as I, thou art;  
But something 'tis that differs thee and me. *Cowley.*

**Difference. s.**

1. State of being distinct from something; contrariety to identity.

Where the faith of the holy church is one, a difference between customs of the church doth no harm. — *Moorer, Ecclesiastical Policy.*

2. Quality by which one differs from another. This nobility, or difference from the vulgar, was not in the beginning given to the succession of blood, but to the succession of virtue. — *Sir W. Raleigh.*

3. Dispute; debate; quarrel; question; controversy.

What was the difference? — It was a contention in public. — *Shakespeare, Cymbeline, l. 5.*

4. Distinction: (with *between*).

Our constitution does not only make a difference between the guilty and the innocent, but even among the guilty, between such as are more or less criminal. — *Addison, Freucholder.*

In Logic this is often interchanged with the Latin form *differentia*.

Of these predicable, genus and species are commonly said, in the language of logicians, to be predicated 'in quid'; i. e. to answer to the question, 'what?' as, 'what is Caesar?' Answer, 'a man'; 'what is a man?' Answer, 'an animal'; difference 'in quid quid'... It is evident from what has been said, that the genus and difference put together make up the species. E. g. 'rational' and 'animal' constitute 'man'... But when logicians speak of species as a 'whole', this is, properly, in reference to the genus and the difference; each of which denotes a 'part' of that species which we constitute by joining those two together. But then it should be remembered that a species is not a predicable in respect of its genus and difference (since it cannot be predicated of them), but only in respect of the individuals, or lower species, of which it can be predicated.

... When I say of a magnet, that it is 'a kind of iron-ore,' that is called its proximum-genus, because it is the closest (or lowest) genus that is predicated of it: 'mineral' is its more remote genus. When I say that the difference of a magnet is its 'attracting iron,' and that its property is 'polarity,' these are called respectively a specific difference and property; because magnet is (I have supposed) an infinite species (i. e. only a species). When I say that the difference of iron ore is its 'containing iron,' and its property, 'being attracted by the magnet,' these are called respectively, a generic difference and property, because 'iron-ore' is a subaltern species or genus; being both the genus of magnet, and a species of mineral. ... An individual is so called because it is incapable of logical division; which is a metaphorical expression, to signify 'the distinct (i. e. separate) enumeration of several things signified by one common name.' This operation is directly opposite to generalization, (which is performed by means of 'abstraction'); for as, in that, you set aside the differences by which several things are distinguished, so now to call them all by one common name, so, in division, you select the differences, so as to enumerate them by their several distinct names. Thus, 'mineral' is said to be divided into 'earths, metals, &c.; and metals again into 'gold, iron, &c.; and these are called the parts (or members) of the division. ... You may say of a beast or bird that it is an 'animal,' and the term 'beast' implies not only the term 'animal,' but something more besides; namely, whatever 'difference' characterizes 'beast,' and separates it from 'bird,' 'fish,' &c. *Whately, Elements of Logic, supplement to chap. i. § 3, 4, 5.*

In the plural. Evidence of distinction; differential mark.

Henry had the title of sovereign, yet did not put those things in execution which are the true marks and differences of sovereignty. — *Sir J. Davies.*

6. In Heraldry. Figure added to coats of arms to distinguish one family from another, and to show how far distant younger branches are from the principal branch.

The original of difference is controverted. Camden will have them to have begun about the time of Richard I. Paradin assigns difference worn as early as the year 570. The president Pauchet observes differences to have been hereditary in the French families before the time of Louis le Gros, who came to the crown in the year 1110. Moreau refers them to the time of St. Louis and Lailonette, Belleforest, &c., to that of Philip Augustus. — *Rea, Cyclopaedia, Difference.*

7. Distinct kind, variety, or species. *Rare.*

This is notoriously known in some differences of brake or fern. — *Sir T. Browne, Vulgar Errors.*

8. In Mathematics. Excess of one quantity above another.

**Difference. r. a.** Cause a difference; make one thing not the same as another. Differentiate the commoner word.

You know it in common practice in your trades and merchandise, that when a man hath bought a parcel of commodities he sets his mark upon them, to distinguish them from the rest in the warehouse; so doth our God; he sets a mark upon his own; whereby they are plainly differentiated from others. — *Bishop Hall, Kemniss, p. 131.*

In the Saxon Angles, colloquial language is left at the greatest distance, of searching of it is preserved, to render the dialogue probable; in Minster the style is *differeat*, but *different* in the southernst degree possible, from animated conversation by the vein of poetry. — *Coleridge, Todd, Talk.*

**Different. adj.**

1. Distinct; not the same.

There are covered galleries that lead from the palace to five different churches. — *Addison, Travels in Italy.*

And other chumers, where different food and soil  
Portend distempers. *Philips.*

3. Unlike; dissimilar.

Happiness consists in things which produce pleasure, and in the absence of those which cause any pain; now these, to different men, are very different things. — *Locke.*

**Differential. adj.**

1. Relating to, consisting in, or indicating, difference: (almost always with some specific application; generally in connection with *differentia*, in the logical sense of that term).

a. In Mathematics. To the calculus of infinitesimals, or the differential calculus.

Differential method is applied to the doctrine of infinitesimals, or infinitely small quantities, called the arithmetic of fluxions. It consists in descending from whole quantities to their infinitely small differences, and comparing together those infinitely small differences, of what kind soever they be; and from thence it takes the name of the differential calculus, or analysis of infinitesimals. — *Harris.*

b. In Commerce. To duties of a compensatory character.

Up to that year (1860) there existed a differential import duty on foreign paper, which had been imposed to counter-bail the export duties levied by almost every foreign government on raw—the raw material of the manufacture. One of the stipulations in the commercial treaty was that this duty should be removed, but by an unhappy oversight on the part of the negotiators of the treaty no attempt was made to secure the simultaneous abolition of the export duty on foreign raw. The consequence of the abolition of the import duty while the export duty on the raw material was retained could be easily foreseen, and it was in fact predicted. A great trade had grown up under the differential duty. The duty was suddenly withdrawn. The consumer would get his commodity cheaper, but the producer must work at lower profits and possibly be driven out of the market. — *Times, May 21, 1862.*

2. In Meteorology. See extract.

This instrument [the differential thermometer] consists of a glass tube bent twice at right angles, so that the balls blown as near as possible of the same size at its extremities, are on a plane with the instrument, and perpendicular to the stand on which it rests. The tube and part of a ball are filled with a coloured fluid, and the rest contains air. It is termed differential because its use is to distinguish between the temperatures of the balls: when one of these is affected by caloric, the expanded air depresses the fluid on that side and raises it on the other—the comparison therefore is between the aerial fluids in the separate bulbs of the instrument. — *Thompson, Introduction to Meteorology, § 117.*

**Differentially. adv.** In a differential manner; in the way of differentiation.

Whether, as some contend, everything is explicable on the hypothesis of universal pressure, whence what we call tension results differentially from inequalities of pressure in opposite directions; or whether, as might be with equal propriety contended, there are to be explained on the hypothesis of universal tension, from which pressure is a differential result; or whether, as most physicians hold, pressure and tension everywhere co-exist: are questions which it is impossible to settle. — *Herbert Spencer, First Principles, ch. 2.*

**Differentiate. v. a.** Effect a differentia, or difference, in its logical sense, i. e. as a point of classification: (its chief special applications being in Biology, where it denotes the changes which result in the development of differential characters). As the process, being one of growth, is less noticed than the result, the *participial* or *adjectival* form is commoner than that of the ordinary verb.

Cypripedium, in having three stigmas developed, and therefore in not having a rostellum, in having two fertile anthers with a large rudiment of a third, and in the state of its pollen, seems a remnant of the order whilst in a simpler condition. ... These broken groups do not indicate to us the structure of the common parent-form of all orchids, but they probably serve to show the state of the order in ancient times, when none of the forms had become so widely differentiated from each other and from other plants, as are the existing orchids, especially the Vandoe and the Ophrys; and when, consequently, the order made a nearer approach in all its characters, than at present, to such allied groups as the Marantaceae. *Darwin, Fertilization of Orchids, ch. vii.*

**Differentiation. s.** Determination by means of a change producing a differential character or logical differentia; state so produced.

The first distinction we noted between the kind of change shown in life, and other kinds of change, was its serial character: we saw that vital change is substantially unlike non-vital change, in being made up of successive changes. Now since organic bodies display in so much higher a degree than inorganic bodies, those continuous differentiations and integrations which constitute evolution, ... it is clear that in a given time, organic bodies must undergo changes so comparatively numerous as to render the successiveness of their changes a marked characteristic. ... We reached the conclusion, that a force falling on any aggregate is divided into se-

## DIFFERENTLY } DIFF

veral forces; that when the aggregate consists of parts that are unlike, each part becomes a centre of unlike differentiations of the incident force; and that thus the multiplicity of such differentiations must increase with the multiplicity of the unlike parts.—*Herbert Spencer, Data of Biology*, § 36. (See also examples under Integration.)

**Differently, adv.** In a different manner.

He may consider how *differently* he is affected by the same thought, which presents itself in a great writer, from what he is when he finds it delivered by an ordinary genius.—*Addison*.

Hope oft' fancies that to be facile in the attainment, which reason in the event shows *difficile*: so as prudence we see is of force, where force prevails not.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 38.

That that should give motion to an unwieldy bulk, which itself hath neither bulk nor motion, of as *difficile* apprehension as any mystery in nature. *Glauville, Scipia Scientifica*.

**Difficileness, s.** Attribute suggested by Difficile; incompliance; impracticability. *Rare*.

There be that in their nature do not affect the good of others: the light sort of humanity turneth but to a civility, or friendliness, or aptness to please, or *difficileness*, or the like; but the deeper sort, to envy and mere mischief.—*Bacon, Essay of Goodness*.

**Difficult, adj.** Hard; not easy; not facile.

If it be *difficult* in the margin in the eyes of this people.—*Zachariah*, viii. 8.

The late lord chancellor Thurlow was fond of using the verb *difficult*, as, he *difficult* the matter; but he was pronounced unjustifiable in this usage. The old French verb, we see, misleads him; and the old English offers a synonyme.—*Codgrave and Sherwood*.

**Difficultly, adv.** In a difficult manner; hardly; not easily.

A man who has always indulged himself in the full enjoyment of his station, will *difficultly* be persuaded to think any methods unjust that offer to continue it. *Bayers, Nervous*.

## 1. Hardness; contrariety to easiness or facility; anything hard to accomplish.

The religion which, by this covenant, we engage ourselves to observe, is a work of labour and *difficultly*; a service that requires our greatest care and attention.—*Boyle*.

They mistake *difficulties* for impossibilities: a pernicious mistake certainly; and the more pernicious, for that men are seldom convinced of it, till their convictions do them no good. *South, Sermons*.

## With under.

They lie *under* some *difficulties*, by reason of the emperor's displeasure, who has forbidden their manufactures.—*Addison, Tracels in Italy*.

## 2. Objection; cavil.

Men should consider, that raising *difficulties* concerning the mysteries in religion, cannot make them more wise, learned, or virtuous.—*Swift*.

## In difficulties. Embarrassed; (mostly from an urgent need of money).

**Diffide, v. n.** [Lat. *diffidat*.] Distrust; have no confidence in. *Rare*.

To introuit true light.

The man *diffides* in his own augury,  
And doubts the gods.

*Dryden*.

**Diffidence, s.**

## 1. Distrust; want of confidence in others.

No man almost thought himself secure, and men durst scarce commune or talk one with another; but there was a general *diffidence* every where.—*Bacon, History of the Reign of Henry VII.*

You have brought scandal  
To Israel, *diffidence* of God and doubt  
In feeble hearts. *Milton, Samson Agonistes*, 423.

## 2. Doubt; want of confidence in ourselves.

If the evidence of its being, or that this is its true sense, be only on probable proofs, our assent can reach no higher than an assurance or *diffidence*, arising from the more or less apparent probability of the proofs.—*Locke*.

Be silent always, when you doubt your sense;  
And speak, though sure, with seeming *diffidence*.

*Pope*.

**Diffident, adj.**

## 1. Distrustful; doubting others.

*Diffidence* makes the humble heart *diffident*.—*Charnock*.

**Diffidently, adv.** In a diffident manner.

In man humility's alone sublime,  
Who *diffidently* hopes he's Christ's own care.  
*Smart, Hymn to the Supreme Being*.

**Diffinitive, adj.** [Lat. *diffinitivus*.] Final; conclusive; determinate: (different from, though liable to be confounded with, Definitive).

The tribunal where we speak being not *diffinitive* (which is no small advantage) I now promised to ease his memory myself with an extract of what I had said. *Sir H. Wotton, Reliquia Wottoniana*, p. 237.

**Diffusency, s.** [Lat. *diffusentia*—flowing off in different directions.] Quality of falling away on all sides; effect of fluidity, as opposed to consistency. *Rare*.

Ice is water congealed by the frigidty of the air, whereby it acquirith no new form; but rather a consistency or determination of its *diffusency*.—*Sir T. Browne, Vulgar Errors*.

**Difform, adj.** [Lat. *difformis*.] Having parts of different structures; dissimilar; unlike; irregular: (opposed to uniform).

The unequal refractions of *difform* rays proceed not from any contingent irregularities; such as are veins, an uneven polish, or fortuitous position of the pieces of glass. *Sir I. Newton*.

**Difformity, s.** Diversity of form; irregularity; dissimilitude.

In respect of uniformity with the primitive church, as of *difformity*.—*Stapleton, Portraits of the Faith which Protestants call Papistry*, fol. 138 b: 1565.

There must [thus] needs be infinite *difformity* in the public worship; and all the benefits which were, before, the consequences of conformity and unity, will be lost. —*Jeremy Taylor, Discourses on extempore Prayer*.

Necessity, absolute in itself, is simple and uniform and universal, without any possible difference, *difformity*, or variety whatsoever.—*Clarke, Demonstration of the Being and Attributes of God*, § 7.

**Diffuse, Adj.** [Lat. *diffusus*, pass. part. of *diffundo*—pour, or spread by pouring, in different directions.]

The reasoning of them is sophistical and inconclusive; the style *diffuse* and verbose.—*J. Warton, Essay on Pope*.

## 2. Difficult; tedious.

John Lydgate  
Wroth after an higher rate;  
It is *diffuse* to fynde  
The sentence of his mind. *Shelton, Poems*, p. 237.

## DIFF

**Diffuse, v. a.** [Lat. *diffusus*—poured out so as to spread in different directions.]

## 1. Pour out upon a plane, so that the liquor may run every way; pour without particular direction.

When these waters began to rise at first, long before they could swell to the height of the mountains, they would *diffuse* themselves every way.—*T. Burnet, Theory of the Earth*.

## 2. Spread; scatter; disperse.

That iron man  
With his huge sail began to lay about;  
From whose stern prowance they *diffused* ran,  
Like scatter'd chaff, the which the wind away doth fan.  
*Spenser, Faerie Queene*, v. 11, 47.

**Diffused, part. adj.**

## 1. Extended; at full length.

See how he lies at random, *carelessly diffused*,  
With languish'd head unprop'd.

*Milton, Samson Agonistes*, 118.

With some *diffused* song.  
*Shakespeare, Merry Wives of Windsor*, iv. 4.

He grows like savages,  
To swearing and stern looks, *diffused* attire,  
And everything that seems unmanly.

*Id., Henry V*, v. 2.

**Diffuseness, s.** Attribute suggested by Diffuse.

Though his works are voluminous, Cujacius has not the reputation of *diffuseness*; on the contrary, the art of lucid explanation with brevity is said to have been one of his great characteristics. *Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. iv. s. 3, § 74.

**Diffuser, s.** One who diffuses.

If the Jews were such *diffusers* of secular learning, why are the wisest men of their own nation, such as Joseph, Moses, Solomon, and David, characterized and deciphered to us in the Bible with a comparison so advantageous to the wisdom of other nations; as, that they were skilled in all the wisdom of the Egyptians, that their wisdom excelled all the wisdom of the east countries and of Babylon?—*Manningham, Discourses*, p. 23: 1681.

**Diffusibility, s.** Capability of being diffused; readiness to diffuse itself.

(For example see extract under next entry.)

**Diffusible, adj.** Capable of diffusion.

But the fact of chief interest to us here, is that the relatively small-atomed crystalloids have immensely greater diffusive power than the relatively large-atomed colloids. Among the crystalloids themselves, there are marked differences of *diffusibility*; and among the colloids themselves, there are parallel differences, though less marked ones. But these differences are small compared with that between the *diffusibility* of the crystalloids as a class, and the *diffusibility* of the colloids as a class. Hydrochloric acid is seven times as *diffusible* as sulphuric acid; but it is fifty times as *diffusible* as albumen, and a hundred times as *diffusible* as casein. These differences of *diffusibility* manifest themselves with nearly equal distinctness, when a permeable septum is placed between the solution and the water. And the result is, that when a solution contains substances of different *diffusibilities*, the process of *diffusion*, as Professor Graham calls it, becomes a means of separating the mixed substances; especially when such mixed substances are partly crystalloids and partly colloids.—*Herbert Spencer, Data of Biology*.

**Diffusion, s.** Dispersion; state of being scattered every way.

Whereas all bodies act either by the communication of their nature, or by the impressions and signatures of their motions, the *diffusion* of species visible enough to participate more of the former operation, and the species audible of the latter.—*Bacon, Natural and Experimental History*.

**Diffusive, adj.**

## 1. Having the quality of scattering anything every way.

*Diffusive* of themselves, where'er they pass  
They make that warmth in others they expect:  
Their valour works like bodies on a glass,  
And draw its image on their men project. *Dryden*.

## 2. Scattered; dispersed; having the quality of suffering diffusion.

All liquid bodies are *diffusive*; for their parts being in motion, have no cohesion, but glide and fall off any way. —*T. Burnet, Theory of the Earth*.

**Diffusively, adv.** In a diffusive manner; widely; extensively; every way.

\**Kakaporia* . . . means *diffusively* the whole community of the Christian name.—*Bentley, Philoanthropus Epitoniensis*.

**Diffusiveness, s.** Attribute suggested by Diffusive.

# 1. Extension; dispersion; power of diffusing; state of being diffused.

The reflection of this quality upon us should be our *diffusiveness*; that we should be as lights, as that we should give light; so have light in ourselves, that we should give it unto others.—*Bishop Hall, Remains*, p. 43.

The most obvious and most general notion of this catholicism consisteth in the *diffusiveness* of the church.—*Bishop Pearson, Exposition of the Creed*, art. ix.

# 2. Want of consciousness; large compass of expression.

The fault that I find with a modern legend, in its *diffusiveness*; you have sometimes the whole side of a medal covered with it.—*Addison, Dialogues on the Usefulness of ancient Medals*.

# Dig. v. a. Pierce with a spade; form, or obtain, by digging.

It is *digged* out of even the highest mountains, and all parts of the earth continually; as the pyrites.—*Woodward*.

Nor was the ground alone requir'd to bear  
Her annual income to the crooked share;  
But greedy mortals, rummaging her store,  
Dig'd from her entrails first the precious ore.

*Dryden, Translation from Ovid.*

With up.

If I *dig'd* up thy forefathers' graves,  
And hung their rotten coffins up in chains,  
It would not shake mine ire.

*Shakespeare, Henry VI. Part III. l. 3.*

# Dig. v. n. Work with a spade; work in making holes, or turning the ground.

They long for death, but it cometh not; and *dig* for it more than for hid treasures.—*Job*, iii. 21.

Then said he unto me, Man, *dig* now in the wall; and when I had *digged* in the wall, I beheld a door.—*Ezekiel*, viii. 8.

The Italians have often *dag* into lands described in old authors, as the places where statues or obelisks stood, and seldom failed of success.—*Addison, Travels in Italy*.

# Dig. s. Thrust; poke; (as, 'a dig with a sword'; 'a dig in the ribs'). Colloquial.

# Digamist. s. One who marries a second wife after the death of the first; deutrogamist. See Bigamist, for which it has been sometimes used.

And for the ordinary digamy, the marrying a second time after the decease of the former, that that should be so reproachable or blameworthy in any, as to render one incapable of holy orders (which they are capable of, which have been guilty of some faults), this is not imputable neither. . . . Then for the other interpretation, that here the *digamist*, or he that hath had two wives successively, one after another, should be made incapable of holy orders, or be under reproach for so doing, &c.—*Hammond, Works*, vol. viii. p. 597. (Rich.)

# Digamma. s. [Gr.] Double gamma: (the equivalent in form, place, origin, and perhaps in power, to *tau*, the sixth letter in the alphabet from which the early Greek characters were derived; of these the digamma formed one, but was afterwards ejected).

Towering o'er your alphabet, like Saul,  
Stands our digamma, and o'erlops them all.

*Pope, Dunciad.*

From this use of the gamma probably came the *digamma*, which from its form, as well as its name, seems to have been composed of two gammas placed one upon another. . . . The *digamma* was certainly pronounced rather as a simple aspirate than as an aspirated consonant. . . . It is generally supposed among the learned at present, that the *digamma* was sounded like our W. . . . The *Alto* dialect, we know, had more guttural sounds than any other, and more particularly employed the *digamma*, which is thence called *Alto* by the later grammarians.—*R. Payne Knight, Analytical Essay on the Greek Alphabet*, p. 12: 1791.

It has been a common assertion, that the old Greek alphabet consisted of only sixteen letters. But Piny and Plutarch seem, in the first place, to be the sole authority for the statement. . . . In defence of  $\Omega$ ,  $\Phi$ ,  $\chi$ , we say nothing; but the character  $\Psi$  certainly did exist, not indeed as a long vowel, but as an aspirate. Thus with the *digamma*, the letter  $\Pi$  (*chith*), and the *theta*, the old alphabet possessed a complete trio of aspirates; no erroneous is the notion that they should all be excluded.—*Key, Alphabet, Trrentian Metres*, &c.

# Digamy. s. [Gr. *dygamin*.] Second marriage; marriage to a second wife after the death of the first; deutrogamy. S Bigamy, for which it has been sometimes used.

They parallel the antick Romans, who (as Tacitus,

Marcellin, and Tertullian tell us) as hated *digamy* (both in enjoying two wives at one time, and being twice married) as no holocaust was ever offered, no holy fire burnt unto by such, nor such as issued from such parents.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 46.

Dr. Champny only proves, that archbishop Cranmer was twice married; which is not denied; but brings nothing to prove that such *digamy* or *digamy* rather deprives a bishop of the lawful use of his power of ordaining.—*Bishop Ferne*.

# Digestio. adj. [Gr. *digē*=double, *gastri*=belly.] Applied to a muscle of the lower jaw, having, as it were, a double belly.

A certain muscle, called the *digestrick*, rises on the side of the face.—*Paley, Natural Theology*, p. 142.

# Digest. s. Thing digested; (with reference to the systematic embodiment and exhibition of a mass of detail previously unarranged, more especially to *laws*). For *The Digest*, which is a *proper* rather than a common name, see Pandect, and extract from Gibbon.

I had a purpose to make a particular *digest*, or recompilment to the laws of mine own nation.—*Bacon*.

Laws in the *Digest* show that the Romans applied themselves to trade.—*Arbuthnot, Tables of ancient Coins, Weights, and Measures*.

If they had obeyed his commands in ten years, Justinian would have been satisfied with their diligence, and the rapid composition of the *Digest*, or *Decretes*, in three years, will deserve praise or censure according to the merit of the execution. . . . The (general receiver) is a common title of the Greek miscellanies. The *Digest* of the Senevols, Marcellinus, Celsus, were scarcely familiar to the civilians. But Justinian was wroth, when he chose the two appellations as synonymous. *Gibbon, Decline and Fall of the Roman Empire*, ch. xlv. and note.

# Digest. v. a. [Lat. *digestus*, pass. part. of *digero*.]

# 1. Distribute into various classes or repositories; range or dispose methodically.

When that I heard where Richmond did arrive,  
I did *digest* my hands in battell-may.

*Mirror for Magistrates*, p. 763.

Each then has organs to *digest* his food:  
One to beget, and one receive the brood.

*Prior*.

# Used metaphorically.

If little faults, proceeding on distemper,  
Shall not be wink'd at, how shall we stretch our eye,  
When capital crimes, chew'd, swallow'd, and *digested*,  
Appear?

*Shakespeare, Henry V. li. 2.*

# 3. In Chemistry. Act upon anything by maceration and partial solution in such a manner as to imitate the digestive operation of the stomach.

# 4. Range methodically in the mind; apply knowledge by meditation to its proper use.

Blessed Lord, who hast caused all holy scriptures to be written for our learning; grant that we may in such wise hear them, read, mark, learn, and inwardly *digest* them, that by patience and comfort of thy holy word we may embrace, and ever hold fast, the blessed hope of everlasting life, which thou hast given us in our Saviour Jesus Christ. *Book of Common Prayer, Collect for second Sunday in Advent*.

# 5. Reduce to any plan, scheme, or method.

My words and deeds they daily wrest,  
And in their thoughts my fall *digest*.

*St. Paulus, Paulus*, p. 84.

# 6. Receive without loathing or repugnance; not to reject.

First, let us go to dinner.—  
Nay, let me praise you while I have a stomach.—  
No, pray thee, let it serve for table-talk;  
Then howsoever thou speak'st, among other things  
I shall *digest* it.

*Shakespeare, Merchant of Venice*, iii. 5.

# 7. Receive and enjoy.

Cornwall and Albany,  
With my two daughters' dowries, *digest* the third.  
*Shakespeare, King Lear*, i. 1.

# Digestedly. adv. In a digested manner; after the manner of things digested; methodically. Rare.

Thus, we doo but talk with our friends by our pen, and express ourselves no whit less easily, somewhat more *digestedly*.—*Bishop Hall, Dedication to Spenser* (Ord MS.)

Not in a slight and perfunctory manner, but studiously and *digestedly*.—*Life of Meade, Preface to his Works*, p. xxxix.

# Digester. s.

# 1. That which digests; one who digests or concocts his food.

People that are bilious and fat, rather than lean, are great eaters and ill *digesters*.—*Arbuthnot*.

# 2. That which causes or strengthens the coactive power.

Rice is of excellent use for all illnesses of the stomach, a great restorer of health, and a great *digester*.—*Sir W. Temple*.

# 3. Vessel capable of boiling substances at a temperature above 212° Fahr., used in the preparation of soups, and especially in the extraction of gelatine from bones. See extract.

The *digester* is an instrument invented by M. Papin about the beginning of the last century. It is a strong vessel of copper or iron, with a cover adapted to screw on with a piece of felt or paper interposed. A valve with a small aperture is made in the cover, the stopper of which valve may be more or less loaded either by actual weights or by pressure from an apparatus on the principle of the sphygmometer. The purpose of this vessel is to prevent the loss of heat by evaporation. The solvent power of water when heated in this vessel is greatly increased.—*Enc. Dictionary of Chemistry*.

# Digestibility. s. Capability of being digested.

The flesh of adult animals is, at present, considered as preferable, in point of *digestibility*, to that of young ones, because experiments on the gastric juice have shown the former to be more readily dissolved in this liquid. *Chayne, Natural Method of curing the Diseases of the Body*. (Ord MS.)

# Digestible. adj. Capable of being, or liable to be, digested.

These medicines that purge by stool are, at the first, not *digestible* by the stomach, and therefore move immediately downwards to the guts.—*Bacon, Natural and Experimental History*.

# Digestion. s.

# 1. Act of digesting or concocting food in the stomach; power of doing so, in which sense it is nearly equivalent to stomach.

Now good digestion wait on appetite,  
And health on both. *Shakespeare, Macbeth*, iii. 4.  
*Digestion* is a fermentation begun, because there are all the requisites of such a fermentation: heat, air, and motion; but it is not a complete fermentation, because that requires a greater time than the continuance of the aliment in the stomach; vegetable putrefaction resembles very much animal *digestion*.—*Arbuthnot, On the Nature and Choice of Aliments*.

Quantity of food cannot be determined by measures and weights, or any general Lesson rules; but must vary with the vigour or decay of age or of health, and the use or disuse of air or of exercise, with the changes of appetite; and then, by what every man may find or suspect of the present strength or weakness of *digestion*. *Sir W. Temple*.

Every morsel to a satisfied hunger, is only a new labour to a tired *digestion*.—*South, Sermon*.

The briefest consideration of the many continuous actions constituting the life of the body at large, suffices to show that they are synchronous—that *digestion*, circulation, respiration, excretion, secretion, &c., in all the many subdivisions, are going on at one time, in mutual dependence.—*H. Spencer, Laws of Biology*.

# 2. In Chemistry. Preparation by slow soaking and moderate heat.

We conceive, indeed, that a perfect good concoction, or *digestion*, or maturation of some metals, will produce gold.—*Bacon, Natural and Experimental History*.

# 3. Reduction to a plan; maturation of a design.

The *digestion* of the counsels in Sweden is made in senate, consisting of forty counsellors who are generally the greatest men.—*Sir W. Temple*.

# 4. In Medicine. Disposition of a wound or sore to generate matter; maturation.

The first stage of healing, or the discharge of matter, is by surgeons called *digestion*.—*Sharp, Surgery*.

# Digestive. adj.

# 1. Having the power to cause digestion, or to strengthen the stomach.

A chylifactory menstruum, or a *digestive* preparation, drawn from species or individuals, whose stomachs peculiarly dissolve lapidulous bodies.—*Sir T. Brown, Vulgar Errors*.

It, again, leaving those lowest animal forms revealed by the microscope, . . . we pass to those somewhat higher and larger forms which possess a digestive cavity. . . . we see in them a correspondence between certain actions in the digestive sac,

and the properties of certain surrounding bodies. That a creature of this order may continue to live, it is, on the one hand, necessary, that there be available substances in the environment capable of transformation into its own tissue; and on the other hand it is necessary that the introduction of these substances into the digestive sac, shall be followed by the secretion of a solvent fluid capable of reducing them into a fit state for absorption.—*Herbert Spencer*.

2. Capable by heat of softening and subduing. The earth and sun were in that very state; the one active, piercing, and digestive by its heat; the other passive, receptive, and stored with materials for such a production.—*Sir Matthew Hale*.

3. Methodizing; adjusting. To business, ripen'd by digestive thought, This future rule is into method brought.—*Dryden*.

**Digestive. s.** Application which disposes a wound to generate matter. I dressed it with digestive.—*Wismar, Surgery*.

**Digesture. s.** Digestion. *Obsolete*. Neither the yourself always to eat meats of easy digesture; such as veal, sweetbread.—*Harey*.

**Digger. s.** One who digs. When we visited mines, we have been told by diggers, that even when the sky seemed clear, there would suddenly arise a steam so thick, that it would put out their candles.—*Boyle*.

**Digging. verbal abs.** Act of one who digs; condition of anything dug.

He shall have the pinnings; that is, the fruit of the subterranean of a tree, as herbs or grass is of the soil. He shall have the seasonable loppings; so he shall have seasonable diggings of an open mine.—*Bacon, Impediments of War*, (3rd MS.).

As our hopes must be confined, so must our designs; let us not project long designs, crafty plots, and diggings so deep, that the intricacies of a design shall never be unfolded, till our grand-children have forgotten our virtues or our vices.—*Jeremy Taylor, Rule and Exercise of Holy Dying*, ch. i. s. 2. (3rd MS.).

Within the last few years this word has first taken the special meaning of 'gold diggings,' and, thence, the colloquial or slang sense of *apportioned district, premises*, and the like.

**Dight. v. a.** [A.S. *dihtan* = prepare.]

1. Dress; deck; bedeck; embellish; adorn. But now, ye sleep-herd lasses, who shall lead Your wandering troops, or sink your virelays? Or who shall dight your bow'rs, with she is dead That was the lady of your holy-days?—*Spenser, Faerie Queene*.

Have a care you dight things handsomely; I will look over you.—*De Witt and Fletcher, Cicerone*. In an instant they were dighted, and came cleanly off, though they went foully on.—*Gayton, Notes on Don Quixote*.

Let my due foot never fail To walk the stultious cloisters pale, And love the high embowed roof, With antique pillar massy proof, And storied windows richly dight, Casting a dim religious light.—*Milton, St. Peter's*.

Just so the proud insulting laws Array'd and dighted Hudibras.—*Burton, Hudibras*.

**Dight. s.** [Lat. *digitus* = finger.]

1. Measure of length containing three fourths of an inch.

If the inverted tube of mercury be but twenty-five digits high, or somewhat more, the quicksilver will not fall, but remain suspended in the tube, because it cannot press the subjacent mercury with so great a force as doth the incumbent cylinder of the air, reaching thence to the top of the atmosphere.—*Boyle, Experiments touching the Spring of the Air*.

2. Any of the numbers expressed by single figures; any number under ten: (so called from counting upon the fingers).

Not only the number seven and nine, from considerations abstract, have been extolled by most, but all for most of other digits have been as systematically applauded.—*Sir T. Browne, Vulgar Errors*.

3. Finger, or corresponding part.

The ruminants have the 'clawed foot,' i.e. two hooved digits on each foot, forming a symmetrical pair, as by the cleavage of a single hoof. . . . The third division of the Gyrocampa enjoy a higher degree of the sense of touch through the greater number and mobility of the digits, and the smaller extent to which they are covered by horny matter. This substance forms a single plate, in the shape of a claw or nail, which is applied chiefly to one of the surfaces of the extremity of the digit, leaving the

other, usually the lower, surface possessed of its tactile faculty, whence the name 'unguicula,' which, in the present classification, is restricted to this group. . . . The claw is rudimentary or absent; the innermost digit is often stunted or absent. . . . The Carnivora are divided, according to modifications of the limbs, into 'phalangides,' 'plantigrades,' and 'digitigrades.'—*Owen, Anatomy of Vertebrates*, ch. xiv.

**Digit. v. a.** Point out with the finger. *Rare*; the extract being but a pedantic translation of a well-known line in Persius.

I shall never care to be digitized with a 'That is he.'—*Filliam, Recollections*, 28.

In the original: 'At pulchrum est, digito monstrari, et dicere: Ille est.' (Persius, Sat. I.)

**Digital. adj.** Consisting, or having the character, of a digit or finger.

**Digitate. v. a.** Point out as with a finger. *Rare*.

The resting on water, without motion, doth digitate a reason.—*Robinson, Endura*, p. 40: 1658.

**Digitated. part. adj.** [Lat. *digitatus* = fingered.] Branched out into divisions like fingers.

For animals multifidous, or such as are digitated, or have several divisions in their feet, there are but two that are uniparous; that is, men and elephants.—*Sir T. Browne, Vulgar Errors*.

**Digitigrade. adj.** In Zoology. Walking upon that part only of the feet which corresponds to the fingers and toes, as opposed to placing upon the ground the parts corresponding with the wrist and heel as well. See Plantigrade and extract.

We may advantageously insert, in this place, some general observations taken from M. Cuvier, who includes all these genera, together with the dogs, in his division named Carnivora. 'The most prevalent scientific character of the animals in question, according to the Règne Animal, is the constant presence of four large and long canine teeth separated, and between them six incisors in each jaw; the second of which, in the lower row, has always its root more deeply seated than the rest. . . . These animals are more exclusively carnivorous in proportion as their teeth are more or less cutting, and their regimen may be accurately known by comparing the extent of the tuberculous surface of their teeth with the part which is cutting. . . . M. Cuvier then proceeds to divide the whole into two primary groups, from a consideration of their different modes of walking, as exemplified by the structure of the hind feet. These are named the plantigrades and the digitigrades. The first stand or walk upon the entire sole of their foot; while the latter, in the same positions, are supported only upon their toes. . . . The bear family is alone plantigrade, while all the rest of the Carnivora are digitigrade. The distinction, indeed, is a good one; but, like every other, it may be badly used: the fact being, that the whole of the Felidae and the types of the Mustelidae walk upon their toes.—*Nesbitt, Natural History, Classification of Quadrupeds*, p. 162, 163.

**Digitigrade. s.** Digitigrade animal. (For examples see extract under preceding entry, also under Digit, 3.)

The noblest digladiation is in the theatre of ourselves.—*Sir T. Browne, Christian Morals*, i. 24. Aristotle seems purposely to intend the cherishing of controversial digladiations, by his own affectation of an intricate obscurity.—*Clauville, Scipias Scientific*.

**Dignation. s.** Honour. *Rare*.

The time was, when religion and all the more eminent dignities and fixtures of life, seemed to be enclosed and confined within the narrow compass of the hand and people of the Jews.—*Bishop Kidder, Demonstration of the Messiah*, p. 7. (Ord MS.).

**Dignity. v. a.** Advance; prefer; exalt; honour; adorn; give lustre to; improve by some adventitious excellence or honourable distinction.

If there be any dignitaries, whose preferments are perhaps not liable to the accusation of superfluity, they may be persons of superior merit.—*Swift*.

It appears from their reports that only about one hundred dignitaries, and eight parochial priests, resigned their benefices, or were deprived.—*Hallam, Constitutional History of England*, vol. I. ch. iii.

**Dignity. s.** [Fr. *dignité*.]

All improper diphthongs, or, as I have called them *digraphs*, are changed into the single vowels which they stand for.—*Sheridan*.

With conjugal carousals.

Thus, my furlough and ungrateful muse.

The best authors sprinkle their works with pleasing  
digressions, with which they recreate the minds of  
their readers.—*Dryden*.

## 2. Deviation.

The digression of the sun is not equal; but near  
the equinoctial intersections, it is right and greater;

*Browne, Vulgar Errors*.

**Digressional**, *adj.* Having the character of,  
relating to, or consisting of, a digression;  
deviating from the main purpose.

sional ornaments, which, however poetical, are here  
unnecessary.—*T. Warton, Notes on Milton's ju-  
venile Poems*.

## Digressive

**Digressive**, *adj.* Expatiating.  
The wild diffusion of the sentiments, and the  
digressive sallies of imagination, would have been  
compressed and restrained by confinement of rhyme.

—*Johnson, Lives of the Poets, Cowper*.  
The one frequently was digressive, even narrative  
and copious in illustration; in the other no deviation  
from his course was ever to be perceived.—*Lord*

*Reign of George III., &c.*

## Dijudicate

**Dijudicate**, *v. n.* [Lat. *dijudicare*, pass. part.  
of *dijudico*.] Determine; decide.  
And if great philosophers doubt of many things  
which popular *dijudicate* hold as certain in their  
creeds, I suppose ignorance itself will not say, it is  
because they are more ignorant.—*Glaucell, Vanity*

us the authority of the church in *dijudicating* of  
scriptures, seems only to speak of herself.—*Miles*,  
*Golden Remains*, p. 200.

## Dijudication

**Dijudication**, *s.* Judgement.  
It cannot be otherwise but that the love of our-  
selves should strongly incline us in our most ab-  
stracted *dijudications*.—*Glaucell, Vanity of Dog-  
matizing*, ch. 13. (Rich.)

**Dike**, *s.* [A.S. *dice*.—for spelling see Ditch.]

*Paul*, occur in rocks of all ages and vary in mag-  
nitude indefinitely. The . . . spaces between the  
fractured edges . . . is occasionally filled up by thick  
walls of igneous rock poured into the fissure in a  
molten state. In this latter condition the fluids  
with their contents are called *dikes*.—*Antisl*,  
*Geology*, p. 37.

*Tricks* of vascular and amygdaloidal lava are also  
seen traversing marine buff or pebbly mud of Pleis-  
tocene.—*Logie, Manual of Elementary Geology*, ch.  
122.

**Dike**, *v. n.* Work as a ditcher.

It were better *dike* and delve,  
And stand upon the right faith,  
Than know all that the bible saith,  
And erre as some clerks do.

**Dilacerate**, *v. a.* [Lat. *dilaceratus*, pass. part.  
of *dilacero*.] Tear; rend; force in two.

to come forth, *dilacerates* and breaks those parts  
which restrained him before.—*Sir T. Browne, Vul-  
gar Errors*.

*Great Asia*, p. 337.

**Dilaceration**, *s.* Act of rending in two.

Deep was that sense and grievous was that pain  
which these agonies produced, when the plowers  
piled upon his back and made him the furrows:  
the *dilaceration* of those nervous parts created a  
most sharp and dolorous sensation.—*Bishop Pear-  
son, Exposition of the Creed*, art. iv.

The greatest accumulation of pain is by the obstruc-

tion of the small vessels, and *dilaceration* of the  
nervous fibres.—*Arbuthnot*.

vished, they met half way in a gallant kind.—*Howell*,  
*England's Tears*.

**Dilapidate**, *v. n.* [Lat. *dilapidatus*, pass. part.  
of *dilapido*.] Go to ruin; fall by decay.

The church of Ely had, in the intestine tumults  
of the barbarous ages, been laid waste by the ir-  
ruption of an Highland chief, whom the bishop had  
offended; but it was gradually restored to the state  
of which the traces may be now discerned, and was  
at last not destroyed by the tumultuous violence of  
Knox, but more shamefully suffered to *dilapidate* by  
deliberate robbery and frigid indifference.—*Johnson*,  
*Journey to the Western Islands of Scotland*.

Large the domain, but all within combine  
To correspond with the dishonour'd sign,  
And all around *dilapidates*; you call  
But none reply: they're inattentive all;  
At length a ruin'd stable holds your steed,  
While you through large and dirty rooms proceed,  
Spacious and cold; a proof they once had been  
In honour,—now magnificently mean;  
Till in some small half-furnished room you rest,  
Whose dying fire denotes it had a guest.

*Crabbe, The Borough, Tass*.

**Dilapidate**, *v. a.* Make desert; consume  
wastefully.

Many pluralists do reside at one living for the  
greater part, and at the other for some considerable  
part of the year; and do neither *dilapidate*, nor  
neglect aims or hospitality.—*H. Wharton, Deference*  
*of Parishes*, p. 130: 1622.

Was her moderation gone in *dilapidating* the re-  
venues of the church?—*Bishop Horst*.

even the parish church unroofed and *dilapidated*.—*T.*

by economy.—*Muncatag, History of England*, ch. ix.

**Dilapidation**, *s.*

1. Decay in buildings in the occupancy of a  
tenant.

'Tis the duty of all churchwardens to prevent the  
*dilapidations* of the chancel and mansion-house be-  
longing to the rector or vicar.—*Ayliffe, Paragon*  
*of Common Law*.

So great a demand as the bishop had upon his  
predecessor's executors for *dilapidations*, could not  
very soon, or very easily, be brought to an accom-  
modation.—*Bishop Leath, Life of Wicliffe*, p. 60.

2. Ruin or decay in general

I have often heard it said, that by keeping a strict  
account of incomes and expenses, a man might easily  
preserve an estate from *dilapidation*.—*Goodwin*,  
*Winter Evening Conference*, pt. i.

**Dilapidator**, *s.* One who occasions dilapi-  
dation.

It is alleged, that non-residence and dilapidations  
for the most part go hand in hand; that you shall  
scarcely see a non-resident, but he is also a *dilapi-  
dator*.—*H. Wharton, Deference of Parishes*, p. 130.

**Dilatability**, *s.* Quality of admitting ex-  
pansion.

We take notice of the wonderful *dilatability* or  
extensiveness of the gullets of serpents: I have  
taken two adult mice out of the stomach of an old-  
der, whose neck was not bigger than my little finger.  
—*Ray, Wisdom of God manifested in the Works of*  
*the Creation*.

**Dilatable**, *adj.* Capable of expansion.

The windpipe divides itself into a great number of  
branches called bronchia: these end in small air-  
bladders, *dilatable* and contractile, capable to be  
inflated by the admission of air, and to subside at  
the expulsion of it.—*Arbuthnot, On the Nature and*  
*Choice of Aliments*.

**Dilatation**, *s.* [Lat. *dilatatio*, -onis.]

1. Act of extending into greater space: (op-  
posed to contraction).

The motions of the tongue, by contraction and  
*dilatation*, are so easy and so subtle, that you can  
hardly conceive or distinguish them aright.—*Hobler*,  
*Elements of Speech*.

I might also add . . . the contraction or dilatation  
of the apple of the eye.—*Smith, Portrait of Old Age*,  
p. 100.

2. State of being extended; state in which  
the parts are at more distance from each  
other.

Joy causeth a cheerful and vigour in the eyes;  
aloud, leaping, dancing, and sometimes tears: all  
these are the effects of the *dilatation*, and causing

forth of the spirits into the outward parts.—*Bacon*,  
*Natural and Experimental History*.

The heat-force being converted into movements  
of the parts of the pericardium subjected, the ex-  
pansion of the pericardium is the first sign of such  
change; in this area appears the embryonal trace, in  
the form of the parallel lines called 'plicae prae-  
cordiales,' which diverge to form the epicardic dilatation.  
... The vessel of the labyrinth swells into four  
*dilatations*, of which three are 'ampullar,' and the  
fourth 'cochlear': the ampullar *dilatations* extend  
into very slender canals, at first almost in the same  
plane, by which they are brought into mutual com-  
munication: as the canals expand and elongate,  
they assume their characteristic relative positions,  
an external, superior, posterior: the hinder end of  
the external canal being extended beneath the  
posterior canal. The cochlear *dilatation* curves as  
it elongates: an inner layer becomes distinct from  
the common membrane, and forms the acoustic  
lamina.—*Owen, Anatomy of Vertebrates*, ch. xiv.

**Dilate**, *v. a.* [Lat. *dilato*—widen, broaden.]

1. Extend; spread out; enlarge: (opposed  
to contract).

But ye thereby much greater glory gain,  
Than had ye sort'd with a prince's peer;  
For now your light doth more itself dilate,  
And in my darkness greater doth appear.

He hath so dilated himself with the beams of  
prosperity, that he lies open to all dangers.—*Bishop*

anvil, as our countryman Breakspear (Aldran IV.)  
said of himself: I have been strained through the  
limbeck of affliction.—*Howell, Familiar Letters*,  
vi. 50.

Satan alarm'd,  
Collecting all his might, dilated stood,  
Like Teneriff, or Atlas, unmov'd.

*Id.*, ix. 875.

2. Relate at large; tell diffusely and copiously.

I observing,  
Took once a plantain hour, and found good means  
To draw from her a prayer of earnest heart,

2. Speak largely and copiously: (generally

with on or upon).

grace, to transact the same publicly, and by them-  
selves; or their ministers to dilate upon it, and im-  
prove their lustre, by any addition or eloquence of  
speech.—*Lord Clarendon, History of the Grand*  
*Rebellion*.

But still they on their ancient joys dilate,  
Still with regret departed glories state,  
And mourn their grievous fall, and curse their rig-  
orous fate.

*Crabbe, The Borough*.

With of. Rare.

I will not talk of that, at which himself was silent,  
his condemnation; whereby the Lord of life was de-  
livered to the power of death: nor will I dilate of  
his crucifying.—*Walsall, Life of Christ*, sign. c. i.  
b. 161b.

**Dilate**, *adj.* Extensive.

And it is fit a good and honest prince,

**Dilatoriness.** *s.* Attribute suggested by Dilatory; slowness; sluggishness.

If the parliament would enact that a sum should be defalked from the ordinary fees of the lawyer, and that no cause should depend in any court above a time which they should prefix; this would very much remedy the dilatoriness of their processes.—*Moral State of England*, p. 63: 1670.

**Dilatory.** *adj.* Turdy; slow; given to procrastination; addicted to delay; sluggish; loitering.

These cardinals trifle with me: I abhor This dilatory sloth, and tricks of Rome.

**Dilemma.** *s.* [Gr. *ἑξάμμα*.]

1. In Logic. Argument equally conclusive by contrary suppositions.

A dilemma, that Morton used, to raise benevolence, some called his fork, and some his crutch.—*Baron, History of the Reign of Henry VII.*

Hope, whose weak being ruined is  
Alike if it succeed, and if it miss;  
Whom good or ill does equally confound,  
And both the horns of fate's dilemma wound.

A young rhetorician applied to an old sophist to be taught the art of pleading, and bargained for a certain reward to be paid, when he should gain a cause. The master sued for his reward, and the scholar endeavored to elude his claim by a dilemma. If I gain my cause, I shall withhold your pay, because the judge's award will be against you; if I lose it, I may withhold it, because I shall not yet have gained a cause. On the contrary, says the master, if you gain your cause, you must pay me, because you are to pay me when you gain a cause; if you lose it, you must pay me, because the judge will award it.—*Johnson*.

Every dilemma may be reduced into two or more simple conditional-syllogisms; e.g. 'If Eschines joined, &c. he is inconsistent; he did not join, &c. therefore he is inconsistent;' and again, 'If Eschines did not join, &c. he is unpatriotic; he did not, &c. therefore he is unpatriotic.' Now an opponent might deny either of the minor premises in the above syllogisms, but he could not deny both; and therefore he must admit one or the other of the conclusions; for, when a dilemma is employed, it is supposed that some one of the antecedents must be true, (or, in the destructive kind, some one of the consequents false), but that we cannot tell which of them is so; and this is the reason why the argument is stated in the form of a dilemma. Sometimes it may happen that both antecedents may be true, and that we may be aware of this; and yet there may be an advantage in stating (either separately or conjointly) both arguments, even when each proves the same conclusion, so as not to derive any additional confirmation from the other; still, I say, it may sometimes be advisable to state both, because, of two propositions equally true, one man may deny or be ignorant of the one, while he admits the other; and another man, vice versa. From what has been said, it may easily be seen that all dilemmas are in fact conditional-syllogisms.—*Whately, Elements of Logic*, ch. iv. §5.

2. Difficult or doubtful choice; vexatious alternative.

Between this dilemma of deaths, the sharp pikes of the soldiers on the one side, and fury of the fire on the other; he preferred the former, not as most honourable, and best complying with a military soul; (not being at leisure, alas! in time of turmoil, to stand on terms of credit); but as least painful.—*Fuller, Profane State*, p. 476.

A strong dilemma in a desperate case!  
To not with!—any, or quit the place. *Swift*.

**Dilettante.** *s.* pl. *dilettanti*. [Italian.] One who delights in cultivating or promoting science or art; amateur.

**Dilettanteism.** *s.* Character, occupation, object, or habits of a dilettante.

All these things combined not only to lift up the Turk, but to keep him aloft at a high pressure. This was not impaired by the succeeding period of dilettantism; of light touristic books of travel in the East, then newly opened and newly made safe to Europeans; of kindly Western poets trying to catch a spark of divine fire from the Eastern imagination; even of idealising peculiar institutions like polygamy and the harem, as we used to call it, under the impression that what was right for Egypt would be right for Turkey too.—*Lady Strangford, Eastern Shore of the Adriatic in 1833*, p. 323.

**Diligence.** *s.* Industry; assiduity; constancy in business; continuance of endeavour; unintermitted application.

**Diluvial.** *adj.* Diluvian; in Geology, connected with, formed by means of, or indicative of, Diluvium.

Since the date of the 'Reliquia Diluviane' and 'Oscure Fossiles,' many geologists have been accustomed to refer to a particular era and a violent agency the destruction of many land animals which lived with elephants and mastodons on the surface of Europe: the era was supposed to be the termination of a long post-tertiary period in which these animals lived;—the agency something of the nature of a cataclysm, and very extensive, if not universal. Their opinions were founded principally on the superficiality of situation, confused aggregation, and similarity of organic contents in the gravel, sands, and clays which constituted the deposits, and in many instances appeared to have been moved enormous distances across valleys and seas, or over elevated ranges of ground. These deposits were supposed to have happened on the dried and elevated land, because of the occasional abundance of bones of land animals in them; yet they appeared to be due to the action of large bodies of water; and the notion commonly entertained was, that the sea had been, by some violence of nature, thrown over the land, so as to destroy, at one definite epoch, over large tracts of the globe, whole races of existing mammals, and greatly modify the physical aspect of our planet. Fresh discoveries showed that the diluvial accumulations contained a great variety of deposits accumulated under different circumstances by water moving in different directions, and with various degrees of force; the remains of elephants, mastodons, &c., were found, though rarely, in really tertiary strata, both marine and freshwater: it was further observed, that the diluvial masses were totally absent from some districts, and in others appeared to have gone in various directions from a particular group or range of mountains. Influenced by these considerations and the growing importance of the study of modern causes in action, some of the most eminent geologists of England discredited totally from the views of Dr. Buckland, and declared, from the chair of the Geological Society, their conviction that the diluvial deposits did not belong to the effects of one general flood, and were not really distinguishable in origin, on the one hand, from the tertiary; and on the other from the modern effects of the sea, the rivers, and the land.—*J. Phillips, Treatise on Geology*, i. 251: 1852.

**Diluvian.** *adj.* Relating to, connected with, or formed by, a, or the, deluge. See Diluvium. [Reliquia Diluviane being the title of a well-known and influential work of Dr. Buckland's, the form in -an is commoner than it would have been otherwise; that in -al best matching with Alluvial. Both, however, are in use.]

trinita minori peritia sumptuose perficit," i.e. (says Muratori) "vulgaris tele sericis uno filo seu filo duobus, aut tribus contexta." (Falconius, Hist. Sicil. in Mur. Dec. 25.) In the same way the German name for velvet, *sammet*, is contracted from *Sammet*, from having been woven of six threads. **Dimorphism.** *s.* Having the quality of *Dimorphism*: (*Dimorphous* is a less correct form, though perhaps commoner).

(For example see second extract under next entry.)

**Dimorphism.** *s.* [Gr. *di*=twice, *μωρφή*=form.]

1. In *Chemistry.* Difference of form combined with identity of composition.

To the new branch of science laid open by the discovery of Mitscherlich the term isomorphism is applied; and those substances which assume the same figure are said to be isomorphous. Of these isomorphous bodies several distinct groups have been described by Mitscherlich. One of the most instructive of these contains the salts of arsenic and phosphoric acid. Thus, the neutral phosphate and biphosphate of soda have exactly the same form as the arseniate and bismarsenate of soda; phosphate and biphosphate of ammonia correspond to arseniate and bismarsenate of ammonia; and the biphosphate and bismarsenate of potash have the same form. . . . The circumstance that the same body occurs in two or more groups is explained by *dimorphism* and trimorphism. . . . Mitscherlich observed that biphosphate of soda is capable of yielding two distinct kinds of crystals, which, though different in form, in composition appear to be identical.

The more uncommon of the two forms resembled bismarsenate of soda; but the more usual form is quite dissimilar. He subsequently discovered that sulphur is capable of yielding two distinct kinds of crystals; and the same phenomenon now called *dimorphism* has been since observed in carbon, copper, &c. In some cases trimorphism has been observed. Thus, rutile, brookite, and anatase are three distinct forms of titanic acid. —*Turner, Elements of Chemistry, p. 383.*

2. In *Botany.* Difference of form combined with identity of parts and species.

We may, after a certain fashion, rudely group the kinds of *dimorphism* exhibited in the flower under two heads. First, a *dimorphism*, apparently favourable to variation, marked primarily by a partial or complete separation of the sexes, which may be accompanied or not by alteration in the form or arrangement of the parts of the perianth surrounding them; and, second, a *dimorphism*, conservative, and unfavourable to variation, marked primarily by an alteration in the form or arrangement (frequently a reduction) of the outer whorls of the flower, which more or less completely enclose and seal up the sexual organs, which are never wholly separated.

Such grouping we may well designate as rude, but there do certainly appear to be two classes or kinds of *dimorphism*, which even in the present state of our knowledge—being as it were our uncertain way—

—it may be well to distinguish. . . . It is to the first group that we may refer the primrose, and with them a very numerous company indeed of trees, and shrubs, and herbs. There are comparatively few natural orders of flowering plants out of the 200 or 300 which are generally recognized, in which we do not find more or less of a *dimorphic* condition: a condition which necessarily involves *dimorphism* in respect of the sexual organs. . . . A large proportion of the trees of temperate climates bear only flowers thus *dimorphic*. In the oak, beech, chestnut, and pine, for example, this *dimorphism* is extreme. In the stamen-bearing flowers, we find no rudiment of a pistil—in the pistil-bearing, no rudiment of stamens. But between plants which we may regard as wholly *homomorphic*, and consequently with flowers completely hermaphrodite, and the extremes just cited, we have an infinity of intermediate conditions. Parting from the hypothetical truly *homomorphic* hermaphrodite, we find in the case of Mr. Darwin's *Primula* one of the first grades of incipient *dimorphism* of which consciousness can be taken. . . . This second group we have not framed to include a *dimorphic* condition of the male flower, or of the female flower, of a unisexual plant. We are not aware, however, that such exist. If there be none, the circumstance is worth noticing.—*Natural History Review, no. vii. Review of Darwin on Primula.*

**Dimple.** *s.* Small cavity or depression in the cheek, chin, or other part.

The silver-slipper'd virgin lightly trod.

*J. Walton, Triumph of Isis.*

**Dim-sighted.** *adj.* Having dim sight.

Nor may the least suspicion of pride fall upon many women, who while they modestly use help to their complexions, are the more humbled and dejected, under the defects they find of native beauty, or lively colour; the remedying of which, by artificial applications, can be no more temptation to pride, than the use of crutches, or spectacles, to those that are lame and *dim-sighted*.—*Jeremy Taylor, Artificial Happiness, p. 90.*

Ask them for chronology, how *dim-sighted* are the ancients in the computation of time! *Halesid, Analogy, p. 216.*

but the eye cannot see more. It sees length and breadth, but no third dimension. In order to know that there are solids, we must infer as well as see. And this we do readily and constantly; so familiarly, indeed, that we do not perceive the operation. Yet we may detect this latent process in many ways; for instance, by attending to cases in which the habit of drawing such inferences misleads us. Most persons have experienced this delusion in looking at a scene in a theatre, and especially that kind of scene which is called a *diorama*, when the interior of a building is represented. In these cases, the perspective representations of the various members of the architecture and decoration impress us almost irresistibly with the conviction that we have before us a space of great extent and complex form, instead of a flat painted canvass. Here, at least, the space is our own creation; but yet here, it is manifestly created by the same act of thought as if we were really in the palace or the cathedral of which the halls and aisles thus seem to inclose us. And the act by which we thus create space of three dimensions out of visible extent of length and breadth, is constantly and necessarily going on. We are perpetually interpreting in this manner the language of the visible world. From the appearance of things which we directly see, we are constantly inferring that which we cannot directly see,—their distance from us, and the position of their parts.—*Whewell, History of Scientific Ideas*, ch. vi.

The peculiar and very high degree of optical illusion produced by the *diorama* depends upon two principles; the mode of exhibiting the painting, and the manner of preparing it. With respect to the first of these, the spectator and the picture placed in separate rooms, and the picture viewed through an aperture, the sides of which are continued towards the picture, so as to prevent any object in the picture room from being the painting itself. . . . The picture room is illuminated from the roof, which is glazed with ground glass; and the picture so placed that the light falls on it at a proper angle to be reflected towards the aperture. The roof, which is invisible to the spectator, is provided with an apparatus of folds or shutters, by which the intensity of the illumination may be increased or diminished at pleasure. . . . The second principle consists in painting certain parts of the picture in transparency, and admitting a stream of light upon it from behind, which, passing through the picture, produces a brilliancy far surpassing what could be obtained by illuminating the picture in the ordinary way, and renders the relief of the objects represented much stronger and more deceptive.—*Reynolds, Dictionary of Science, Literature, and Art, Diorama*.

**Diorism.** *s.* [Gr. *διωρισμός*.] Distinction, or definition, which in few words explains what is spoken of. *Rare*.

To eat things sacrificed to idols, is one mode of idolatry; but, by a prophetic *diorism*, it signifies idolatry in general. *Dr. H. More, Exposition of the Seven Churches*, p. 72.

**Dioristically.** *adv.* In a distinguishing manner. *Rare*.

Ye are not so pure and clean as ye ought to be, and free from the lusts of the flesh; which vice is here noted by *dioristically*, as idolatry in general before by eating things sacrificed to idols. —*Dr. H. More, Exposition of the Seven Churches*.

**Dip.** *v. a.*

1. Immerge; put into any liquor.

The person to be baptized may be *dipped* in water; and, as an immersion or dipping ought to be made according to the canon.—*1st Off.*, *Paragon J*.

Now on Fancy's easy wing convey'd,  
The king descended to the Elysian shade;  
There in a dusky vale, where Lethæ rolls,  
Old Æneas sits to *dip* poetic souls. *Pope, Dunciad*  
No fishes rising from the main,

Can soar with moisten'd wings on high;  
The moisture dry'd, they sink again,  
And dip their wings again to fly. *Swift*.

2. Moisten; wet.

And though not mortal, yet a cold shudd'ring dew  
*Dips* me all o'er, as when the wrath of Jove  
Speaks thunder. *Milton, Comus*, 802.

3. Be engaged in any affair.

When men are once *dip't*, what with the encouragements of sense, custom, familiarity, and shame of departing from what they have given themselves up to, they go on till they are *sunk*.—*Sir R. L'Estrange*.

In Richard's time, I doubt, he was a little *dip't* in the rebellion of the *Dryden, Fable*.

4. Engage as a pledge: (generally used for the first mortgage).

Be careful still of the main chance, my son,  
Put out the principal in trusty hands,  
Live on the use, and never dip thy lands. *Dryden, Persius's Satires*.

**Dip.** *v. n.*

We have *sunk* in our cups and in our dishes,

and whoever *dips* too deep will find death in the pot.—*Sir R. L'Estrange*.

I *dipp'd* among the worst, and Malus chose? *Dryden, Persius's Satires*.

4. In *Geology*. See *Dip*, *s.*

**Dip.** *s.*

1. In *Magnetism*. Downward inclination of the magnetic needle.

(For example see: extract under *Dipping-Needle*.)

2. In *Geology*. See second extract.

Great columns of stone hang down the face of some of these rocks almost perpendicularly, or with a very slight *dip*.—*Lyell*.

If a stratum or bed of rock, instead of being quite level, be inclined to one side, it is said to *dip*; the point of the compass to which it is inclined is said to be the point of *dip*, and the degree of deviation from a level or horizontal line is called the amount of *dip*, or the angle of *dip*. . . . The strike or line of bearing in the prolongation or extension in a direction at right angles to the *dip*.—*Lyell, Manual of Elementary Geology*, ch. v.

3. Candle made by dipping the wick in tallow: (opposed to Mould).

It is a solitary purser's *dip*, as they are termed at sea, emitting but feeble rays, and Vandykerken's eyes are directed to the door of the cabin to see who carries it. *Murray, Scarellano*, vol. i. ch. xix.

**Dipchick.** *s.* Same as *Dabchick*.

*Dipchick* is so named of his diving and listlessness. *Curlew*.

**Diphtheria.** *s.* [Gr. *διφθίρα* = leathern skin or garment; whence membrane like leather.] Disease so called, characterized by the formation of a false membrane on the fauces and trachea.

Reference was made in the last lecture to a second form of disease, resembling croup in some respects, though differing in others, alike but not the same, and calling therefore for a separate notice. This other disease, *angina maligna*, diphtheritis, or more correctly *diphtheria*, is not very muddy. . . . Near's unpretending account of the disease at Lankford, a century ago, details all the most characteristic features of *diphtheria*: the false membrane on the fauces, its extension to the air-passages, its appearance on blistered surfaces and upon the skin behind the ears, leave scarcely a symptom wanting to prove the identity of the two affections.—*West, On the Diseases of Infancy and Childhood*, lect. xvi.

**Diphtheritis.** *adj.* Connected with, relating to, or formed by, diphtheria.

The appearances produced by the extension of the *diphtheritic* deposit to the air-passages are precisely the same as those observed in cyanotic tracheitis.—*West, On the Diseases of Infancy and Childhood*, lect. xvi.

**Diphthong.** *s.* [Gr. *διφθόγγος*.] Condition of two vowels to form one sound: (as *ai*—in *air*).

We see how many disputes the simple and ambiguous nature of vowels created among grammarians, and how it has begot the mistake concerning *diphthongs*; all that are properly so are syllables, and not *diphthongs*, as is intended to be signified by that word.—*Hobler, Elements of Speech*.

Make a *diphthong* of the second *et* and *iota*, instead of their being two syllables, and the objection is gone.—*Pope*.

**Diphthongal.** *adj.* Having the nature or character of a diphthong.

Two vowels concurring in one syllable, so as to form a double vowel sound, make what is called a *diphthong*, as *ou* in round, *ui* in juice, and sometimes a *diphthongal* sound is expressed by a single vowel letter, as *u* in muse, *i* in mind, and sometimes by three vowel letters, as *eau* in beauty, *ieu* in lieu.—*Beattie, Elements of Moral Science*, pt. i. § 38. (Ord. MN.)

**Diploma.** *s.* [Gr. *δῖπλωμα*; Lat. *diploma*.] Letter or writing conferring some privilege: (so called because formerly written on waxed tables, *folding together*).

My present design is more relating to the nature of letters, than to the *diploma* or charters themselves.—*Wanley, Letter to Dr. Smith*.

Not only may the State, by its patronage, assist in promoting the diffusion of sound knowledge, both in the upper and lower strata of society; but it may also authenticate certain persons, as possess-

ing a competent amount of skill for the practice of a profession or calling. Thus it may, by proper examinations, ascertain the qualifications of candidates to practice medicine or law; and upon those who come up to the prescribed mark of fitness, it may confer *diploma*, or other authorities to practice. . . . The granting of *diplomas* by universities, or other learned bodies, proceeds on the supposition, that the public require some assistance to their judgment in the choice of professional services, and that such an official scrutiny into the qualifications of practitioners is a useful security against the imposture or incompetency of mere pretenders to skill. . . . Such [medical] degrees or *diplomas*, however, do not of themselves import more than an authentication by duly appointed public officers. . . . Hence, they are not necessarily licenses to practice, and do not imply any exclusive right. In this country, for example, any quack doctor may legally practice medicine: the *diplomas* of the public bodies which preside over the medical profession merely serve as guides to the public in the choice of their medical advisers. M. Dumas, in his work 'On the Liberty of Labour,' maintains, not only that medical *diplomas* ought to confer no exclusive right of practising medicine, but that they were merely as screens for incapacity, and substitutes for real knowledge, and ought therefore to be discontinued altogether.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix. § 17. (See also extract under *Diplomatics*.)

**Diplomacy.** *s.* Art of conducting relations with foreign states; business of an individual diplomatist; diplomatic body: (often used for *tact* like that shown or expected among diplomatists).

The foreign ministers were ordered to attend at this investiture of the directory; for so they call the managers of their burlesque government. The *diplomacy*, who were a sort of envoys, were quite awe-struck with 'the pride, pomp, and circumstance' of this majestic menagerie.—*Burke, Thoughts on a Regicide Peace*.

**Diplomat.** *s.* Diplomatist.

The treaty now under consideration contains, we are informed, between twenty and thirty articles. . . . But, unless the *diploma*s of Europe are strangely misinformed, general political differences have not come, and are not likely to come, just at present under discussion.—*Saturday Review*, June 3, 1843.

**Diplomate.** *v. a.* Invest with any rank, privilege, license, or authority conferred or indicated by a diploma. *Obsolete*.

By virtue of the Chancellor's letters he was *diplo-mated* doctor of divinity in 1600.—*A. Wood, Athens Græciana*.

**Diplomatic.** *adj.*

1. Relating to the art of deciphering old written characters and abbreviations.

One of the principal objects of the following work, is the illustration of what for near two centuries has been called the *diplomatic* science, the knowledge of which will enable us to form a proper judgment of the age and authenticity of manuscripts, charters, records, and other monuments of antiquity.—*Astle, Origin and Progress of Writing*, introd. (See also extract under *Diplomatics*.)

2. Respecting envoys and ambassadors, or the privileges belonging to them, and sometimes to others, in a public capacity.

The ambassadors from the rights of man, and their admission into the *diplomatic* system, I hold to be a new era in this business.—*Burke, On French Affairs*.

His lordship is a great member of the *diplomatic* body; he has of course all the fundamental treaties, which make the public statute law of Europe, by heart.—*Ed., Thoughts on a Regicide Peace*.

**Diplomatics.** *s.* [see *Chromatics*.] Art of determining the date and place of documents by internal evidence, or the examination of the documents themselves.

Documents or *diplomas* are writings which stipulate a right, confer an estate, bestow a privilege, a title, or a dignity, or record one particular important transaction in a solemn form. The word *diploma* occurs but rarely in the documents themselves. They are in general styled *Præceptum*, *Auctoritas*, &c. . . . Latin was the *diplomatic* language in both the Eastern and Western Empire until the year of our era 602, after which the Greek language alone was used in the documents of the Eastern and the Latin in those of the Western Empire. . . . The science of *diplomatics* owes its origin to a Jewit of Antwerp named Papdorch.—*Rees, Knapel-pædia*.

**Diplomatist.** *s.* One employed, or fit to be employed, in diplomacy; one who, in the management of any matter, shows tact or skill such as belongs to diplomacy.

He was justly esteemed one of the first *diplo-*

*matists* in Europe: but the talents and accomplishments of a diplomatist are widely different from those which qualify a politician to lead the House of Commons in agitated times.—*Macaulay, History of England*, ch. ii.

### Dipper. s.

#### 1. One who dips.

The chief enemy was a dipper, Pharaoh; the first and last of kings that were so, as the Red Sea can witness.—*Whitlock, Observations on the present Manners of the English*: 1651.

In which number, I must be forced to reckon that doctor, who in a late equivocal treatise plausibly set afloat against the *dippers*, diving the while himself with a more deep jesuitical malignance against the present state and church-government, mentions with jehonimy 'the Tractate of Divorce'.—*Milton, Tetrachordon*.

Our townsmen, since of floods they must turn skippers.

Will change religion too, and so turn *dippers*.

(*Chenland, Poems*, &c. p. 18.)

#### 2. Bird so called; water ouzel (Cinclus aquaticus).

The dipper frequents clear rocky mountain streams, and although allied to the thrush or the blackbird in its internal organization and many of its actions on land, it has also the habits and powers of the moorhen.—*Farrall, British Birds*.

**Dipping**, verbal *abs.* (used also adjectically, or as the first element in a compound.) Act of one who dips; process by which any thing is dipped: (with a special application to work in metal).

Ornamental works in brass are usually brightened by a process called dipping. After the work has been properly fitted together, and the grime removed, either by the action of heat or by boiling in a pearl-ash lye, it is pickled in a bath of dilute aquafortis. It is then secured bright with sand and water, and is then dipped in a solution of nitric acid, which consists of pure nitrous acid, commonly known as *dipping aqua fortis*, for an instant only, and is then well washed with cold and hot water to remove every trace of acid from the surface, after which it is put into dry beech or box wood sawdust, &c., well rubbed until it is quite dry, and then polished and lacquered with as little delay as possible.—*Enc. Dictionary of Arts, Manufactures, and Mines*.

**Dipping-needle.** s. Needle showing the magnetic Dip.

But the earth has also a further influence upon an artificial magnet, which is only rendered evident when it is so suspended as to move freely in every direction. Under these circumstances, and in our latitudes, the north pole of the needle is attracted downwards, as well as to the north, and assumes a position almost vertical. . . . This inclination to the horizontal plane is called the *dip* of the magnetic needle. . . . When a bar of soft iron is held nearly vertical, or in the direction of the dipping needle, its ends are no longer indifferently attractive of a poised magnet; but (no longer only as it continues in or near that position) it is polar, the lower end of the bar being a north pole, and the upper end a south pole, and it attracts the magnetic needle accordingly.—*Brande, Chemistry*, p. 216.

**Dipsas.** s. [Gr. *δῖψας*; from *δίψα*—thirst.] Serpent whose bite produces the sensation of unquenchable thirst.

Scorpion, and asp, and amphibia *dips*,  
Corusks horn'd, hydra, and elaps draw,  
And *dipsas*.—*Milton, Paradise Lost*, x. 524.

**Diptera.** s. [Gr.; from *δί*, twice, *πτερόν*—wing.] Class of insects so called, represented by the housefly, gnat, gallier longlegs, &c. (*Dipterous* and other allied words are congeners.)

The wings of insects are essentially flattened vesicles, sustained by slender but firm hollow tubes called 'nervures' along which branches of the trachea, and channels of the circulation, are continued. The wings never exceed two pairs. . . . Sometimes one or other of these pairs is wanting. The wings present many varieties in their shape, their consistence, and their ornaments. When they subserve flight, they are thin and transparent; or, if opaque, are rendered so by an imbricated clothing of most delicate scales, which, when detached, resemble the pollen of flowers. . . . When the hinder pair of wings is wanting, it is replaced by a pair of rudimentary appendages called balancers: other modifications, or appendages to the wings have been called 'alulae' and 'patagia'. The orders of insects, as before remarked, [are] founded upon the modifications of the wings. . . . The order *Diptera* is characterized by the development of the anterior pair of wings into organs of flight, and the retention of the hinder pair in the condition of minute clavate appendages, usually called the 'halteres'. The prothorax and metathorax are rudimentary whilst the mesothorax is disproportionately large to form

the required space for the powerful muscles, which execute, through the two anterior wings, the function of flight.—*Owen, Lectures on Comparative Anatomy*, lect. xvi.

**Diptych.** s. [Lat. *diptycha*; Gr. *διπτύχον*—twice folded.] Writing tablets consisting of two tablets hinged at the back; register of bishops, saints, and martyrs.

They had a lower degree of remembrance for bishops, and confessors, and all other eminent persons departed this life: whom they not only praised in orations at their funerals, but writ their names in their *diptychs* or two-leaved records: which contained, in one page, all the names of the living; in the other, the dead that were of note in the church.—*Bishop Lloyd, Sermons*, p. 19.

The commemoration of saints was made out of the *diptychs* of the church, as appears by multitudes of places in St. Austin.—*Bishop Stillingfleet*.

**Dire.** *adj.* [Lat. *dirus*.] Dreadful; dismal; mournful; horrible; terrible; evil in a great degree.

Would create soldiers, make our women fight,  
To doff their *dire* distresses.

Hydra, and gorgons, and chimeras *dire*.

Blackstone, Commentaries on the Laws of England.*
- Directress. s.* Female director. *Rare.*  
Our reason being the nobler principle of our nature, that by which we are raised above the level of brutes, yet by which we are allied to angels, and do border upon God himself, ought upon that account, to be submitted to, as the supreme regent and *directress* of all our other powers, and to be looked upon as the rule of our will, and the guide of all our animal motions. — *Scott, Christian Life, l. 3.*
- Directrix. s.* [Lat.] Directress. *Rare.*

[This word is frequent among the poets, but has been censured as not analogical; all other words compounded with *full* consisting of a substantive and *full*; as, *dreadful*, or *full of dread*; *joyful*, or *full of joy*. So far Dr. Johnson. I must add, however, that good writers, besides the poets, use this word; as the sentence of Bishop Richardson, and the remarks of Dr. Addison and Bishop Bull, now added to the examples, show. Dr. Addison's use of the word carries the etymology to the Latin *dire*, curses, and *full*; i. e. full of curses, which removes the want of analogy which Dr. Johnson states. But all other words compounded with *full* do not consist of a substantive and *full*; witness *rewardful*, admitted by Dr. Johnson himself into his dictionary. — *Tobin.*]

The principle of not importing a word when it is not required, by no means implies that, when a word of foreign growth is excellent of its kind and cannot be produced on our own soil, we should refuse to receive it. The word 'parent,' for instance, is one for which we could not easily find or coin an equivalent in the Anglo-Saxon portion of English. We have done well to take it, — it is now a part of the language, — and being so, we should do well to construct from it, whenever it is found advisable, the word 'parenthetical,' for which there is no equivalent in the original Latin. By the judicious adoption of a single foreign prefix where our own is not well adapted for compounds, we might often introduce, as we have already done in some instances, not a single new word, but a hundred. Such a compound as 'semi-built' would be clumsy, — by taking the Latin 're' we form 're-built' with very good effect. So the 'ex' of 'ex-king' and 'ex-queen,' the 'vice' of 'vice-president' and 'vice-chairman,' have done the English language excellent service. Again, there are some foreign words that must be had from other languages at any price, — words that are struck out in some phase of language by a happy accident, and that the world may be glad to get just as they are. The Portuguese are without a word corresponding to the English 'disappoint,' and one of their poets has expressed very forcibly his sense of their want of it by putting it in the mouth of the devil in his dialogue with a Portuguese friar: —  
Fiquel *desapontado*, como dizem  
Os Indios: — não ha na vossa lingua  
Com que o dizer — a venha ou não do diabo  
Tomem-na que hão mister d'essa palavra.  
'So I was *disappointed*, — as they say  
In English, 'tis a word you never had;  
But reach you through the devil so it may,  
Don't let it go — you want it very bad.'  
(Almeida Garrett's poem of Dona Branca, c. vi. st. 21.)

Our belief or *disbelief* of a thing does not alter the nature of the thing.—*Archbishop Tillotson*.

The result of the examination of evidence is not 'always belief, but even suspension of judgment; it is sometimes *disbelief*. The philosophy, therefore, of induction and experimental inquiry is incomplete unless the grounds not only of belief, but of *disbelief*, are treated of. . . . By *disbelief* is not here to be understood the mere absence of belief. The ground for sustaining from belief is simply the absence or insufficiency of proof; and in considering what is sufficient evidence to support any given conclusion, we have already, by implication, considered what evidence is not sufficient for the same purpose. By *disbelief* is here meant, not the state of mind in which we form no opinion concerning a subject, but that in which we are fully persuaded that some opinion is not true; inasmuch that if evidence, even of great apparent strength, (whether grounded on the testimony of others or on our own supposed perceptions,) were produced in favour of the opinion, we should believe that the witnesses spoke falsely, or that they, or ourselves if we were the direct percipients, were mistaken. That there are such cases, no one is likely to dispute. Assertions for which there is abundant positive evidence are often *disbelieved*, on account of what is called their improbability, or impossibility. And the question for consideration is, what, in the present case, those words mean, and how far and in what circumstances the properties which they express are sufficient grounds for *disbelief*. . . . It is a case for comparison of probabilities. If the approximate generalizations leading to the affirmative are, when added together, less strong, or in other words, farther from being universal, than the approximate generalizations which support the negative side of the question, the proposition is said to be improbable, and is to be *disbelieved*, provisionally. If, however, an alleged fact be in contradiction, not to any number of approximate generalizations, but to a completed generalization grounded on a rigorous induction, it is said to be impossible, and is to be *disbelieved* totally.—*J. S. Mill, System of Logic*, ch. xiv.

It is sound alone that doth immediately and incorporeally affect most; this is most manifest in music, and concerts and *discords* in music: for all sounds, whether they be sharp or flat, if they be sweet, have a roundness and equality; and if they be harsh, are unequal, for a *discord* itself is but a harshness of divers sounds meeting.—*Bacon*.

It is the lark that sings so out of tune,  
Straining harsh *discords* and unpleasant sharps.

*Shakespeare, Romeo and Juliet*, iii. 5.

**Discord.** *v. n.* Disagree; not suit with.

Two strings of a musical instrument being struck together, making two notes that arrive at the ear at the same time as to sound, yield a sound differing from either of them, and as it were compounded of both; inasmuch, that if they be discordantly tuned, though each of them struck apart would yield a pleasing sound, yet being struck together they make a harsh and troublesome noise.—*Boyle, Experiments and Considerations touching Colours*.

It is usually said to be of two kinds: viz. discount of bills, and discount of goods; but they are essentially the same. When a bill of exchange is presented at a banker's for discount, it is the practice to calculate the simple interest for the time the bill has to run, including the days of grace, which interest is called the discount, and this being deducted from the amount of the bill the balance is paid over to the presenter of the bill.—*Mculloch, Dictionary of Commerce*.

If the State be fitted at all for establishing a standard of opinion, there is no function which it can so properly assume as that of authorizing printed works, or prohibiting their publication. It would be necessary to say something of the state to which the war hath reduced us; such a *discovery* ought to be made as late as possible.—*Swift*.  
With respect to the meaning of the terms in question, '*discovery*,' and '*new truth*;' it matters not whether we confine ourselves to the narrowest sense, or admit the widest, provided we do but distinguish. There certainly are two kinds of '*new truth*' and of '*discovery*.' If we take those words in the widest sense in which they are ever used. First, such truths as were, before they were discovered, absolutely unknown, being not implied by anything we previously knew, though we might perhaps suspect them as probable. Such are all matters of fact strictly so called, when first made known to one who had not any such previous knowledge, as would enable him to ascertain them a priori; i.e. by reasoning. . . . The other class of *discoveries* is of a very different nature. That which may be elicited by reasoning, and consequently is implied in that which we already know, we seek to on that ground, and not from observation or sense alone. To take a geometrical truth upon trust, or to attempt to ascertain it by observation, would betray a total ignorance of the nature of the science. . . . It is of the utmost importance to distinguish these two kinds of *discovery* of truth. In relation to the former, as I have said, the word '*information*' is most strictly applied; the communication of the latter is more properly called '*instruction*.' . . . It is a question comparatively unimportant, whether the term '*discovery*' shall or shall not be extended to the eliciting of those truths, which, being implied in our previous knowledge, may be established by mere strict reasoning. . . . To use one more illustration. Reasoning has been aptly compared to the piling together blocks of stone; on each of which, as on a pedestal, a man can raise himself a small, and but a small height above the plain; but which, when skillfully built up, will form a flight of steps, which will raise him to a great elevation. Now (to pursue this analogy) when the mason or tiler all ready to the builder's hand, the blocks ready dug and brought, his work resembles one of the two kinds of *discovery* just mentioned, viz. that to which we have assigned the name of instruction; but if his materials are to be entirely, or in part, provided by himself,—if he himself is forced to dig fresh blocks from the quarry,—this corresponds to the other kind of *discovery*.—*Whately, Elements of Logic, b, iv, ch. ii, § 1*.

**Discoverable. v. a.** ? Leave the cradle. *Rare*.  
We know all, Clifford, fully since this meteor,  
This airy apparition first *discover'd*

**Discover. v. a.** Bring into a condition of dyscrasy. *Rare*.

Congenial object in the cockle kind.

**Discrepancy. s.** Difference; contrariety; disagreement.

The only question which admitted any variety of *discrepancy* among the ancients was, who were the persons to whose souls the soul of Christ descended.—*Bishop Pearson, Exposition of the Creed, art. v*.

**Discrepancy. s.** Difference.

There is diversity of judgements, *discrepancy* of opinion among divines both old and new.—*Bishop Montague, Appeal to Caesar, p, 147*.

Diversity of education, and *discrepancy* of those principles where-with men are at first imbued, and wherein all our after reasonings are founded.—*Lord Dighy, Letter to Sir K. Dighy*.

What the aim is, that the offer is not; and in such a visible *discrepancy*, that if one were fetched from the remotest parts of the earth the sun displayeth his beams upon, yea from the very Antipodes, he would agree with either better than they do one with another.—*Howell, Instructions for foreign Travel, p, 73*.

While the freedom of the investigation depends upon the absence of external force, its right issue depends upon undamaged machinery within; and it is the most miserable of all our human delusions, that we actually require *discrepancy* of opinion—require and demand error, falsehood, blindness, and plunge ourselves upon such *discrepancy* as attacking a freedom which is only valuable when used for unity in the truth, and which is an evil when wrongly, as it is a good when rightly employed.—*Gladelund, The State in its Relations with the Church*.

**Discrepant. adj.** Different; disagreeing; contrary.

To that intent was speech specially given, wherein he is most *discrepant* from brute beasts.—*Sir T. Elyot, The Governour, fol. 77*.

**Discrete. adj.** [Lat. *discretus*, pass. part. of *discernere*; dis implying difference, and *cerno* = see, perceive, take cognizance of; from the same root as the Greek *κρινω* = judge. *Cretus* is also the participle of *creo* = grow; so that if there existed such a word as *discreo* = grow separately, become separate,

the origin of the word before us, in some of its senses, might be equivocal. That this is not an imaginary difficulty may be seen under Concrete. Concrete is the ordinary opposite to abstract; it is probable, however, that it has a second sense, the opposite to *discrete*, of which the origin is the *cretus* from *cerno*. Discreet, with the same origin, is conveniently differentiated from *discrete* by its spelling.]

# 1. Distinct; disjointed; not continuous.

# Discretion. s.

## 1. Prudence; knowledge to govern or direct one's self; skill; wise management.

Modestly wemeth to be much like that which men commonly call *discretion*. Albeit *discreto* in Latin signifieth separation; wherein it is more like to election. But as it is commonly used, it is not only like to modesty, but is the self-modesty. For he that forbearth to speak, although he can do it both wisely and eloquently, because neither in the time, nor in the hearer, he findeth opportunity so that no fruit may succeed of his speech; he therefore is vulgarly called a *discreet* person.—*Sir T. Eggot, The Governour*, fol. 78.

But care in poetry must still be had: It asks *discretion*, even in running mad. Pope. There is no talent so useful towards rising in the world, or which puts men more out of the reach of fortune, than *discretion*, a species of lower prudence.—*Swift*.

## 2. Liberty of acting at pleasure; uncontrolled and unconditional power: (as, 'He surrenders at discretion'; that is, so as to be liable to whatever may seem good to the person to whom the surrender is made, or without condition, reserve, or stipulation).

## 3. Disjunction; separation. Obsolete.

It is very probable, that to shew their despatch of the poor Gentiles, and to pride themselves in their prerogative and *discretion* from them, they [the Jews] affected to have such acts there done.—*Mede, Discribe*, 101.

## Discretionary. adj. Unlimited in freedom of choice or action; discretionary.

We have a kind of sketch of dress, if I may so call it, among us, which, as the invention was foreign, is called a *dishabille*; every thing is thrown on with a loose and careless air; yet a genius discovers itself even through this negligence of dress, just as you may see the masterly hand of a painter in three or four swift strokes of the pencil. — *Guardian*, no. 149.

The bishop of Chichester, in opening the disputation of Henry the Eighth with Lambert, in Westminster Hall, ranked the king's disincorporation of the monks with his rejection of the see of Rome, his abolition of idolatrous adoration, and the introduction of the English Bible, as a matter of an external nature, and in no respect interfering with the essential of the catholic communion.—*T. Watson, Life of Sir T. Pope*, p. 41.

**Disinfect, v. a.** Free from infection.

(For example see extract under next entry.)

**Disinfectant, s.** That which frees from any infective quality.

It is well not to confound it [disinfectant] with antiseptic, which applies to those bodies which prevent putrefaction. The word disinfectant has lately become somewhat uncertain in its meaning, on account of a word being used as its equivalent, viz. *deodoriser*. This latter means a substance which removes odours. In reality, however, there are no such substances known to us as a class. There are, of course, some substances which destroy certain others having an odour, but in all cases the removal of the smell and the destruction or neutralisation of the body must be simultaneous. There is, however, a large class of substances that destroy putrefaction, and the name disinfectant is therefore distinctly needed. . . . When the infectious matter and the odoriferous matter are one, as in the case, so far as we know, of putrid flesh, &c., then to *deodorise* is to disinfect. We can find then no line of duty to be performed by *deodorisers*, and no class of bodies

that can bear the name, although there may be a few cases where the word may be found convenient. If, for example, we destroy one small by superadding a greater, that might in one sense be a *deodorizing*. . . . The appalling stage is by no means the most dangerous, nor has the use of the word *deodorizing* any relation to sanitary matters, except in the grossest sense; it is desirable that persons should look far beyond the mere indications furnished by the nose, and as in science we can find no *deodorizers*, so in practice we need not look for any in the sense usually given to the word. The word may be used for such substances as remove the odour and the putrefaction of the moment, but allow them to begin again. Even in this case *deodorizers* become temporary *disinfectants*, which character all removers of smell must more or less have. . . . Although air acts partly in conjunction with the soil and the rain to cause *disinfection*, and partly by its own power, it also acts mechanically as a means of removing all noxious vapours. The wind and other currents of the air are continually ventilating the ground, and when these movements are not sufficiently rapid, or when they are interrupted by our mode of building, we are compelled to cause them artificially, and thus we arrive at the art of ventilation. — *Ure, Dictionary of Arts, Manufactures, and Mines, Disinfectant*. (Hunt.)

As agents capable of being employed in the *deodorization* and purification of offensive liquids, such as bilge-water and sewerage-water, there are chloride of zinc . . . perchloride of iron (Kilman's *deodorizing fluid*), . . . but these liquids are not true *disinfectants*, and are merely serviceable in *deodorizing* by fixation. — *Chambers's Encyclopædia*, in voce.

**Disinfecting. part. adj.** Having the power to disinfect.

The walls should be well washed with chloride of lime, or Sir W. Burnett's *disinfecting fluid*, after the dogs are removed, and some days, or even weeks should elapse before others are placed in them. — *Stonchuge, The Greyhound*, ch. iii.

There cannot be any thing so *disingenuous* and misbecoming any rational creature, as not to yield to plain reason and the conviction of clear arguments. — *Locke*.

**Disingenuously. adv.** In a disingenuous manner.

Milton, who had a controversy with [bishop] Hall, in a remonstrance called an *Apology for Sundry Synonyms*, published in 1641, rather unsuitably and *disingenuously* goes out of his way to attack these Satires, a juvenile effort of his dignified adversary, and under every consideration alien to the dispute. — *T. Warton, History of English Poetry*, iv. 50.

**Disingenuousness. s.** Attribute suggested by Disingenuous; mean subtlety; unfairness; low craft.

The chief minister of the revenue was obliged to prevent, and even oppose such *disinheritance*. — *Lord Clarendon, History of the Grand Rebellion*.

— *Milton, Comus*, 332.

**Disinheritance. s.** Deprivation of the state, rights, or prospects, of inheritance.

The king of England is in no way accountable or amenable to the jurisdiction of the Pope for his rights over the kingdom of Scotland; he must not permit those rights to be called in question. It would be a *disinheritance* of the crown of England and of the royal dignity, a subversion of the state of England, if the king should appear by his proctors or ambassadors to plead on those rights in the court of Rome. — *Milman, History of Latin Christianity*, b. xi. ch. ix.

**Disintégration. s.** Process by which anything is disintegrated; condition resulting therefrom.

Oxidation, drought, wind, frost, rain, glaciers, rivers, waves, and other denuding agents effect *disintegrations* that are determined in their amounts and qualities by local circumstances. Acting upon a tract of granite, such agents here work scarcely an appreciable effect; there cause exfoliations of the surface, and a resulting heap of debris and boulders; and elsewhere, after decomposing the felspar into a white clay, carry away this with the accompanying quartz and mica, and deposit them in separate beds, fluviatile and marine. When the exposed land consists of several unlike formations, sedimentary and igneous, changes proportionably more heterogeneous are wrought. The formations being *disintegrable* in different degrees, there follows an increased irregularity of surface. — *Herbert Spencer, Inductions of Biology*, § 118.

(For another example see first extract under Detritus.)

**Disinter. v. a.** Unbury; take as out of the grave.

**Disinterest. s.** That which is contrary to one's wish or prosperity; that which anyone is concerned to prevent.

That ye indulge this liberty to yourselves . . . others is to cast a stumbling-block before the children of Israel, and to occasion and encourage many to adhere to the Roman communion, w<sup>h</sup> they ought to separate from her, that there be no prejudice done to my true church, nor *disinterested* to thy kingdom. — *Dr. H. **Disinterested. part. adj.** Divested of interest or interested motives; superior to regard of private advantage; not influenced by private profit.

As *disinterested* as you appear to the world, no man is more in the power of that prevailing favourite passion than yourself. — *Swift*.

Thus, such a syllogism as this, 'Every true patriot is *disinterested*; few men are *disinterested*;' therefore few men are true patriots, might appear at first sight to be in the second figure, and faulty; whereas in fact, with the premises transposed, for you do not really predicate of 'few men,' that they are '*disinterested*,' but of '*disinterested* persons,' that they are 'few.' — *Whately, Elements of Logic*, b. II. ch. iv. § 7.

Even among the instructions which Craterus took with him, one is said to have been, to put Phœnix in possession of an Asiatic city, which he should select from four that were to be offered to him. All this may be considered as a pure tribute of *disinterested* reverence for extraordinary virtue, but it was not the less likely to produce a powerful effect on minds not formed to prize virtue as its own reward, or to believe that it could be so esteemed by others. — *Thirlwall, History of Greece*, ch. vi.

**Disinterestedly. adv.** In a disinterested manner.

And then the orator pronounced a warm panegyric on his friend Somers. 'Would that all men in power would follow the example of my lord keeper, if all patronage were bestowed as judiciously and *disinterestedly* as his, we should not see the public offices filled with men who draw salaries and perform no duties.' — *Mandavay, History of England*, ch. xx.

**Disinterestedness. s.** Attribute suggested by Disinterested; contempt of private interest; neglect of personal profit.

These expressions of selfishness and *disinterestedness* have been used in a very loose and indeterminate manner. — *Sir T. Browne, Vulgar Errors*.

Igneus, the proscriber, was one of the few men then living at Athens, who could undertake such a task with dignity, as conscious of a life irreproachably spent in the service of his country. There are few Athenian statesmen of any age who can bear a comparison with him; Phœnix equaled him in honesty and *disinterestedness*; but in his general character, and in his political conduct, seems to fall far below him. — *Thirlwall, History of Greece*, ch. vi.

These dispositions, both of prince and people, had  
not alone induced him [Robert] to engage in so bold  
a resolution, with such a breach of his duty and  
trust, without the practices and insinuations of the  
King of France, who grown jealous of King William's  
greatness, and envious of his felicity, found no better  
way of lessening both, than to kindle this fire in his  
own house, and thereby the most sensibly to dis-  
quiet his mind as well as to *disjoin* his state, and  
divide his power.—*Sir W. Temple, Instructions to the History of England*, p. 275.

Were it possible for any power to add to it ever so  
little, it would at once overstep its bounds; the  
equilibrium would be disturbed; the framework of  
affairs would be *disjointed*.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

'I'm satisfied now—time to give up,' and the corporal

2. Break at junctures; separate at the part where there is a cement.

And as for his coach, seeing it so villainously used  
and so ill handled as it was, he would not only have

joined, *disjointed*, and pulled asunder.—*Harnar, Translation of Beza's Sermons*, p. 384: 1587.

dark idea of either of those excellent and useful in-  
ventions.—*Watts.*

**Disjointly.** *adv.* In a disjointed state.

No one virtue can be without another: St. Am-

I'll point you where . . . you may  
Enjoy your mistress, from the whom, I see,  
There's no *disjunction* to be made, but by  
. . . your ruin.—*Shakespeare, Winter's Tale*, iv. 3.  
There is a great analogy between the body natural  
and politic, in which the ecclesiastical, or spiritual  
part, justly supplies the part of the soul; and the  
violent separation of this from the other, does as  
certainly infer death and dissolution, as the *dis-*  
*junction* of the body and the soul in the natural.—*South, Sermons.*

**Disjunctive.** *adj.*

1. Incapable of union.

Such principles, whose atoms are of that *disjunc-*

tive nature, as not to be united in a sufficient  
number to make a visible mass.—*Grew.*

2. Marking separation or opposition: (as 'I love him, or fear him').

There are such words as *disjunctive* conjunctions.  
—*Watts.*

3. In Logic.

A *disjunctive* proposition is when the parts are  
opposed to one another by *disjunctive* particles: as,  
'It is either day or night: the weather is either  
shiny or rainy: quantity is either length, breadth, or  
depth.' The truth of disjunctives depends on the  
necessary and immediate opposition of the parts,  
therefore only the last of these examples is true;  
but the two first are not strictly true, because  
twilight is a medium between day and night; and  
dry cloudy weather is a medium between shining  
and raining.—*Halle, Logic.*

A *disjunctive* syllogism is when the major pro-  
position is *disjunctive*: as, 'The earth moves in a  
circle, or an ellipse; but it does not move in a  
circle, therefore it moves in an ellipse.—*Ibid.*

**Disjunctive.** *s.* Disjunctive conjunction.

Of these *disjunctives* some are simple, some ad-  
versative; simple, as when we say, Either it is day,  
or it is night; adversative, as when we say, It is not  
day, but it is night.—*Marria, Hermes*, ii. 2.

**Disjunctively.** *adv.* In a disjunctive man-  
ner; distinctly; separately.

What he observes of the numbers *disjunctively*  
and apart, reason suggests to be applicable to the  
whole body united.—*Dr. H. More, Discourse of Christian Piety*.

But if the several antecedents have each a differ-  
ent consequent, then the antecedents, being, as  
before, *disjunctively* granted, you can only *disjunc-*  
*tively* infer the consequents: e.g. if A is B, O is D;  
and if X is Y, E is F; but either A is B or X is Y;  
therefore either O is D or E is F. 'If Aschines  
joined in the public rejoicings, he is inconsistent; if  
he did not, he is unpatriotic; but he either joined,  
or not: therefore he is either inconsistent or un-  
patriotic.' This case, as well as the foregoing, is  
evidently constructive.—*Whately, Elements of Logic*,  
b. ii. ch. iv. § 6.

equally refrangible, do fall upon a circle answering

Do cloud my joys with danger and with sorrow.

him continual *dislikes* to sin.—*Hammond, Practical Catechism.*  
Our likings or *dislikes* are founded rather upon  
humour and fancy than upon reason.—*Sir R. L. Estlin.*

severe as philosophy. It would have rested in inward  
senses, tacit *dislikes*.—*South.*

own character, you discover not only your *dislike* of  
another, but of himself.—*Addison.*

blance; unlikeness. *Rare.*

*ness* between these things.—*Wandreghe, French and English Grammar*, p. 392: 1623.

That which is not designed to represent any thing  
but itself, can never be capable of a wrong rep-  
resentation, nor mislead us from the true apprehen-  
sion of any thing by its *dislike*ness to it; and such,  
excepting those of substances, are all our own  
complex ideas.—*Locke.*

**Dislike.** *s.* One who dislikes; disapprover; one who is not pleased.

But whom in wrath she then wounds, she pities,  
as being an affectionate lover of universal mankind,  
though an unaccountable *dislike* of their vice.—*Dr. H. More, Conjectura Cabbalistica*, p. 214.

We should not overlook, among the causes that contributed to the dominion of the popes, their prerogative of *dispensing* with ecclesiastical ordinances. The most remarkable exercise of this was as to the canonical impediments of matrimony. . . . It was not until the twelfth that either this or any other established rules of discipline were supposed liable to arbitrary dispensation; at least the stricter churchmen had always denied that the pope could infringe canons, nor had he asserted any right to do so. But Innocent III. laid down as a maxim, that out of the plenitude of his power, he might lawfully dispense with the law, and accordingly granted, among other instances of this prerogative, dispensations from impediments of marriage to the emperor Otto IV. Similar indulgences were given by his successors, though they did not become usual for some ages. The fourth Lateran Council in 1215 removed a great part of the restraint, by permitting marriages beyond the fourth degree, or what we call third cousins; and dispensations have been made more easy, when it was discovered that they might be converted into a source of profit. . . . The *dispensing* power of the popes was exerted in several cases of a temporal nature, particularly in the legitimation of children, for purposes even of state.

Denoting a specific malady in dogs.

I should define *distemper* in the dog as a fever of a nature similar to typhus, and always characterised by the following symptoms, which generally occur in the order in which they are mentioned: There is first a dullness and restlessness, with partial appetite, heat and dryness of the nose, rapid but feeble pulse, dull eye, the white of which is generally streaked with dark-coloured blood-vessels. The dog seems extremely sensitive to cold, or to any other disagreeable sensation, as scolding, flogging, &c. The water is sentent and thick-coloured, with thirst; and the motions either very costive or loose, and little the latter, often of a pithy colour. The strength and flesh fail in a remarkably rapid manner, so that the dog is often unable to stand at the end of a few days or a week: the appetite is by that time entirely lost, and frequently the food which is given by force is speedily returned, or passes the bowels unchanged. The respiration generally becomes quicker than natural, though this symptom is not so universal as the others I have enumerated. In fact, all the processes of respiration, circulation, digestion, and secretion, are disturbed in a remarkable manner; and in this, I believe, is the essence of the disease; and the healthy resumption of these functions is always attended by convalescence. Such are the general and characteristic symptoms of *distemper*. *—Stonehouse, The Veterinary, p. 65.*

[From Latin *stringere*, to strain, to draw tight, Middle Latin *distringere* (whence French *distraindre* and English *distraint*) was used in the sense of exercising severity upon, correcting, and especially in that of compelling or constraining a person to do something by the exertion of a pledge or by fine or imprisonment. . . . In this sense we still speak of *distraint* for rent, when we seize the goods of a tenant, in order to compel him to pay the rent. The pledge or the fine exacted was termed *distraictio*, *distraict*, and the same name was sometimes given to the right of exercising judicial authority. '*Distraictio* quousque villas et ecclesias pertinet, ita ut Godescalcus qui adveniens est ejusdem alodii, medietaem ipsius *distraictio* de Ecclesia tenet.' (Charta an. 1124.) But the right of exercising such authority, as well as the territory over which it was exercised, were more commonly termed *distraictus*, Italian *distretto*, Old French *destroit*, English *district*. 2. In *Logic*. See *Distributed*.

**Distributed.** *part. adj.* [the special and technical import of this word, as given in the chief works on *Logic*, is by no means clearly connected with its derivation; and that influential logicians have not scrupled to say so may be seen in the extract from De Morgan.]

1. Universal.

A term is said to be *distributed* when it is taken universal, so as to stand for everything it is capable of being applied to. - *Whately, Elements of Logic*, i. § 5.

The middle-term . . . must be *distributed* once, at least, in the premises; (i.e. by being the subject of an universal, or predicate of a negative, and once is sufficient; since if one extreme has been compared to a part of the middle-term, and another to the Whole of it, they must have been both compared to the same. No term must be *distributed* in the conclusion which was not *distributed* in one of the premises; for that (which is called an illicit process, either of the major or the minor term) would be to employ the Whole of a term in the conclusion, when you had employed only a part of it in the premises; and thus, in reality, to introduce a fourth term: e.g.

'All quadrupeds are animals.  
A bird is not a quadruped; therefore

It is not an animal.' - Illicit process of the major. Again, 'What is related in the Talmud is unworthy of credit; miraculous stories are related in the Talmud; therefore miraculous stories are unworthy of credit.' If this conclusion be taken as A [an universal affirmative proposition], there will be an

'illicit process of the minor-term; (since every one would understand the minor-premise as particular) but a particular conclusion may fairly be inferred. In the case of an illicit process of the major, on the contrary, the premises do not warrant any conclusion at all. . . . By these six rules all categorical syllogisms are to be tried; and from them it will be evident that nothing can be proved from two particular premises; (since you will then have either the middle term *undistributed*, or an illicit process. For if each premise were I [a particular affirmative proposition], there would be no distribution of any term at all; and if the premises were I and O [a particular negative proposition], as

'Some animals are sagacious;  
Some beasts are not sagacious;  
Some beasts are not animals.'

there would be but one term, the predicate of O - *distributed*; and supposing that one to be the middle-term, then, the conclusion (being of course negative) would have its predicate, the major term - *distributed*, which was *undistributed* in the premises. And, for the same reason, viz., that if one of the premises be particular, the conclusion must be particular; e.g.

'All who fight bravely deserve reward;  
Some soldiers fight bravely; you can only infer that

'Some soldiers deserve reward'; for to infer a universal conclusion would be an 'illicit process of the minor.' - *Ibid.* ii. § 2.

I will here take the liberty to remark, though not closely connected with the present subject, that Archbishop Whately is not quite right in saying that in affirmative propositions the predicate is never *distributed*; besides the numerous instances where this is, in point of fact, the case, all which he justly excludes, there are many in which it is in-

voled in the very form of the proposition. Such are those which assert identity or equality, and such are all definitions. Of the first sort are all the theorems in geometry, asserting an equality of magnitudes or ratios, in which the subject and predicate may always change places. It is true that in the instance given in the work quoted, that equilateral triangles are equilateral, the converse requires a separate proof, and so in many similar cases. But in these the predicate is not *distributed* by the form of the proposition; they assert an equality of magnitude. The position, that where such equality is affirmed, the predicate is not logically *distributed*, would lead to the consequence that it can only be converted into a particular affirmation. A critic upon the first edition has observed, that nothing is clearer than that in these propositions the predicate is not necessarily *distributed*, and even hints a doubt whether I understood the terms rightly. This suspicion of my ignorance as to the meaning of the two commonest words in logic, I need not probably repeat; as to the peremptory assertion of this critic, without any proof beyond his own authority, that in propositions denoting equality of magnitude, the predicate is not necessarily *distributed*, if his own reflections do not convince him, I can only refer him to Aristotle's words: *in omni y eoque crase*; and I presume he does not doubt that in identical propositions of the form, A est A, the *distribution* of the predicate, which is the same thing, is manifest. - *Holm, Introduction to the Literature of Europe*, pt. iii. ch. iii. § 130, note.

The comparison of each of the two terms must be equally with the whole, or with the same part of the third term, and to secure this, (1) either the middle term must be *distributed* in one premise, at least, or (2) the two terms must be compared with the same specified part of the middle, or (3), in the two premises taken together, the middle must be *distributed*, and something more, though not *distributed* in either singly. - *Thomson, Outline of the Laws of Thought*, § 39.
